Description:	Displays the limit value for the integral component of the Isd current controller.		

2 Parameters

2.2 List of parameters

p1726[0...n]	Precontrol filter numerator natural frequency / Prectr_filt fn_num		
HLA	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4970
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]
Description:	Sets the numerator natural frequency for the precontrol filter (general filter).		
Dependency:	Refer to: p1721		
Note:	The pre-control filter is activated via p1721.0 and parameterized via p1722 ... p1727.		
p1726[0...n]	Quadrature arm decoupling scaling / Transv_decpl scal		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200.0 [%]	75.0 [%]
Description:	Sets the scaling of the quadrature arm decoupling		
Note:	This parameter is ineffective for sensorless vector control. In this case, p1727 is always used. If p1726 is set to 0, then the quadrature de-coupling is deactivated. The integral component of the Isd current controller remains effective in the complete speed control range. For the closed-loop control of synchronous motors, this parameter is used to scale the current controller de-coupling.		
p1727[0...n]	Precontrol filter numerator damping / Prectrl_filt D_num		
HLA	Can be changed: U, T	Calculated: -	Access level: 3

	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.025
Description:	Defines the gain of the controller for resonance damping for operation with sensorless vector control in the range that current is injected.		

p1744[0...n]	Motor model speed threshold stall detection / MotMod n_thr stall		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: SESM, REL Min 0.00 [rpm]	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 100.00 [rpm]
Description:	Sets the speed threshold value to detect a stalled motor. If the adaptation controller output exceeds the parameterized speed difference, then in status word r1408.11 is set = 1.		
Dependency:	If a stalled drive is detected (r1408.11 = 1), fault F07902 is output after the delay time set in p2178. Refer to: p2178		
Note:	Speed monitoring is only effective in operation with a speed encoder (refer to p1300). Stalling is also identified if steps/jumps occur in the speed signal, which exceed the value in p0492.		
p1745[0...n]	Motor model error threshold stall detection / MotMod ThreshStall		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.0 [%]	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 5.0 [%]
Description:	Sets the fault threshold in order to detect a motor that has stalled. If the error signal (r1746) exceeds the parameterized error threshold, then status signal r1408.12 is set to 1.		
Dependency:	If a stalled drive is detected (r1408.12 = 1), fault F07902 is output after the delay time set in p2178. Refer to: p2178		
Note:	Monitoring is only effective in the low-speed range (below p1755 * (100% - p1756)).		
r1746	Motor model error signal stall detection / MotMod sig stall		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Signal to initiate stall detection		
Note:	The signal is not calculated while magnetizing and only in the low speed range (below p1755 * (100 % - p1756)).		
p1748[0...n]	Motor model lower changeover speed n_set -> n_act / MotMod low n_chng		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, REL Min 0.0 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 90.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 50.0 [%]
Description:	Sets the lower speed for the transition "n_set -> n_act" in encoderless operation. This value is entered as a percentage referred to p1749.		
Dependency:	Refer to: p1749, p1752		

p1749[0...n]	Motor model upper changeover speed / increase changeover speed / Up/incr n_chngov		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: PMSM, REL Min 0.0 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 99.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 50.0 [%]
Description:	<p>Separately excited synchronous motor: Sets the upper speed for the transition "n_set -> n_act" in sensorless operation. This value is entered as a percentage of p1755. Induction motor without speed encoder: Depending on the machine data, the drive has calculated a minimum value of the operating frequency for rugged operation. If the minimum value is greater than the lower changeover limit parameterized with p1755 * (1 - 2 * p1756), then the difference is displayed using p1749 * p1755. The parameter value cannot be changed.</p>		
Dependency:	Refer to: p1748, p1752, p1755, p1756		

p1750[0...n]	Motor model configuration / MotMod config				
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: Unsigned8 P-Group: Closed-loop control Not for motor type: SESM, REL Min -	Calculated: CALC_MOD_LIM_REF Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 0000 bin		
Description:	<p>Sets the configuration for the motor model. Bit 0 = 1: Forces open-loop speed-controlled starting (ASM). Bit 1 = 1: Forces the system to pass through frequency zero, open-loop-controlled (ASM). Bit 2 = 1: Drive remains in full closed-loop control mode, even at zero frequency (ASM). Bit 3 = 1: Motor model evaluates the saturation characteristic (ASM). Bit 4 = 1: Time-controlled change between current and observer models (ASM). Bit 5 = 1: HF signal injection to estimate the continuous rotor position (PMSM). Bit 6 = 1: If the motor is blocked, sensorless vector control remains speed-controlled (ASM). For a stalled (blocked) synchronous motor (PMSM), the encoderless vector control remains open-loop speed controlled. Bit 7 = 1: Use rugged switchover limits to switchover the model between open-loop and closed-loop controlled operation (ASM).</p>				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Controlled start	Yes	No	-
	01	Controlled through 0 Hz	Yes	No	-
	02	Closed-loop ctrl oper. down to zero freq. for passive loads	Yes	No	-
	03	Motor model Lh_pre = f(PsiEst)	Yes	No	-
	04	Model changeover	Time controlled	Freq. controlled	-
	05	Closed-loop ctrl mode PMSM up to f=0Hz with HF signal injection	Yes	No	-
	06	Closed-/open-loop controlled when motor is blocked	Yes	No	-
	07	Use rugged changeover limits	Yes	No	-

Caution:

Do not use bit 6 = 1 if the motor can be slowly reversed by the load at the torque limit. Long delay times due to blocking (p2177 > p1758) can cause the motor to stall. In this case you should deactivate the function or use closed-loop control throughout the speed range (note the information re bit 2 = 1).

Note: Bit 0 ... 3 only have influence for sensorless vector control, bit 4 only for vector control with encoder. Bit 2 is pre-assigned depending on p0500.

For bit 2 = 1:
The sensorless vector control is effective down to zero frequency. A change is not made into the open-loop speed controlled mode.
This operating mode is possible for passive loads. These include applications where the load itself does not generate any active torque and therefore only acts reactively to the drive torque of the induction motor.
If bit 2 = 1, then bit 3 is automatically set to 1. Manual de-selection is possible and may be sensible if the saturation characteristic (p1960) was not measured for third-party motors. Generally, for standard SIEMENS motors, the already pre-assigned (default value) saturation characteristic is adequate.
When the bit is set, the selection of bits 0 and 1 is ignored.

For bit 2 = 0:
If the model feedback is deactivated (p1784 = 0), with bit 2 = 0, then bit 3 is also automatically set to 0.

For bit 5 = 1:
The selection of HF signal injection is only relevant for permanent-magnet synchronous motors (PMSM). Therefore, activation of bit 5 is only possible outside of motor commissioning (p0010 = 0).
In order to achieve user-friendly configuration of the power unit components in the oversampling mode, when activated for the first time, initially p1810.3 is set, and then an automatic system boot is initiated. This is only possible if all of the axes connected to the Control Unit are switched off (refer to the setting conditions for p0009); otherwise, it is not possible to set the bit.
When deactivating p1750.5, p1810.3 remains unchanged and the system does not boot again.
Therefore, to reverse configure the power unit components from the oversampling mode (after manually deselecting p1750 bit 5) then initially p1810 bit 3 must be manually deleted and then a manual warm restart initiated.
As an alternative to a warm restart: save the parameters and carry out a POWER ON (switch-off/switch-on).
When the function "safety without encoder" (p9306/p9506) is activated, this setting is not permissible and results in monitoring errors.

For bit 6 = 1:
The following applies for encoderless vector control of induction motors:
For a blocked motor (see p2175, p2177) the time condition in p1758 is bypassed and a change is not made into open-loop controlled operation.
The following applies for encoderless vector control of synchronous motors:
For a blocked motor (see p2175, p2177), the speed ramp-function generator is held in open-loop speed controlled operation, and a change is not made into closed-loop controlled operation.

For bit 7 = 1:
The following applies for encoderless vector control of induction motors:
If the changeover limits are parameterized too low (p1755, p1756), then they are automatically increased to rugged values by the absolute amount $p1749 * p1755$.
The effective time condition for changing over into open-controlled operation is obtained from the minimum of p1758 and $0.5 * r0384$.
Activation can make sense for applications that demand a high torque at low frequencies and therefore low speed gradients.
Adequate parameterization must be ensured (p1610, p1611).

r1751		Motor model status / MotMod status			
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3

21	Motor blocked (RFG stop) PMSM	No	Yes	-

Note:

PMSM: permanent-magnet synchronous motor

For bit 17:

Displays the enabled status of the rugged model feedback (p1784).

The feedback is used to increase the parameter ruggedness of the motor model and is effective in the operating range of the two-component closed loop current control.

For bit 18:

Displays the status when enabling the differential current feedback in the current model for operation with encoder.

The function is automatically enabled with p1784 > 0 or p1731 > 0.

The feedback is used for a rugged change between the current model and complete machine model with active rugged model feedback and combination current.

For bit 19:

Displays the currently active stator circuit feedback in current model operation.

For bit 20:

Displays the currently effective increase of the changeover limits by the value p1749 * p1755.

For bit 21:

For a blocked synchronous motor, the speed ramp-function generator is held in the open-loop speed controlled operating range if the torque setpoint reaches the torque limit and the speed is less than the threshold value in p2175.

Description:	Sets the speed to change over the motor model for operation with encoder.		
Dependency:	In U/f characteristic mode the parameter is of no significance. Using the friction characteristic for operation with encoder: When changing the motor model changeover speed p1752, the points along the friction characteristic should be recalculated (p0340 = 5) and the friction characteristic recorded again (p3845). For slight changes, only the associated friction characteristic points must be recorded (see p3844). Refer to: p1756		
p1753[0...n]	Motor model changeover speed hysteresis operation with encoder / MotMod n_chgovHysE		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	90.0 [%]	0.0 [%]
Description:	Sets the hysteresis for the changeover speed of the motor model for operation with speed encoder.		
Dependency:	Refer to: p1752		
Note:	The value refers to p1752. In the case of separately excited synchronous motors, the lower hysteresis value is calculated with $p1752 * p1753$; in the case of all other types of motor, $p1752 * (1 - p1753)$ is used.		
p1754[0...n]	Flux angle difference smoothing time / Angle diff T_smoth		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6733
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.1 [ms]	10000.0 [ms]	5.0 [ms]
Description:	Sets the smoothing time constant to filter the main flux angle difference from the voltage and current models. The filtered value is included in the calculation of the total flux angle. PMSM: Sets the smoothing time constant to display the angular difference between the motor model an encoder.		

2 Parameters

2.2 List of parameters

Note: In the case of a separately excited synchronous motor (SESM) and sensorless vector control, the parameter must be set to the minimum value to improve motor model changeover.
PMSM: permanent-magnet synchronous motor
SESM: separately excited synchronous motor

p1755[0...n] Motor model changeover speed encoderless operation / MotMod n_chgSnsorl

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]

Description: Sets the speed to change over the motor model to encoderless operation.

Dependency: Refer to: p1756

Note: The changeover speed applies for the changeover between open-loop and closed-loop control mode.

p1755[0...n] Motor model changeover velocity encoderless operation / MotMod v_chgSnsorl

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	1000.00 [m/min]	1000.00 [m/min]

Description: Sets the velocity to change over the motor model to encoderless operation.

Dependency: Refer to: p1756

Note: The changeover velocity applies for the changeover between open-loop and closed-loop control mode.

p1755[0...n] Motor model changeover speed encoderless operation / MotMod n_chgSnsorl

VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]

Description: Sets the speed to change over the motor model to encoderless operation.

Dependency: In U/f characteristic mode the parameter is of no significance.

Refer to: p1749, p1756

Notice: The changeover speed represents the steady-state minimum speed up to which the motor model can be used in sensorless steady-state operation.

If the stability is not adequate close to the changeover speed, it may make sense to increase the parameter value.

Note: The changeover speed applies for the changeover between open-loop and closed-loop control mode.

p1756 Motor model changeover speed hysteresis / MotMod n_chgov hys

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	90.0 [%]	5.0 [%]

Description: Sets the hysteresis for the changeover speed/velocity of the motor model.

Dependency: Refer to: p1752, p1755

Note: The value is entered relative to p1404, p1752 or p1755.

p1756	Motor model changeover velocity hysteresis / MotMod v_chgov hys		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	90.0 [%]	5.0 [%]
Description:	Sets the hysteresis for the changeover speed/velocity of the motor model.		
Dependency:	Refer to: p1752, p1755		
Note:	The value is entered relative to p1404, p1752 or p1755.		
p1756	Motor model changeover speed hysteresis encoderless operation / MotMod n_chgov hys		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6730, 6731, 6732, 6733
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	95.0 [%]	50.0 [%]
Description:	Sets the hysteresis for the changeover speed of the motor model for encoderless operation. In the case of separately excited synchronous motors, the lower hysteresis value is calculated with $p1756 * p1755$; in the case of all other types of motor, $p1755 * (1 - p1756)$ is used.		
Dependency:	In U/f characteristic mode the parameter is of no significance. Refer to: p1755		
Note:	The parameter value refers to p1755. In the case of separately excited synchronous motors, the lower hysteresis value is calculated with $p1755 * p1756$; in the case of all other types of motor, $p1755 * (1 - p1756)$ is used.		
p1757[0...n]	Motor model w/o enc. op./cl.-loop controlled stab. controller Kp / MotMod w/o enc Kp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.01	10.00	0.70
Description:	Sets the gain of the transient response controller when the motor model changes over from open-loop controlled operation to closed-loop controlled operation.		
Note:	Only for ASM and PSM in encoderless operation: The settling range starts at $0.5 * p1755 * p1756$. For ASM it ends at $p1755 * p1756$ or at p1755, if p1759 is at the maximum value. For PSM it always ends at $p1755 * p1756$.		
p1758[0...n]	Motor model changeover delay time closed/open-loop control / MotMod t_cl_op		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	100 [ms]	10000 [ms]	1000 [ms]
Description:	Sets the minimum time for falling below the changeover speed when changing from closed-loop controlled operation to open-loop controlled operation.		

2 Parameters

2.2 List of parameters

Dependency: The wait time has no significance if the setpoint speed before the ramp-function generator lies in the open-loop speed controlled operating range. In this case, the change is made without any delay.

Refer to: p1755, p1756

Note: If p1758 is changed, commissioning must be selected in order to validate the value for the blocking monitoring.

p1759[0...n]	Motor model changeover delay time open/closed-loop control / MotMod t op_cl		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	2000 [ms]	0 [ms]
Description:	Sets the minimum time for a transition from open-loop controlled to closed-loop controlled operation after the lower changeover speed $p1755 * (1 - p1756 / 100 \%)$ has been exceeded.		
Dependency:	Refer to: p1755, p1756		
Note:	With p1759 = 2000 ms, the delay time becomes ineffective and the model changeover is determined by the output frequency only (changeover for p1755).		

p1760[0...n]	Motor model with encoder speed adaptation Kp / MotMod wE n_ada Kp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	100000.000	1000.000
Description:	Sets the proportional gain Kp of the controller for speed adaptation with encoder		

p1761[0...n]	Motor model with encoder speed adaptation Tn / MotMod wE n_ada Tn		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	4 [ms]
Description:	Sets the integral-action time Tn of the controller for speed adaptation with encoder		

r1762[0...1]	Motor model deviation component 1 / MotMod dev comp 1		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6721, 6730, 6731
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Induction motor (ASM): Displays the referred imaginary system deviation for the adaptation circuit of the motor model. Permanent-magnet synchronous motor (PMSM): Displays the system deviation for speed adaptation. r1762[0]: Angular deviation [rad-el] of the estimated EMF. r1762[1]: Angular deviation [rad-el] of the low-level signal response for pulse technique.		
Index:	[0] = Deviation model 1 [1] = Deviation model 2		

r1763	Motor model deviation component 2 / MotMod dev comp 2		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Induction motor (ASM): Displays the referred real system deviation for the adaptation circuit of the motor model. Permanent-magnet synchronous motor (PMSM): Not used.		
p1764[0...n]	Motor model without encoder speed adaptation Kp / MotMod woE n_adaKp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6730
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	100000.000	1000.000
Description:	Sets the proportional gain of the controller for speed adaptation without encoder.		
r1765	Motor model speed adaptation Kp effective / MotM n_ada Kp act		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the effective proportional gain of the controller for the speed adaptation.		
p1766[0...n]	Motor model voltage model calculation enable / U_mod calc enab		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	90.0 [%]	50.0 [%]
Description:	Sets the speed to enable the voltage model to calculate the speed actual value. This value is entered as a percentage referred to p1752. For separately excited synchronous motors without encoder, the parameter is referred to p1748.		
Dependency:	Refer to: p1748, p1752		
p1767[0...n]	Motor model without encoder speed adaptation Tn / MotMod woE n_adaTn		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6730
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [ms]	200 [ms]	4 [ms]
Description:	Sets the integral time of the controller for speed adaptation without encoder		

2 Parameters

2.2 List of parameters

r1768	Motor model speed adaptation Vi effective / MotM n_ada Vi act
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: SESM, REL Min -
	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max -
	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the effective gain of the integral component of the controller for speed adaptation.
r1770	CO: Motor model speed adaptation proportional component / MotMod n_adapt Kp
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: SESM, REL Min - [rpm]
	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]
	Access level: 3 Func. diagram: 6730 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays the P component of the controller for speed adaptation.
r1771	CO: Motor model speed adaptation I comp. / MotMod n_adapt Tn
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: SESM, REL Min - [rpm]
	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]
	Access level: 3 Func. diagram: 6730 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays the I component of the controller for speed adaptation.
r1773[0...1]	Motor model slip speed / MotMod slip
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: SESM, REL Min - [rpm]
	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: - Max - [rpm]
	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays estimated (speed) signals of the motor model. r1773[0]: Displays the estimated (mechanical) slip of the motor model. r1773[1]: Displays the estimated input speed of the motor model.
Index:	[0] = Slip speed estimated [1] = Speed estimated
p1774[0...n]	Motor model offset voltage compensation alpha / MotMod offs comp A
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: PMSM, SESM, REL Min -5.000 [V]
	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5.000 [V]
	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [V]
Description:	Sets the offset voltage in the alpha direction; this compensates the offset voltages of the drive converter/inverter at low speeds. The value is valid for the rated (nominal) pulse frequency of the power unit.
Note:	The value is pre-set during the rotating measurement.

p1775[0...n]	Motor model offset voltage compensation beta / MotMod offs comp B		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-5.000 [V]	5.000 [V]	0.000 [V]
Description:	Sets the offset voltage in the beta direction; this compensates the offset voltages of the drive converter/inverter at low speeds. The value is valid for the rated (nominal) pulse frequency of the power unit.		
Note:	The value is pre-set during the rotating measurement.		
r1776[0...6]	Motor model status signals / MotMod status sig		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the internal status signals of the motor model: Index 0: Changeover ramp between current and voltage models Index 1: Changeover ramp for model feedback (only encoderless induction motors) Index 2: Changeover ramp for zero frequency range (only encoderless induction motors) Index 3: Transition ramp actual speed from speed setpoint to model value (SESM without encoder) Index 4: Speed controller enable (SESM without encoder) Index 5: Transition ramp between current and voltage models (SESM without encoder) Index 6: Transition ramp for EMF deviation at PLL input (PMSM without encoder)		
Index:	[0] = Changeover ramp motor model [1] = Changeover ramp model tracking [2] = Changeover ramp zero frequency encoderless ASM [3] = Changeover ramp actual speed SESM without encoder [4] = Enable speed controller SESM without encoder [5] = Changeover ramp motor model SESM without encoder [6] = Changeover ramp motor model PMSM without encoder		
Note:	Indices 3 through 5 are only relevant in the case of encoderless control of separately excited synchronous motors.		
r1778	Motor model flux angle difference / MotMod ang diff		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Induction motor (ASM): Displays the difference between the motor model flux angle and the transformation angle. Permanent-magnet synchronous motor (PMSM): Displays the angular difference between motor model and encoder.		
Dependency:	A setting for smoothing the display can be made using p1754.		
Notice:	The display only makes sense for corrected actual value inversion, encoder pulse number and pole pair number. Example: Moving in encoderless operation at a speed not equal to zero and without load. --> Check the sign of r0061 and r0063. If the sign is not equal, then change p0410.0. --> Check the stationary value of r0061 and r0063. If the value is not equal, change the encoder pulse number (p0408) or pole pair number (p0314).		

r1778 Motor model flux angle difference / MotMod ang diff					
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4		
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: REL	Scaling: p2005	Expert list: 1		
	Min	Max	Factory setting		
	- [°]	- [°]	- [°]		
Description:	Induction motor (ASM): Displays the difference between the motor model flux angle and the transformation angle. Permanent-magnet synchronous motor (PMSM): Displays the angular difference between motor model and encoder.				
Dependency:	A setting for smoothing the display can be made using p1754.				
r1779 Motor model absolute flux / MotMod abs flux					
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3		
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: PMSM, SESM, REL	Scaling: PERCENT	Expert list: 1		
	Min	Max	Factory setting		
	- [%]	- [%]	- [%]		
Description:	Displays the absolute value of the flux of the motor model.				
p1780[0...n] Motor model adaptation configuration / MotMod adapt conf					
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 0010 0000 bin		
Description:	Sets the configuration for the adaptation circuit of the motor model. Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation. Permanent-magnet synchronous motor (PMSM): kT				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	03	Select motor model PMSM kT adaptation	Yes	No	-
	05	Reserved	Yes	No	-
	07	Reserved	Yes	No	-
	08	Compensation voltage emulation error in the drive converter	Yes	No	-
	09	kT(iq) characteristic active	Yes	No	-
Caution:	For the PMSM kT adaptation (p1780.3) as well as the compensation of the voltage emulation error (p1780.8) and for the kT(iq) characteristic (p1780.9), the function module "Extended torque control" (r0108.1) should be activated.				
					
Note:	ASM: Induction motor PMSM: permanent-magnet synchronous motor				

p1780[0...n]	Motor/converter model adaptation configuration / MotMod adapt conf		
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0001 0010 1000 bin

Description: Sets the configuration for the adaptation circuit of the motor model.
Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation.
Permanent-magnet synchronous motor (PMSM): kT

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	03	Select motor model PMSM kT adaptation	Yes	No	-
	05	Reserved	Yes	No	-
	07	Reserved	Yes	No	-
	08	Compensation voltage emulation error in the drive converter	Yes	No	-
	09	kT(iq) characteristic active	Yes	No	-

Caution: For the PMSM kT adaptation (p1780.3) as well as the compensation of the voltage emulation error (p1780.8) and for the kT(iq) characteristic (p1780.9), the function module "Extended torque control" (r0108.1) should be activated.

Note:

ASM: Induction motor
PMSM: permanent-magnet synchronous motor
The kT adaptation is only active at a speed greater than the changeover speed with encoder (p1752).
The kT adaptation and the kT characteristic can be simultaneously selected.
For kT adaptation (p1780.3 = 1):
- the kT adaptation is only active at a speed greater than the changeover speed with encoder (p1752).
- beforehand, an identification of the voltage emulation error must be started (p1909.14 = 1).
- if the electrical configuration (e.g. Motor Module, cable routing) or the pulse frequency (p1800) changes, then a new identification run must be carried out.
- To identify the voltage emulation error the Motor Module should still be warm.
- the motor temperature (r0035) should not change significantly (i.e. it should not be identified immediately after a load duty cycle).
For kT(iq) characteristic (p1780.9 = 1):
- for the kT(iq) characteristic $kT(iq) = kT + kT3 * iq^2 + kT5 * iq^4 + kT7 * iq^6$ the parameters must first be identified (p1959.6 = 1) (kT: p0316, kT3: p0646, kT5: p0647, kT7: p0647).

p1780[0...n]	Motor model adaptation configuration / MotMod adapt conf		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0111 1100 bin

Description: Sets the configuration for the adaptation circuit of the motor model.
Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation.
Permanent-magnet synchronous motor (PMSM): kT

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	01	Select motor model ASM Rs adaptation	Yes	No	-
	02	Select motor model ASM Lh adaptation	Yes	No	-
	03	Select motor model PMSM kT adaptation	Yes	No	-
	04	Select motor model offset adaptation	Yes	No	-
	05	Select ASM Rr adaptation (only with encoder)	Yes	No	-
	06	Select pole position identification PMSM encoderless	Yes	No	-
	07	Select T(valve) with Rs adaptation	Yes	No	-

2 Parameters

2.2 List of parameters

10	Filter time combination current like current ctrl integral time	Yes	No	-
11	Fast flying restart with voltage model for induction motor	Yes	No	-
12	Start PMSM sensorless with last angle	Yes	No	-
13	Fast pulsed pole position identification	Yes	No	-
14	Delay of the precontrol speed to the motor model	Yes	No	-
15	RESM Q flux model linear	Yes	No	-

Dependency:

In U/f characteristic operating mode, only bit 7 and bit 11 are relevant.
 For active motor model feedback (see p1784), the Lh adaptation is internally deactivated automatically.
 When the power units are connected in parallel with separate, offset motor winding systems (p7003 = 2), then the compensation of the valve interlocking times should be implemented as Rs adaptation (bit 7 = 1).

Caution:

Bit 11: The selection has not been enabled for output filters, with the exception of motor reactors (see p0230)

Notice:

It is only permissible to change bit 11 if the drive is switched off.
 When selecting bit 11, also for U/f characteristic operation, a standstill measurement must have been performed to set the necessary current controller for a fast flying restart.

Note:

ASM: Induction motor
 PMSM: permanent-magnet synchronous motor
 When selecting the compensation of the valve interlocking via Rs (bit 7), the compensation in the gating unit is deactivated and is instead taken into account in the motor model.
 In order that the correction values of the Rs, Lh and kT adaptation (selected using Bit 0 ... Bit 2) are correctly accepted when changing over the drive data set, a dedicated motor number must be entered into p0826 for each different motor.
 Bit 11 has no influence on flying restart with speed encoder. Depending on the motor, the fast flying restart is suitable for speeds of maximum 1.5x to 4x the rated motor speed.
 For bit 12 (only for synchronous motors and bit 6 = 1):
 The pole position identification is only carried out after power on and after the motor has coasted down. The switch-off speed p1226 should be as low as possible. If the power unit is switched off when the motor is stationary, then the next time that the power unit is switched on, the old angle is used as starting value. The precondition applies that while the power unit is switched off the motor does not rotate.
 The duration of the pole position identification is shortened using bit 13. As a consequence, the pole wheel angle error can be slightly greater.

p1784[0...n]

Motor model feedback scaling / MotMod fdbk scal

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	1000.0 [%]	0.0 [%]

Description:

Sets the scaling for model fault feedback.

Note:

Feeding back the measured model fault to the model states increases the control stability and makes the motor model rugged against parameter errors.
 When feedback is selected (p1784 > 0), Lh adaptation is not effective.

p1785[0...n]

Motor model Lh adaptation Kp / MotMod Lh Kp

Description:	Sets the proportional gain Kp for speed adaptation with active pulse technique for the estimation of the continuous rotor position.		

p1800[0...n]		Manipulated variable filter activation / ManVarFilt act												
HLA	Can be changed: U, T Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 4966 Unit selection: - Expert list: 1 Factory setting 0000 bin											
Description:	Setting for activating/deactivating the manipulated variable filter.													
Bit field:	<table border="1"> <thead> <tr> <th>Bit</th> <th>Signal name</th> <th>1 signal</th> <th>0 signal</th> <th>FP</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>Activate filter</td> <td>Yes</td> <td>No</td> <td>-</td> </tr> </tbody> </table>	Bit	Signal name	1 signal	0 signal	FP	00	Activate filter	Yes	No	-			
Bit	Signal name	1 signal	0 signal	FP										
00	Activate filter	Yes	No	-										
Dependency:	The manipulated variable filter is parameterized from p1801 and higher. Refer to: p1699, r1801, p1801, p1802, p1803, p1804, p1805													
p1800[0...n]		Pulse frequency setpoint / Pulse freq setp												
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 1.000 [kHz]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 32.000 [kHz]	Access level: 2 Func. diagram: 8021 Unit selection: - Expert list: 1 Factory setting 4.000 [kHz]											
Description:	Sets the pulse frequency for the converter. This parameter is pre-set to the rated converter value when the drive is first commissioned.													
Dependency:	The pulse frequency can, depending on the current controller sampling time (p0115[0]) assume the following values: a) $p1800 = 1000 / (p0115[0] * n)$ with $n = 2, 3, 4, 5$ b) $p1800 = 1000 * n / p0115[0]$ with $n = 1, 2, 3, 4, \dots$ Example: $p0115[0] = 125 \mu s \rightarrow p1800 = 1.6, 2, 2.6, 4 \text{ kHz}$ (from equation a) $p0115[0] = 125 \mu s \rightarrow p1800 = 8, 16 \text{ kHz}$ (from equation b) Possible setting values can be taken from r0114 (if p0009 = p0010 = 0). Refer to: r0110, r0111, p0112, p0113, r0114, p0115, p0230, p1817													
Note:	The maximum possible pulse frequency is also determined by the power unit being used. When the pulse frequency is increased, depending on the particular power unit, the maximum output current can be reduced (derating, refer to r0067). If p1800 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1800 have been changed by a parameter that was set when the drive was commissioned (e.g. p1082). For encoderless operation (p1404 = 0 or p1300 = 20), the following conditions apply: $p1800 = 1 / (n * p0115[0])$ with $n = 2, 3, 4$ or $p1800 \geq n / p0115[0]$, $n = 1, 2, \dots$ For motors with a low power rating (< 300 W) we recommend that p1800 is set acc. to the second condition. Although, pulse frequencies $p1800 = 1 / (n * p0115[0])$ with $n = 3$ or 4 are possible, for $p0115[0] > 62.5 \mu s$, they result in unsteady closed-loop control and should be avoided. For motors with a low leakage inductance, it is not permissible to set the pulse frequency to an excessively low value.													

p1800[0...n]	Pulse frequency setpoint / Pulse freq setp		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8021
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.000 [kHz]	16.000 [kHz]	4.000 [kHz]
Description:	Sets the pulse frequency for the converter. This parameter is pre-set to the rated converter value when the drive is first commissioned.		
Dependency:	The pulse frequency can, depending on the current controller sampling time (p0115[0]) assume the following values: $p1800 = 1000 / (p0115[0] * 2)$ or $p1800 = n * 1000 / p0115[0]$ with $n = 1, 2, 3, \dots$ Example: $p0115[0] = 250 \mu s \rightarrow p1800 = 2, 4, 8, 12, 16 \text{ kHz}$ Possible setting values can be taken from r0114 (if p0009 = p0010 = 0). If p0092 = 1 the sampling times p0115 and the pulse frequency p1800 are checked every time the parameters are downloaded, and reset to the initial values if necessary. This check can be deactivated by setting p0092 = 0 (making this setting does not affect isochronous PROFIBUS operation). The pulse frequency cannot be changed when motor data identification is active (p1910). If the pulse frequency is set asynchronously to the current controller sampling time (p1810.12), the following limit applies: $p1800 \leq 1000 * 2 / p0115[0]$ If wobulation is selected (p1810.2), the pulse frequency can only be changed as part of pulse enabling to values with the following ratio: a) $p1800 \leq 1000 / p0115[0]$ for $p1811 > 0 \%$ b) $p1800 \leq 1000 * 2 / p0115[0]$ for $p1811 = 0 \%$ Under pulse inhibit $p1800 > 1000 / p0115[0] \rightarrow p1811 = 0$ $p1800 > 1000 * 2 / p0115[0] \rightarrow p1810.2 = 0$ and $p1811 = 0$ (applicable for all indices) Refer to: r0110, r0111, p0112, p0113, r0114, p0115, p0230, p1817		
Notice:	The pulse frequency p1800 can also be asynchronously set to the current controller sampling time (0.05 kHz increment). To do this, p1810.12 must be set to 1 (secondary condition, see p1810). Effects: - switching over the gating unit (p1810.2). - activating the current actual value correction (p1840.0). - minimum pulse frequency $1000 * 0.5 / p0115[0]$. - maximum pulse frequency $1000 * 2 / p0115[0]$. - fluctuating deadtimes and dynamic performance in the current control loop. - increased level of current ripple in the current display.		
Note:	The maximum possible pulse frequency is also determined by the power unit being used. When the pulse frequency is increased, depending on the particular power unit, the maximum output current can be reduced (derating, refer to r0067). The maximum pulse frequency for operation with output reactors (see p0230) is 4 kHz for booksize and blocksize power units, for chassis power units it is twice the rated pulse frequency (2.5 kHz or 4 kHz). If a sine-wave filter is parameterized as output filter (p0230 = 3), then the pulse frequency cannot be set below the minimum value required for the filter. If an external sine-wave filter is parameterized, (p0230 = 4), then the minimum pulse frequency is calculated as follows: $f_{puls_min} = 1.6 / (2 * \pi * \sqrt{p0233 * p0234 * p0235})$, with p0233 in H and p0234 in F In this case, the pulse frequency must be a multiple of the inverse value of the current controller sampling time (p0115[0]). If a sine-wave filter is parameterized as output filter (p0230 = 3), then the pulse frequency cannot be changed below the minimum value required for the filter.		

If p1800 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1800 have been changed by a parameter that was set when the drive was commissioned (e.g. p1082).

p1801[0...n] Manipulated variable filter type / ManVarFilt type			
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 4966
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	2	1
Description:	Sets the manipulated variable filter as low pass (PT2) or as extended general 2nd order filter.		
Value:	1: PT2 low pass 2: General 2nd order filter		
Dependency:	The manipulated variable filter is activated via p1800.0 and parameterized via p1801 ... p1805. Refer to: p1800		
Note:	For an extended general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed. The denominator damping can be determined from the equation for the 3 dB bandwidth: $f_{3dB} \text{ bandwidth} = 2 * D_{denominator} * f_{bandstop} \text{ frequency}$		
r1801 Actual pulse frequency / Pulse freq act			
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [kHz]	- [kHz]	- [kHz]
Description:	Display and connector output for the actual converter switching frequency.		
Note:	The selected pulse frequency (p1800) may be reduced if the drive converter has an overload condition (p0290). The value can be displayed up to 12 current controller sampling times later than when it is actually effective, because it is not transferred in every current controller sampling time.		
r1801[0...1] CO: Pulse frequency / Pulse frequency			
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [kHz]	- [kHz]	- [kHz]
Description:	Display and connector output for the actual converter switching frequency.		
Index:	[0] = Actual [1] = Modulator minimum value		
Note:	The selected pulse frequency (p1800) may be reduced if the drive converter has an overload condition (p0290). The following applies for vector drives (p0107): The pulse frequency can also be reduced when changing over the modulator to an optimized pulse pattern. This is used to avoid overcontrol. In the case of chassis power units, two-thirds of the setpoint pulse frequency is displayed in the FLB modulation range.		

p1802[0...n]	Manipulated variable filter denominator natural frequency / ManVarFilt fn_den		
HLA	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4966
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]
Description:	Sets the denominator natural frequency for manipulated variable filter (PT2, general filter).		
Dependency:	The manipulated variable filter is activated via p1800.0 and parameterized via p1801 ... p1805. Refer to: p1800		
p1802[0...n]	Modulator mode / Modulator mode		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	19	0
Description:	Sets the modulator mode.		
Value:	0: Automatic changeover SVM/FLB 1: Flat top modulation (FLB) 2: Space vector modulation (SVM) 3: SVM without overcontrol 4: SVM/FLB without overcontrol 5: SVM with pulse frequency reduction 6: SVM/FLB with pulse frequency reduction 7: No edge modulation up to 100 Hz 8: No edge modulation up to 60 Hz 9: Edge modulation 19: Optimized pulse pattern		
Dependency:	If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), or if the power unit firmware is not able to calculate edge modulation (r0192.0 = 0), then only space vector modulation without overcontrol can be set as modulation type (p1802 = 3). For permanent-magnet synchronous motors and chassis power units, the following applies: Edge modulation or optimized pulse pattern can only be used, if p1810 bit 2 = 1 is set. Refer to: r0192, p0230, p7003		
Notice:	If the pulse patterns are enabled with overmodulation option (p1802 < 3) or edge modulation (p1802 > 6), then the current actual value correction is automatically activated (p1840.0 = 0).		
Note:	When modulation modes are enabled that could lead to overmodulation (p1802 = 0, 1, 2, 5, 6), the modulation depth must be limited using p1803 (default p1803 < 100 %). The higher the overmodulation, the greater the current ripple and torque ripple. When changing p1802[x], the values for all of the other existing indices are also changed. p1802 = 7, 8 should be used if the drive is operated below 100 Hz or 60 Hz, and it is necessary to avoid changing over to edge modulation. Above these output frequencies, the modulation depth remains limited so that there the full output voltage of the edge modulation is not reached. The setting p1802 = 19 is only released for chassis power units and SIMOTICS FD motors.		

p1802[0...n]	Modulator mode / Modulator mode

0000 0000 0000 0000 bin

Description:

Sets the configuration for the modulator.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	DC link voltage compensation in the power unit.	Yes	No	-
11	Current controller dynamics higher	Yes	No	-

2 Parameters

2.2 List of parameters

Note: For bit 11:
Prerequisite:
- firmware version 4.4 or higher for the Control Unit and power unit.
- booksize or S120 Combi power unit (r0192.27 = 1).
- current controller sampling time p0115[0] >= 62.5 µs.
- for a Double Motor Module the two drive controls must be operated with the same current controller sampling time (p0115[0]). Otherwise, the higher current controller dynamics can only be activated on the drive with the longer sampling time.
- it is not permissible that the "safety without encoder" is activated (p9306/p9506).
The following changes are necessary after changing bit 11:
- computing dead time (p0118 = 20.5 µs for bit 11 = 1, p0118 = 0 µs for bit 11 = 0).
- controller gains (p1715, p1460).
- with p0340 = 4 computing dead time and controller gains can be automatically pre-assigned. It may be necessary to still optimize the speed controller.
Before commissioning for the first time (p3925.0 = 0 for all data sets) this parameter is automatically pre-assigned to the optimum value.

p1810	Modulator configuration / Modulator config		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0010 bin

Description: Sets the configuration for the modulator.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Avg value filter for V_lim (only for Vdc_comp in modulator)	Yes	No	-
	01	DC link voltage compensation in the current control	Yes	No	-
	02	Wobulation activated	Yes	No	-
	03	Current measurement oversampling selected	Yes	No	-
	08	Pulse frequency reduction (speed dependent) stage 1	Yes	No	-
	09	Pulse frequency reduction (speed dependent) stage 2	Yes	No	-
	10	Activate pulse-locking/pulse-dropping function	Pulse-Dropping	Pulse-Locking	-
	12	Pulse freq. can be asynchronously set to curr. ctrl clock cycle	Yes	No	-
	13	Pulse freq. reduction before optimized pulse patterns for 500 µs	Yes	No	-
	14	Deactivate maximum angular difference adaptation	Yes	No	-
	15	Increase overmodulation range	Yes	No	-

Dependency: If bit 2 is set from 1 to 0, p1811 = 0 is set.

Notice: Bit 1 = 0 can only be set under a pulse inhibit and for r0192.14 = 1.

Bit 2 can only be set to 1 subject to the following prerequisites:

- Pulse inhibit
- r0192.16 = 1
- p1800 < 2 x 1000/p0115[0]

Bit 12 can only be changed subject to the following prerequisites:

- preconditions, the same as bit 2 = 1
- p1810.3 = 0

For fast current changes, bit 15 = 1 together with p1802 = 0, 2 and p1803 > 106 % result in a significant increase in the torque ripple. As a consequence, increasing the modulation limit must be checked on an application for application basis.

Note:

For bit 00 = 0:

Voltage limitation from the minimum of the DC link voltage (lower ripple in the output current, reduced output voltage).

For bit 00 = 1:

Voltage limitation from averaged DC link voltage (higher output voltage with increased ripple in the output current).

The selection is only valid if the DC link compensation is not performed in the Control Unit (bit 1 = 0).

For bit 01 = 0:

DC link voltage compensation in the modulator.

For bit 01 = 1:

DC link voltage compensation in the current control.

For bit 02 = 0:

A gating unit that does not permit wobulation is used.

Edge modulation is not possible for a parallel connection with a single-winding system (p7003 = 0).

Bit 02 cannot be set to 0 if bit 12 = 1.

For bit 02 = 1:

A gating unit that permits wobulation is used.

For a wobulation amplitude $p1811 = 0$, the maximum possible pulse frequency in $p1800 = 2 \times 1000 / p0115[0]$.

For a wobulation amplitude $p1811 > 0$, the maximum possible pulse frequency in $p1800 = 1000 / p0115[0]$.

If optimized pulse patterns has been activated ($p1802 > 6$), then a parameter save is required and switch off and switch on again. This is displayed using a message (F01040).

For bit 03 = 1:

The actual current value sensing and the determination of the valve ON times takes place with a double current controller clock cycle and phase offset.

The activation is only possible with $r0192.23 = 1$ and $p1810.12 = 0$ - and takes effect the next time the system is powered up.

For bit 08 = 1:

Above the frequency threshold $r1836[0]$, the pulse frequency is switched to the value in $p1800$. Below $r1836[0]$ (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency (see $r0114$).

For bit 09 = 1:

Above the frequency threshold $r1836[1]$, the pulse frequency is increased to the next possible value. Below $r1836[1]$ (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency.

If bit 8 is set to 0, bit 9 is automatically reset.

For bit 10 = 0:

Pulse-locking function activated.

For bit 10 = 1:

Pulse-dropping function activated.

For bit 12 = 0:

The pulse frequency $p1800$ can also be synchronously set to the current controller clock cycle (see $r0114$).

Bit 12 can only be set from 1 to 0 if the pulse frequency $p1800$ is set synchronously to the current controller clock cycle. In this case, the gating unit is not switched over.

For bit 12 = 1:

The pulse frequency $p1800$ can also be asynchronously set to the current controller clock cycle. In this case, the effects should be observed (see $p1800$).

If bit 12 is set to 1, then the gating unit is automatically switched over ($p1810.2 = 1$). If this is not possible (see above), then bit 12 cannot be set to 1.

Bit 12 cannot be set to 1, if $p1810.3 = 1$ is set.

For bit 15 = 1:

For $p1802 = 0, 2$ and $p1803 > 106\%$, dynamically, a modulation depth of more than 106% is permitted. When $p1803$ is increased, the dynamic modulation depth reserve $p1574$ should be increased so that the maximum output voltage $r0071$ approximately remains the same. For U/f control, the overcontrol in $p1381$ can be separately reduced.

2 Parameters

2.2 List of parameters

	12	Pulse freq. can be asynchronously set to curr. ctrl clock cycle	Yes	No	-

13	Compute software gating unit on Control Unit	Yes	No	-
14	Activate optimized pulse pattern	Yes	No	-
15	Activate flat-top modulation	Yes	No	-

Dependency:

If bit 2 is set from 1 to 0, p1811 = 0 is set.

Notice:

Bit 02 = 1 can only be set subject to the following prerequisites:

- Pulse inhibit
- r0192.16 = 1
- $p1800 < 2 \times 1000/p0115[0]$

Bit 5, bit 14 and bit 15 can only be changed subject to the following prerequisites:

- Pulse inhibit

Note:

For bit 02 = 0:

A gating unit that does not permit wobulation is used.

For bit 02 = 1:

A gating unit that permits wobulation is used.

For pulse frequency wobulation with an amplitude equal to zero ($p1811 = 0$), the maximum possible pulse frequency in $p1800 = 2 \times 1/\text{current controller sampling time } (p0115[0])$.

For a wobulation amplitude greater than zero ($p1811 > 0$), the maximum possible pulse frequency in $p1800 = 1/\text{current controller sampling time } (p0115[0])$.

For bit 04 = 0 (only valid for bit 2 = 1):

The pulse frequency wobulation amplitude ($p1811$) is enabled.

For bit 04 = 1 (only valid for bit 2 = 1):

The pulse frequency wobulation amplitude ($p1811$) is disabled.

For bit 05 = 1:

Only permissible for r0192.19 = 1.

For bit 10 = 0:

The pulse-locking function is activated.

For bit 10 = 1:

The pulse-dropping function is activated.

For bit 12 = 0 (only valid for bit 13 = 1):

The pulse frequency cannot be adjusted asynchronously to the current controller frequency ($p1800$)

For bit 12 = 1 (only valid for bit 13 = 1):

The pulse frequency can be adjusted asynchronously to the current controller frequency ($p1800$)

For bit 14 = 0 (only valid for bit 13 = 1):

Optimized pulse patterns are not used.

For bit 14 = 1 (only valid for bit 13 = 1):

Optimized pulse patterns are used.

For bit 15 = 0:

To deactivate flat-top control mode, p3400.1 also needs to be set to 0.

For bit 15 = 1:

Flat-top control mode is active regardless of the setting for p3400.1.

	Min	Max	Factory setting	
	-	-	0001 bin	
Description:	Sets bit 0 for recording the power unit in the subgroup for the "offset clocking".			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Recording in subgroup for offset clocking	Yes	No
				FP
				-
Dependency:	Refer to: p1818, p1819			
Note:	A change only becomes effective after booting.			
	If one of the following secondary conditions is not fulfilled, then none of the power units from the subgroup are clocked with an offset.			

Secondary conditions for clocking with an offset:

- the PWM frequency (p1800[D]) of all power units in the subgroup must be the same.
- the PWM frequency (p1800[D]) must be the same in all drive data sets in the subgroup.
- the following must apply for the ratio between the PWM cycle (1/p1800[D]) and the current controller cycle (p0115[0]):

The ratio (1/p1800[D]) / (p0115[0]) must be an even integer number (2, 4, 6, ...) for all power units in the subgroup.

or

The ratio (p0115[0]) / (1/p1800[D]) must be an integer number (1, 2, 3, ...) for all power units in the subgroup.

p1816	Set phase for PWM generation manually / Set Ph for PWM		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF	Can be changed: U, T Data type: Integer16 P-Group: Modulation Not for motor type: -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting
	Min -1	Max 16	Factory setting -1
Description:	Sets manual setting and overwriting of automatically determined phase shift for "offset clocking". For p1816 = -1, the following applies: Automatic mode. The phase shift value is automatically determined. For p1816 = 0 ... 16, the following applies: Manual mode. The user should define the phase shift value as follows: 1. PWM cycle (1/p1800) > current controller cycle (p0115[0]) The power unit executes a phase shift from Tshift = current controller cycle (p0115[0]) * p1816. 2. PWM cycle (1/p1800) <= current controller clock cycle (p0115[0]) For p1816 >= 1, the power unit executes a phase shift from Tshift = PWM cycle/2.		
Dependency:	Refer to: r0116, p1800, p1819		
p1817	Minimum ratio, pulse frequency to the output frequency / Min f_puls / f_max		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(2) Data type: FloatingPoint32 P-Group: Converter Not for motor type: -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting
	Min 8.3	Max 15.0	Factory setting 12.0
Description:	Sets the minimum ratio between the pulse frequency and the output frequency.		
Notice:	If the ratio between the pulse frequency and the output frequency is reduced, then oscillations can occur in the output current that can result in significant levels of current ripple with the appropriate negative effects.		
Note:	When the maximum speed is changed, the pulse frequency p1800 is automatically limited to this minimum ratio. It is not permissible to reduce the pulse frequency if this would result in this ratio being undershot.		
p1818	Phase for PWM generation configuration / Ph for PWM config		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: T Data type: Integer16 P-Group: Modulation Not for motor type: -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting
	Min 0	Max 1	Factory setting 1
Description:	Sets the phase shift for offset clocking. For the first active power unit, it is specified whether clocking is to start at 0° (value = 0) or 180° (value = 1). All other active power units are clocked alternately according to the setting made here.		
Dependency:	Refer to: p1819		
Note:	A change only becomes effective after a POWER ON. The parameter is not influenced by setting the factory setting.		

2 Parameters

2.2 List of parameters

p1819	Phase for PWM generation / Ph for PWM		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, S_INF	Can be changed: U, T Data type: Integer16 P-Group: Modulation Not for motor type: - Min -1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -1
Description:	Display for "offset clocking". Depending on the particular case, the value is interpreted differently: Case 1: The PWM clock cycle (1/p1800[D]) is greater than the current controller clock cycle (p115[0]) and the ratio between the PWM clock cycle and the current controller clock cycle and is an integer and even multiple of it (e.g. p0115[0] = 125 µs, p1800[D] = 4 kHz, 2 kHz, 1 kHz). The value displayed refers to: - the phase shift in the current-controller cycles to be executed by the power unit. Case 2: The PWM clock cycle (1/p1800[D]) is less than or equal to the current controller clock cycle (p0115[0]) and the ratio between the current controller clock cycle and the PWM clock cycle is an integer and even multiple of it (e.g. p0115[0] = 125 µs, p1800[D] = 8 kHz, 16 kHz). The value 1 displayed means that: - the power unit is to apply a phase shift of 180 ° (from the PWM cycle). A value of 0 displayed on all power units of the drive line-up means the following: - the general conditions of the "offset clocking" (see p1815) are not fulfilled, i.e. no power unit is clocked with an offset.		
Dependency:	Refer to: p0108, r0108, p0115, p1800, p1815, p1816, p1818		
Note:	For reasons of compatibility, the parameter is an adjustable parameter. However, it functions solely as a display parameter. This means that factory setting -1 no longer has any significance and is only available for reasons of compatibility.		

p1819	Phase for PWM generation / Ph for PWM		
A_INF, R_INF	Can be changed: U, T Data type: Integer16 P-Group: Modulation Not for motor type: - Min -1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Display for "offset clocking". Depending on the particular case, the value is interpreted differently: Case 1: The PWM clock cycle is greater than the current controller clock cycle (p0115[0]) and the ratio between the PWM clock cycle and the current controller clock cycle and is an integer and even multiple of it (e.g. p0115[0] = 125 µs, pulse frequency = 4 kHz, 2 kHz). The value displayed refers to: - the phase shift in the current-controller cycles to be executed by the power unit. Case 2: The PWM clock cycle is less than or equal to the current controller clock cycle (p0115[0]) and the ratio between the current controller clock cycle and the PWM clock cycle is an integer and even multiple of it (e.g. p0115[0] = 125 µs, pulse frequency = 8 kHz, 16 kHz). The value 1 displayed means that: - the power unit is to apply a phase shift of 180 ° (from the PWM cycle). A value of 0 displayed on all power units of the drive line-up means the following: - the general conditions of the "offset clocking" (see p1815) are not fulfilled, i.e. no power unit is clocked with an offset.		
Dependency:	Refer to: p0108, r0108, p0115, p1800, p1815, p1816, p1818		

Note: For reasons of compatibility, the parameter is an adjustable parameter. However, it functions solely as a display parameter. This means that the minimum value -1 no longer has any significance and is only available for reasons of compatibility.

p1820[0...n]	Invert output voltage / U_output inv		
HLA	Can be changed: C2(3)	Calculated: CALC_MOD_CON	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 4966
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to invert the output voltage. This means that with the same setpoint, the piston direction is reversed without reversing the encoder actual value. When a velocity encoder is being used, it may be necessary to also invert the encoder actual value (p0410).		
Value:	0: OFF 1: ON		
Note:	This setting can only be changed when the controller is inhibited.		

p1820[0...n]	Reverse the output phase sequence / Outp_ph_seq rev		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(3)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6732
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the phase sequence reversal for the motor. If the motor does not rotate in the required direction, then the output phase sequence can be reversed using this parameter. This means that with the same setpoint, the motor direction is reversed without reversing the encoder actual value. When a speed encoder is being used, it may be necessary to also invert the encoder actual value (p0410).		
Value:	0: OFF 1: ON		
Dependency:	Refer to: p1821		
Caution:	For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15. Changing the direction using p1820 or p1821 is not recognized by the "Safe Direction without encoder". As a consequence, the limit provided by SDI (Safe Direction) from r9733 no longer functions.		
			
Note:	This setting can only be changed when the pulses are inhibited. p1821 can be used to reverse the phase sequence and encoder actual value.		

p1821[0...n]	Direction / Direction		
HLA	Can be changed: C2(3)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to change the direction. If the parameter is changed, it reverses the direction of rotation of the cylinder and the encoder actual value without changing the setpoint.		
Value:	0: CW 1: CCW		
Dependency:	Refer to: F07434		
Caution:	Changing the direction using p1820 or p1821 is not recognized by the "Safe Direction without encoder". As a consequence, the limit provided by SDI (Safe Direction) from r9733 no longer functions.		
			

2 Parameters

2.2 List of parameters

- Notice:** For a drive data set changeover with differently set direction and power enable, an appropriate fault is output. The piston must be recalibrated after a direction reversal.
- Note:** The actual velocity (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).
- p1820 can be used to reverse the direction of the cylinder without reversing the encoder actual value.

p1821[0...n]	Dir of rot / Dir of rot	Calculated: -	Access level: 3
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(3) Data type: Integer16 P-Group: Motor Not for motor type: - Min 0	Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1	Func. diagram: 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732 Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting to change the direction of rotation. If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.		
Value:	0: CW 1: CCW		
Dependency:	Refer to: F07434		
Caution:	Changing the direction using p1820 or p1821 is not recognized by the "Safe Direction without encoder". As a consequence, the limit provided by SDI (Safe Direction) from r9733 no longer functions.		
			
Notice:	An appropriate fault is output for a drive data set changeover where the direction of rotation changes and the pulses are enabled.		
Note:	For operation with the phase sequence U/V/W, the direction of rotation is defined when viewing the face side of the motor output shaft. When changing the direction of rotation, the rotating field direction of the current controller is reversed. The speed actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).		

p1821[0...n]	Direction / Direction	Calculated: -	Access level: 3
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(3) Data type: Integer16 P-Group: Motor Not for motor type: - Min 0	Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1	Func. diagram: 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732 Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting to change the direction. If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.		
Value:	0: CW 1: CCW		
Dependency:	Refer to: F07434		
Caution:	Changing the direction using p1820 or p1821 is not recognized by the "Safe Direction without encoder". As a consequence, the limit provided by SDI (Safe Direction) from r9733 no longer functions.		
			
Notice:	For a drive data set changeover with differently set direction and pulse enable, an appropriate fault is output.		

Note: For operation with the phase sequence U/V/W, the direction is defined when viewing the face side of the motor output shaft.

When changing the direction, the rotating field direction of the current controller is reversed. The actual velocity (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).

For VECTOR, the following applies:

p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.

p1821[0...n]	Dir of rot / Dir of rot		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(3) Data type: Integer16	Calculated: - Dyn. index: DDS, p0180	Access level: 3 Func. diagram: 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732
	P-Group: Motor Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0	Max 1	Factory setting 0
Description:	Setting to change the direction of rotation. If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.		
Value:	0: CW 1: CCW		
Dependency:	Refer to: F07434		
Danger: 	When using external speed actual values for the speed controller (see p1440), for a direction of rotation change (p1821 = 1), then its polarity must also be changed (e.g. for drive object ENCODER via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.		
Caution: 	For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15. Changing the direction using p1820 or p1821 is not recognized by the "Safe Direction without encoder". As a consequence, the limit provided by SDI (Safe Direction) from r9733 no longer functions.		
Notice:	An appropriate fault is output for a drive data set changeover where the direction of rotation changes and the pulses are enabled.		
Note:	For operation with the phase sequence U/V/W, the direction of rotation is defined when viewing the face side of the motor output shaft. When changing the direction of rotation, the rotating field direction of the current controller is reversed. The speed actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]). p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.		

p1822	Power unit line phases monitoring tolerance time / PU ph monit t_tol		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: Unsigned32 P-Group: - Not for motor type: -	Calculated: - Dyn. index: - Unit group: - Scaling: -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1
	Min 500 [ms]	Max 540000 [ms]	Factory setting 1000 [ms]
Description:	Sets the tolerance time for line phase monitoring for blocksize power units. If a line phase fault is present for longer than this tolerance time, then a corresponding fault is output.		
Dependency:	Refer to: F30011		
Notice:	When operating with a failed line phase, depending on the active power, values higher than the default value can either immediately damage the power unit or damage it over the long term.		
Note:	For the setting p1822 = maximum value, line phase monitoring is deactivated.		

2 Parameters

2.2 List of parameters

p1825	Converter valve threshold voltage / Threshold voltage		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 0.0 [Vrms]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 100.0 [Vrms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.6 [Vrms]
Description:	Sets the threshold voltage drop of the valves (power semiconductor devices) to be compensated.		
Note:	The value is automatically calculated in the motor data identification routine.		
<hr/>			
p1827	Infeed compensation valve lockout time operating mode / INFcomp t_lockMode		
A_INF, S_INF, R_INF	Can be changed: U, T Data type: Integer16 P-Group: Modulation Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the operating mode for the compensation of the valve lockout time.		
Value:	0: Compensation valve lockout time deactivated 1: Compensation valve lockout time activated		
Note:	The compensation is always active, independent of the value of this parameter if the closed-loop control is activated to suppress circulating currents (p7035) for power units connected in parallel.		
<hr/>			
p1828	Compensation valve lockout time phase U / Comp t_lock ph U		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 0.00 [µs]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 1000000.00 [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [µs]
Description:	Sets the valve lockout time to compensate for phase U.		
Notice:	Deadtime compensation is deactivated with p7003 = 2.		
Note:	The value is automatically calculated in the motor data identification routine. For type PM340 power units, the value is limited to 3.98 µs.		
<hr/>			
p1829	Compensation valve lockout time phase V / Comp t_lock ph V		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 0.00 [µs]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 1000000.00 [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [µs]
Description:	Sets the valve lockout time to compensate for phase V.		
Notice:	Deadtime compensation is deactivated with p7003 = 2.		
Note:	For type PM340 power units, the value is limited to 3.98 µs.		

p1830[0...n]	Factor plane adaptation positive / Fact pl_adap pos		
HLA	Can be changed: U, T Data type: FloatingPoint32	Calculated: CALC_MOD_EQU Dyn. index: DDS, p0180	Access level: 3 Func. diagram: 4965, 4970, 4975
	P-Group: Motor Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 10.0 [%]	Max 200.0 [%]	Factory setting 100.0 [%]
Description:	Sets the factor for the plane compensation in the positive direction.		
Dependency:	Refer to: p1831		
p1830	Compensation valve lockout time phase W / Comp t_lock ph W		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32	Calculated: CALC_MOD_ALL Dyn. index: -	Access level: 3 Func. diagram: -
	P-Group: Modulation Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0.00 [µs]	Max 1000000.00 [µs]	Factory setting 0.00 [µs]
Description:	Sets the valve lockout time to compensate for phase W.		
Notice:	Deadtime compensation is deactivated with p7003 = 2.		
Note:	For type PM340 power units, the value is limited to 3.98 µs.		
p1831[0...n]	Factor plane adaptation negative / Fact pl_adap neg		
HLA	Can be changed: U, T Data type: FloatingPoint32	Calculated: CALC_MOD_EQU Dyn. index: DDS, p0180	Access level: 3 Func. diagram: 4965, 4970, 4975
	P-Group: Motor Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 10.0 [%]	Max 200.0 [%]	Factory setting 100.0 [%]
Description:	Sets the factor for the plane compensation in the negative direction.		
Dependency:	Refer to: p1830		
p1832[0...n]	Valve offset / Valve offset		
HLA	Can be changed: U, T Data type: FloatingPoint32	Calculated: CALC_MOD_ALL Dyn. index: PDS, p0120	Access level: 3 Func. diagram: 4966
	P-Group: Motor Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min -10.0000 [V]	Max 10.0000 [V]	Factory setting 0.0000 [V]
Description:	Sets the offset for the analog valve setpoint.		

p1832	Dead time compensation current level / t_dead_comp I_lev		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Arms]	10000.0 [Arms]	0.0 [Arms]
Description:	Sets the current level for the dead time compensation. Above the current level, the dead time - resulting from the converter switching delays - is compensated by a previously calculated constant value. If the relevant phase current setpoint falls below the absolute value defined by p1832, the corrective value for this phase is continuously reduced.		
Dependency:	The factory setting of p1832 is automatically set to 0.02 * rated drive converter current (r0207).		

p1833[0...n]	Transition point compensation Q1 positive zero range / Trans pt Q1 pos		
HLA	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4966, 4975
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.01 [%]	95.00 [%]	0.01 [%]
Description:	Sets the flow rate Q for point 1 positive (zero range) of the transition point compensation. The characteristic for the transition point compensation comprises the following value pairs: Flow rate (Q) / voltage (U) Positive range: - p1833 / p1834 --> Point 1 pos (zero range), rounding p1835 - p1839 / p1840 --> Point 2 pos, rounding p1841 - p1845 / p1846 --> Point 3 pos (saturation) Negative range: - p1836 / p1837 --> Point 1 neg (zero range), rounding p1838 - p1842 / p1843 --> Point 2 neg, rounding p1844 - p1847 / p1848 --> Point 3 neg (saturation)		
Dependency:	Refer to: p1834, p1835		

r1833[0...2]	Setpoints phase currents for HW current control / Setp_I		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: 6_5	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Displays the phase setpoint currents for hardware current control.		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W		

p1834[0...n]	Transition point compensation U1 positive zero range / Trans pt U1 pos		
HLA	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4966, 4975
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	95.00 [%]	0.00 [%]
Description:	Sets the voltage U for point 1 positive (zero range) of the transition point compensation. The characteristic for the transition point compensation comprises the following value pairs: Flow rate (Q) / voltage (U) Positive range: - p1833 / p1834 --> Point 1 pos (zero range), rounding p1835 - p1839 / p1840 --> Point 2 pos, rounding p1841 - p1845 / p1846 --> Point 3 pos (saturation) Negative range: - p1836 / p1837 --> Point 1 neg (zero range), rounding p1838 - p1842 / p1843 --> Point 2 neg, rounding p1844 - p1847 / p1848 --> Point 3 neg (saturation)		
Dependency:	Refer to: r1833, p1833, p1835		
p1835[0...n]	Transition point compensation rounding 1 positive zero range / Trans pt rnd 1 pos		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4966, 4975
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	30.00 [%]	0.00 [%]
Description:	Sets the rounding for point 1 positive (zero range) of the transition point compensation. The characteristic for the transition point compensation comprises the following value pairs: Flow rate (Q) / voltage (U) Positive range: - p1833 / p1834 --> Point 1 pos (zero range), rounding p1835 - p1839 / p1840 --> Point 2 pos, rounding p1841 - p1845 / p1846 --> Point 3 pos (saturation) Negative range: - p1836 / p1837 --> Point 1 neg (zero range), rounding p1838 - p1842 / p1843 --> Point 2 neg, rounding p1844 - p1847 / p1848 --> Point 3 neg (saturation)		
Dependency:	Refer to: r1833, p1833, p1834		
p1835[0...1]	Pulse frequency reduction switchover frequency shift / f_puls_red f_sw		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	800.00 [Hz]	0.00 [Hz]
Description:	Frequency to shift the switchover frequency r1836 for pulse frequency reduction. The parameter value reduces the switchover frequency threshold with the same parameter index.		
Index:	[0] = Frequency limit 1 [1] = Frequency limit 2		
Dependency:	Refer to: r1836, p1836		

2 Parameters

2.2 List of parameters

p1836[0...n]	Transition point compensation Q1 negative zero range / Trans pt Q1 neg			
HLA	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4966, 4975	
	P-Group: Motor	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.01 [%]	95.00 [%]	0.01 [%]	
Description:	Sets the flow rate Q for point 1 negative (zero range) of the transition point compensation.			
Dependency:	Refer to: r1837, p1837, p1838			
r1836[0...1]	Pulse frequency reduction, switchover frequency / f_puls_red f_sw			
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Modulation	Unit group: -	Unit selection: -	
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	- [Hz]	- [Hz]	- [Hz]	
Description:	Displays the frequency limits, under which the pulse frequency is automatically reduced. Starting from the parameterized pulse frequency p1800, the pulse frequency is reduced to the next possible one, if the frequency limits and an additional hysteresis are fallen below.			
Index:	[0] = Frequency limit 1 [1] = Frequency limit 2			
Dependency:	Refer to: p1810, p1835			
Note:	The pulse frequency reduction is not active for U/f control. A minimum clearance of 10 Hz is kept between the frequency thresholds, which cannot be fallen below when changing p1835. For index 0: Frequency limit for the first pulse frequency reduction (active for p1810.8 = 1). For index 1: Frequency limit for the second pulse frequency reduction (active for p1810.9 = 1).			
p1837[0...n]	Transition point compensation U1 negative zero range / Trans pt U1 neg

p1900	Motor data identification and rotating measurement / MotID and rot meas		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1), T Data type: Integer16 P-Group: Motor identification Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2
Description:	Sets the motor data identification and speed controller optimization. p1900 = 0: Function inhibited. p1900 = 2: Induction motors --> set p1910 = 1 and p1960 = 0 Permanent-magnet or separately excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0 When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next switch-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution. For permanent-magnet or separately excited synchronous motors, the encoder is adjusted with the next switch-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.		

2 Parameters

2.2 List of parameters

Value:	0: Inhibited 2: Identifying motor data (at standstill)
Dependency:	In the simulation mode, the parameter cannot be written into. When selecting the motor data identification routine, the drive data set changeover is suppressed. Refer to: p1272, p1300, p1910 Refer to: F07990, A07991
Notice:	If there is a motor holding brake, it must be open (p1215 = 2). To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977). It is not permissible to activate write protection during the motor identification (p7761). During the rotating measurement it is not possible to save the parameters (p0971, p0977).
Note:	The motor and control parameters of the vector control are only optimally set when both measurements are carried out (initially at standstill, and then with the motor rotating). The measurement with rotating motor is not performed for p1300 < 20 (U/f controls). An appropriate alarm is output when the parameter is set. The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it. The duration of the measurements can lie between 0.3 s and several minutes. This time is, for example, influenced by the motor size and the mechanical conditions. p1900 is automatically set to 0 after the motor data identification routine has been completed. If a reluctance motor has been parameterized, a pole position identification is carried out during the stationary measurement. As a consequence, faults that occur can also be assigned to the pole position identification.

p1900	Motor data identification and rotating measurement / MotID and rot meas		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	2
Description:	<p>Sets the motor data identification and speed controller optimization.</p> <p>The motor identification should first be performed with the motor stationary (p1900 = 1, 2; also refer to p1910). Based on this, additional motor and control parameters can be determined using the motor data identification with the motor rotating (p1900 = 1, 3; also refer to p1960); not for p1300 < 20.</p> <p>p1900 = 0: Function inhibited.</p> <p>p1900 = 1: Induction motors --> set p1910 = 1 and p1960 = 0, 1, 2 depending on p1300 Permanent-magnet or separately excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0, 1, 2 depending on p1300</p> <p>When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next switch-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.</p> <p>For permanent-magnet or separately excited synchronous motors, the encoder is adjusted with the next switch-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.</p> <p>With the following switch-on command, a rotating motor data identification routine is carried out - and in addition, a speed controller optimization by making measurements at different motor speeds.</p> <p>p1900 = 2: Induction motors --> set p1910 = 1 and p1960 = 0 Permanent-magnet or separately excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0</p> <p>When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next switch-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.</p> <p>For permanent-magnet or separately excited synchronous motors, the encoder is adjusted with the next switch-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.</p>		

p1900 = 3:

Sets p1960 = 0, 1, 2 depending on p1300

This setting should only be selected if the motor data identification was already carried out at standstill.

When the drive enable signals are present, with the next switch-on command, a rotating motor data identification routine is carried out - and in addition, speed controller optimization by taking measurements at different motor speeds.

Value: 0: Inhibited
1: Identifying motor data and optimizing the speed controller
2: Identifying motor data (at standstill)
3: Optimizing the speed controller (in rotating operation)

Dependency: In the simulation mode, the parameter cannot be written into.
When selecting the motor data identification routine, the drive data set changeover is suppressed.
Refer to: p1272, p1300, p1910, p1960, p1990

Notice: Refer to: A07980, A07981, F07982, F07983, F07984, F07985, F07986, A07987, F07988, F07990, A07991
If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

It is not permissible to activate write protection during the motor identification (p7761).

During the rotating measurement it is not possible to save the parameters (p0971, p0977).

p1900 = 3:

This setting should only be selected if the motor data identification was already carried out at standstill.

Note: The motor and control parameters of the vector control are only optimally set when both measurements are carried out (initially at standstill, and then with the motor rotating). The measurement with rotating motor is not performed for p1300 < 20 (U/f controls).

An appropriate alarm is output when the parameter is set.

The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it.

The duration of the measurements can lie between 0.3 s and several minutes. This time is, for example, influenced by the motor size and the mechanical conditions.

p1900 is automatically set to 0 after the motor data identification routine has been completed.

If a reluctance motor has been parameterized, a pole position identification is carried out during the stationary measurement. As a consequence, faults that occur can also be assigned to the pole position identification.

p1901

Test pulse evaluation configuration / Test puls config

VECTOR,
VECTOR_AC,
VECTOR_I_AC

Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 2
Data type: Unsigned32	Dyn. index: -	Func. diagram: -
P-Group: Motor identification	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
-	-	0000 bin

Description: Sets the configuration for the test pulse evaluation.

Bit 00: Check for conductor-to-conductor short circuit once/always when the pulses are enabled.

Bit 01: Check for ground fault once/always when the pulses are enabled.

Bit 02: Activation of the tests selected using bit 00 and/or bit 01 each time the pulses are enabled

Recommendation: If the ground fault test is incorrectly initiated because the motor is not at a complete standstill, then the pulse cancellation delay time (p1228) should be increased.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Phase short-circuit test pulse active	Yes	No	-
	01	Ground fault detection test pulse active	Yes	No	-
	02	Test pulse at each pulse enable	Yes	No	-

Dependency: The ground fault test is only possible when the motor is stationary, and is therefore only realized when flying restart is deactivated (p1200 = 0).

When a sine-wave filter is connected, the short-circuit and the ground fault test are deactivated, as the filter could be excited by the test pulse.

Refer to: p0287

2 Parameters

2.2 List of parameters

Note: If a conductor-to-conductor short-circuit is detected during the test, this is displayed in r1902.1.
 If a ground fault is detected during the test, this is displayed in r1902.2.
 For bit 02 = 0:
 If the test was successful once after POWER ON (see r1902.0), it is not repeated.
 For bit 02 = 1:
 The test is not only performed after POWER ON, but also each time the pulses are enabled.

r1902	Test pulse evaluation status / Test puls ev stat		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status of the test pulse evaluation.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Short-circuit test successfully performed	Yes	No	-
	01	Phase short-circuit detected	Yes	No	-
	02	Ground fault test successfully performed	Yes	No	-
	03	Ground fault detected	Yes	No	-
	04	Identification pulse width greater than the minimum pulse width	Yes	No	-

Note: If the ground fault test was selected, but not successfully performed, then sufficient current was not be able to be established during the test pulses.
 For bit 04:
 A test pulse longer than one sampling time has occurred

p1903	BI: Data identification control / Data ident ctrl		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source to control data identification (moving measurement).
 For p1903 = 1 signal, the following applies:
 - data identification is started using p1960 = -1 or 1.
 For p1903 = 0 signal, the following applies:
 - data identification is selected using p1960 = -1 or 1; however, is only actually executed with p1903 = 0/1 signal.
 The following generally applies:
 - when data identification is running, the function can be canceled with binector input p1903 = 0 signal.

p1905	Parameter tuning selection / Par tuning select		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	90	0

Description: The fine encoder calibration should be started during the first commissioning or after the encoder is replaced.
 The fine calibration starts when the pulses are enabled and performs a rotating measurement (approximately 1 minute). In this case, a setpoint speed of at least 40 % of the motor rated speed must be entered, and the torque must be less than half of the motor rated torque.
 The phases of the fine calibration of displayed using alarm A07976.

The fine calibration ends with the calculation of p0431 for the following pulse inhibit.

p1905 is automatically set to 0 at the end of the fine calibration.

Value:	0: Inactive 90: Fine encoder calibration
Dependency:	If the motor encoder adjustment has not been performed (p3925.4 = 0) or the encoder calibration is activated (p1990 != 0), then encoder fine calibration is prevented. Refer to: p1272, p1910, p1960, p1990 Refer to: A07976
Notice:	During encoder fine calibration, the motor must be operated without a load - and if a motor holding brake is being used, this must be opened.
Note:	For p1905 = 90 and with the pulses not enabled, the function is only executed the next time that the pulses are enabled. When selecting the encoder fine calibration, the changeover of the motor data sets is suppressed.

p1909		Data identification without enabling activation / Data ID w/o enab			
HLA	Can be changed: U, T Data type: Unsigned16 P-Group: Motor identification Not for motor type: - Min -	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin		
Description:	Activates the stationary data identification without enable.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Pressure sensors execute offset calibration	Yes	No	-
	01	Execute piston calibration	Yes	No	-
Dependency:	Refer to: p1910				
Note:	The offset calibration is immediately started when writing to p1909. The associated bit is automatically reset if the function was executed. For bit 00: The precondition for the offset calibration is that the pressure at all of the pressure sensors is zero. The offset is entered in p0241, p0243 and p0245. For bit 01: The precondition is that the cylinder must have been completely retracted (piston at the A side). The position offset is entered in p0476.				

p1909[0...n]		Motor data identification control word / MotID STW			
SERVO (Ext M_ctrl, Lin), SERVO_AC (Ext M_ctrl, Lin), SERVO_I_AC (Ext M_ctrl, Lin)	Can be changed: T Data type: Unsigned16 P-Group: Motor identification Not for motor type: - Min -	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0110 0111 0000 0000 bin		
Description:	Sets the configuration for the motor data identification.				
Recommendation:	For the stationary motor data identification, if a motor holding brake is being used it should be opened and the motor finely synchronized before the measurement. This should only be done if it can be safely carried out and no external forces can act on the motor. This determines the angular commutation offset (p1909.13, p0431).				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	08	Measure D inductance	Yes	No	-
	09	Measure Q inductance	Yes	No	-
	10	Magnetizing field inductance and measure rotor resistance	Yes	No	-
	13	Measure commutation angle and direction of rotation	Yes	No	-
	14	Determining the voltage emulation error	Yes	No	-
Dependency:	Refer to: p1910, r1912, r1913, r1915, r1925, r1927, r1932, r1933, r1934, r1935, r1936, r1950, r1951, p1952, p1953				

2 Parameters

2.2 List of parameters

Note: For an induction motor (ASM) the following bits: 8, 9, 10, 13 are effective
 For a synchronous motor (SRM) the following bits: 8, 9, 13, 14 are effective
 For bit 14:
 - after successfully determining the voltage emulation error, the display of the phase voltage actual values r0089 and the active power actual value r0082 and the torque actual value r0080 are significantly more accurate.
 - the voltage emulation errors should be identified with the Motor Module in the warm state.
 - the motor temperature (r0035) should not change significantly (i.e. it should not be identified immediately after a load duty cycle).

p1909[0...n]		Motor data identification control word / MotID STW			
SERVO (Lin), SERVO, SERVO_AC (Lin), SERVO_AC, SERVO_I_AC (Lin), SERVO_I_AC	Can be changed: T Data type: Unsigned16 P-Group: Motor identification Not for motor type: - Min -	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0010 0111 0000 0000 bin		
Description:	Sets the configuration for the motor data identification.				
Recommendation:	For the stationary motor data identification, if a motor holding brake is being used it should be opened and the motor finely synchronized before the measurement. This should only be done if it can be safely carried out and no external forces can act on the motor. This determines the angular commutation offset (p1909.13, p0431).				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	08	Measure D inductance	Yes	No	-
	09	Measure Q inductance	Yes	No	-
	10	Magnetizing field inductance and measure rotor resistance	Yes	No	-
	13	Measure commutation angle and direction of rotation	Yes	No	-
	14	Determining the voltage emulation error	Yes	No	-
Dependency:	Refer to: p1910, r1912, r1913, r1915, r1925, r1927, r1932, r1933, r1934, r1935, r1936, r1950, r1951, p1952, p1953				
Note:	For an induction motor (ASM) the following bits: 8, 9, 10, 13 are effective For a synchronous motor (SRM) the following bits: 8, 9, 13, 14 are effective For bit 14: - after successfully determining the voltage emulation error, the display of the phase voltage actual values r0089 and the active power actual value r0082 and the torque actual value r0080 are significantly more accurate. - the voltage emulation errors should be identified with the Motor Module in the warm state. - the motor temperature (r0035) should not change significantly (i.e. it should not be identified immediately after a load duty cycle).				

p1909[0...n]		Motor data identification control word / MotID STW			
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T Data type: Unsigned32 P-Group: Motor identification Not for motor type: - Min -	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 0000 0000 0000 0000 0000 0000 0000 bin		
Description:	Sets the configuration for the motor data identification.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Stator inductance estimate no measurement	Yes	No	-
	01	Cl.-loop current control w/ dead-beat controller	Yes	No	-
	02	Rotor time constant estimate no measurement	Yes	No	-
	03	Leakage inductance estimate no measurement	Yes	No	-

04	Activates the identification dynamic leakage inductance	Yes	No	-
05	Determine Tr and Lsig evaluation in the time range	Yes	No	-
06	Activate vibration damping	Yes	No	-
07	Deactivate vibration detection	Yes	No	-
11	Deactivate pulse measurement Lq Ld	Yes	No	-
12	Deactivate rotor resistance Rr measurement	Yes	No	-
14	Deactivate valve interlocking time measurement	Yes	No	-
15	Determine only stator resistance, valve voltage fault, dead time	Yes	No	-
16	Short motor identification (lower quality)	Yes	No	-
17	Measurement without control parameter calculation	Yes	No	-
20	Estimate cable resistance	Yes	No	-
22	Only identify circle	Yes	No	-
23	Deactivate circle identification	Yes	No	-
24	Circle identification with 0 and 90 degrees	Yes	No	-
25	Deactivate gating unit switchover	Yes	No	-

Note:

The following applies to permanent-magnet synchronous motors:

Without de-selection in bit 11, in the closed-loop control mode, the direct inductance LD and the quadrature inductance Lq are measured at a low current.

When de-selecting with bit 11 or in the U/f mode, the stator inductance is measured at half the rated motor current.

If the stator inductance is not measured but is to be estimated, then bit 0 should be set and bit 11 should be de-selected.

p1910**Valve offset calibration standstill activation / Valv_off_calib act**

HLA	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description:

Setting to activate the standstill data valve offset calibration when enabled.

Value:

0: Inactive/cancel
1: Start calibration

Dependency:

Precondition is position-controlled operation.

Refer to: p1909

Refer to: A07991

Note:

The offset is entered in p1832.

The calibration is started when enabled, and after data identification has been completed, is automatically set back to a value of zero.

p1910**Motor data identification routine stationary (standstill) / MotID standstill**

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-3	1	0

Description:

Setting to control the motor data identification with the motor stationary.

Value:

-3: Accept identified parameters
-2: Acknowledge encoder inversion actual value (F07993)
-1: Start motor data identification without acceptance
0: Inactive/inhibit
1: Start motor data identification with acceptance

2 Parameters

2.2 List of parameters

Recommendation: For motors with brakes, the brake should be opened before carrying out the stationary motor data identification routine (p1215 = 2) as long as this can be done without incurring any danger. The commutation angle and the direction of rotation are also determined.

Motor data identification is not required for catalog motors and DRIVE-CLiQ motors. It is recommended to increase the torque accuracy or for third-party motors.

Dependency: Refer to: p1909, r1912, r1913, r1915, r1925, r1927, r1932, r1933, r1934, r1935, r1936, r1950, r1951, p1952, p1953
Refer to: F07990, A07991, F07993

Caution: For motors without brake or with the brake open (p1215 = 2), for the stationary (zero speed) measurement, the motor may rotate slightly.

Note: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Motor data identification can only be selected when the pulses of all of the drive objects of the Control Unit have been suppressed. After selection, all of the other drive objects of the Control Unit are interlocked so that they cannot be switched on until the motor data identification has been completed or de-selected.

After a started motor identification is ended, the parameter is automatically reset to 0.

A motor data identification that is presently being carried out can be terminated with p1910 = 0.

p1910

VECTOR,
VECTOR_AC,
VECTOR_I_AC

Motor data identification selection / MotID selection

Can be changed: T	Calculated: -	Access level: 2
Data type: Integer16	Dyn. index: -	Func. diagram: -
P-Group: Motor identification	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
0	28	1

Description: Sets the motor data identification routine.

The motor data identification routine is carried out after the next switch-on command.

p1910 = 1:

All motor data and the drive converter characteristics are identified and then transferred to the following parameters:

p0350, p0354, p0356, p0357, p0358, p0360, p1825, p1828, p1829, p1830

After this, the control parameter p0340 = 3 is automatically calculated.

Value:

- 0: Inhibited
- 1: Complete identification (ID) and acceptance of motor data
- 2: Complete identification (ID) of motor data without acceptance
- 3: ID of the saturation characteristic and acceptance
- 4: ID of the saturation characteristic without acceptance
- 5: ID of dynamic leakage inductance Lsig (r1920) without acceptance
- 6: ID of lockout time (r1926) without acceptance
- 7: ID of stator resistance Rs (r1912) without acceptance
- 8: ID of stator inductance Ls (r1915) Rr (r1927) without acceptance
- 9: ID of rotor time constant Tr (r1913) without acceptance
- 10: ID of static leakage inductance Lsig (r1914) without acceptance
- 20: Voltage vector input
- 21: Voltage vector input without filter
- 22: Rectangular voltage vector input without filter
- 23: Triangular voltage vector input without filter
- 24: Rectangular voltage vector input with filter
- 25: Triangular voltage vector input with filter
- 26: Enter voltage vector with DTC correction
- 27: Enter voltage vector with AVC
- 28: Enter voltage vector with DTC + AVC correction

Dependency: "Quick commissioning" must be carried out (p0010 = 1) before executing the motor data identification routine!

In the simulation mode, the parameter cannot be written into. When selecting the motor data identification routine, the drive data set changeover is suppressed.

Refer to: p1272, p1900

Refer to: F07990, A07991

- Notice:** After the motor data identification (p1910 > 0) has been selected, alarm A07991 is output and a motor data identification routine is carried out as follows at the next switch-on command:
- current flows through the motor and a voltage is present at the drive converter output terminals.
 - during the identification routine, the motor shaft can rotate through a maximum of half a revolution.
 - however, no torque torque is generated.
- Note:** If there is a motor holding brake, it must be open (p1215 = 2).
To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).
When setting p1910, the following should be observed:
1. "With acceptance" means:
The parameters specified in the description are overwritten with the identified values and therefore have an influence on the controller setting.
 2. "Without acceptance" means:
The identified parameters are only displayed in the range r1912 ... r1926. The controller settings remain unchanged.
 3. p1910 = 3, 4, 5 can only be selected for induction motors.
 4. For settings 27 and 28, the AVC configuration set using p1840 is active.
- The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it. The duration of the measurements can lie between 0.3 s and several minutes. This time is mainly influenced by the motor size. At the end of the motor data identification, p1910 is automatically set to 0, if only the stationary measurement is selected, then p1900 is also reset to 0, otherwise, the rotating measurement is activated.

p1911	Phases to be identified number / Ph to ident qty		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 4

r1923[0...2]	Identified dynamic leakage inductance 3 / L_leak 3 dyn id		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min - [mH]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [mH]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [mH]
Description:	Displays the identified dynamic leakage inductance 3.		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W		
r1924[0...2]	Identified dynamic leakage inductance 4 / L_leak 4 dyn id		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min - [mH]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [mH]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [mH]
Description:	Displays the identified dynamic leakage inductance 4.		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W		
r1925	Threshold voltage identified / U_threshold ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min - [Vrms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [Vrms]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Vrms]
Description:	Displays the identified threshold voltage of the power unit.		
Dependency:	Refer to: p1909, p1910, r1912, r1913, r1915, r1927, r1932, r1933, r1934, r1935, r1936, r1950, r1951, p1952, p1953		
r1925[0...2]	Identified threshold voltage / U_threshold ident		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min - [Vrms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [Vrms]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Vrms]
Description:	Displays the identified IGBT threshold voltage.		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W		

2 Parameters

2.2 List of parameters

r1926[0...2]	Identified effective valve lockout time / t_lock_valve id		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min - [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [µs]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [µs]
Description:	Displays the identified effective valve lockout time.		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W		

r1927	Rotor resistance identified / R_rotor ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min - [ohm]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [ohm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [ohm]
Description:	Displays the identified rotor resistance.		
Dependency:	Refer to: p1909, p1910, r1912, r1913, r1915, r1925, r1932, r1933, r1934, r1935, r1936, r1950, r1951, p1952, p1953		

r1927[0...2]	Identified rotor resistance / R_rotor ident		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min - [ohm]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [ohm]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [ohm]
Description:	Displays identified rotor resistance (on separately excited synchronous motors: damping resistance).		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W		

r1929[0...2]	Identified cable resistance / R_cable ident		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min - [ohm]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [ohm]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [ohm]
Description:	Displays the identified cable resistance.		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W		

r1932[0...19]	d inductance identified / Ld ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the identified (differential) d-inductance.		
Dependency:	Refer to: p1909, p1910, r1912, r1913, r1915, r1925, r1927, r1933, r1934, r1935, r1936, r1950, r1951, p1952, p1953		
Note:	The Ld characteristic consists of the value pairs from p1932 and p1933 with the same index. This value corresponds to the value of the total leakage inductance (r0377).		

r1933[0...19]	d inductance identification current / Ld I_ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the identification current of the d inductance.		
Dependency:	Refer to: p1909, p1910, r1912, r1913, r1915, r1925, r1927, r1932, r1934, r1935, r1936, r1950, r1951, p1952, p1953		
Note:	The Ld characteristic consists of the value pairs from p1932 and p1933 with the same index.		

r1934[0...9]	q inductance identified / Lq ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the identified (differential) q-inductance.		
Dependency:	Refer to: p1909, p1910, r1932, r1933		
Note:	The Lq characteristic consists of the value pairs from p1934 and p1935 with the same index. This value corresponds to the value of the total leakage inductance (r0377).		

r1934[0...9]	q inductance identified / Lq ident		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the identified (differential) q-inductance.		
Dependency:	Refer to: r1935, p1959, p1960		
Note:	The Lq characteristic consists of the value pairs from p1934 and p1935 with the same index. This value corresponds to the value of the total leakage inductance (r0377).		

r1935[0...20]	Identification current / I_ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the identification current for the identification of the q-inductance ([0...9]) as well as the torque constant ([10]) and the torque characteristic ([11...20]).		
Index:	[0] = q inductance identification current measuring point 1 [1] = q inductance identification current measuring point 2 [2] = q inductance identification current measuring point 3 [3] = q inductance identification current measuring point 4 [4] = q inductance identification current measuring point 5 [5] = q inductance identification current measuring point 6 [6] = q inductance identification current measuring point 7 [7] = q inductance identification current measuring point 8 [8] = q inductance identification current measuring point 9 [9] = q inductance identification current measuring point 10 [10] = Torque constant identification current [11] = Torque characteristic identification current measuring point 1 [12] = Torque characteristic identification current measuring point 2 [13] = Torque characteristic identification current measuring point 3 [14] = Torque characteristic identification current measuring point 4 [15] = Torque characteristic identification current measuring point 5 [16] = Torque characteristic identification current measuring point 6 [17] = Torque characteristic identification current measuring point 7 [18] = Torque characteristic identification current measuring point 8 [19] = Torque characteristic identification current measuring point 9 [20] = Torque characteristic identification current measuring point 10		
Dependency:	Refer to: p1909, p1910, r1934, p1959, p1960		
Note:	- the Lq characteristic consists of the value pairs from r1934 and r1935 with the same index. - the torque constant is identified with the current r1935[10] and displayed in r1937[0]. If the reluctance torque constant is identified (p1959.7 = 1), the torque constant is identified with 150% rated current (p0305), otherwise with 100% rated current. - the torque characteristic (r1937[1...10]) is identified in the range between the rated current (p0305) and the maximum current (p0640) (r1935[11...20]).		

r1935[0...20]	Identification current / I_ident		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the identification current for the identification of the q-inductance ([0...9]) as well as the force constant ([10]) and the force characteristic ([11...20]).		
Index:	[0] = q inductance identification current measuring point 1 [1] = q inductance identification current measuring point 2 [2] = q inductance identification current measuring point 3 [3] = q inductance identification current measuring point 4 [4] = q inductance identification current measuring point 5 [5] = q inductance identification current measuring point 6 [6] = q inductance identification current measuring point 7 [7] = q inductance identification current measuring point 8 [8] = q inductance identification current measuring point 9 [9] = q inductance identification current measuring point 10 [10] = Force constant identification current [11] = Force characteristic identification current measuring point 1		

[12] = Force characteristic identification current measuring point 2
 [13] = Force characteristic identification current measuring point 3
 [14] = Force characteristic identification current measuring point 4
 [15] = Force characteristic identification current measuring point 5
 [16] = Force characteristic identification current measuring point 6
 [17] = Force characteristic identification current measuring point 7
 [18] = Force characteristic identification current measuring point 8
 [19] = Force characteristic identification current measuring point 9
 [20] = Force characteristic identification current measuring point 10

Dependency:

Refer to: p1909, p1910, r1934, p1959, p1960

Note:

- the Lq characteristic consists of the value pairs from r1934 and r1935 with the same index.
 - the force constant is identified with the current r1935[10] and displayed in r1937[0]. If the reluctance force constant is identified (p1959.7 = 1), the force constant is identified with 150% rated current (p0305), otherwise with 100% rated current.
 - the force characteristic (r1937[1...10]) is identified in the range between the rated current (p0305) and the maximum current (p0640) (r1935[11...20]).

r1935[0...9]**q inductance identification current / Lq I_ident**

VECTOR (n/M),
 VECTOR_AC (n/M),
 VECTOR_L_AC (n/M)

- [Arms]

- [Arms]

- [Arms]

Description:

Displays the identification current to identify the q inductance ([0...9]).

Dependency:

Refer to: r1934, p1959, p1960

Note:

The Lq characteristic consists of the value pairs from r1934 and r1935 with the same index.

r1936**Magnetizing inductance identified / L_H ident**

SERVO, SERVO_AC,
 SERVO_L_AC

Can be changed: -**Calculated:** -**Access level:** 3**Data type:** FloatingPoint32**Dyn. index:** -**Func. diagram:** -**P-Group:** Motor identification**Unit group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

- [mH]

- [mH]

- [mH]

Description:

Displays the identified magnetizing inductance(gamma equivalent circuit diagram).

Dependency:

Refer to: p1909, p1910, r1913, r1915, r1927, p1959, p1960, r1962, r1963

Note:

This value corresponds to the value of the transformed magnetizing inductance (r0382).

r1937[0...10]**Torque constant identified / kT ident**

SERVO, SERVO_AC,
 SERVO_L_AC

Can be changed: -**Calculated:** -**Access level:** 3**Data type:** FloatingPoint32**Dyn. index:** -**Func. diagram:** -**P-Group:** Motor identification**Unit group:** 28_1**Unit selection:** p0100**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

- [Nm/A]

- [Nm/A]

- [Nm/A]

Description:

Displays the identified torque constant/torque characteristic over the q current.

Index:

[0] = Torque constant identified
 [1] = Torque characteristic identified measuring point 1
 [2] = Torque characteristic identified measuring point 2
 [3] = Torque characteristic identified measuring point 3
 [4] = Torque characteristic identified measuring point 4
 [5] = Torque characteristic identified measuring point 5
 [6] = Torque characteristic identified measuring point 6
 [7] = Torque characteristic identified measuring point 7

2 Parameters

2.2 List of parameters

[8] = Torque characteristic identified measuring point 8
 [9] = Torque characteristic identified measuring point 9
 [10] = Torque characteristic identified measuring point 10

Dependency:

Refer to: r1938, r1939, p1959, p1960, r1969

Note:

- the value in r1937[0] corresponds to the torque constant (p0316) and was identified with the current in r1935[10]. If the reluctance torque is identified (p1959.7 = 1), the torque constant is identified with 150% rated current (p0305), otherwise with 100% rated current.
 - if indices r1937[1...10] are not equal to zero, they show the values of the torque characteristic identified for the current in r1935[11...20]. The torque characteristic is identified in the range between rated current (p0305) and maximum current (p0640).

	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	- [A]	- [A]	- [A]	
Description:	The identified characteristic of the voltage emulation error is displayed r1950[0...19] and r1951[0...19].			
Dependency:	Refer to: r1950			

p1952[0...n]	Voltage emulation error final value / U_error final val			
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Motor identification	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.000 [V]	100.000 [V]	0.000 [V]	
Description:	Sets the final value to compensate the voltage emulation error.			
Dependency:	Refer to: p1953			
Note:	The voltage emulation error is calculated and compensated for every phase according to the following formula: $u_error = u0 * i / (abs(i) + i0)$ u0: This is set in p1952. i0: This is set in p1953. i: Phase current to which the emulation error u_error belongs.			

p1953[0...n]	Voltage emulation error current offset / U_error I_offset		
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [A]	100.000 [A]	0.000 [A]
Description:	Sets the current offset to compensate the voltage emulation error.		
Dependency:	Refer to: p1952		
Note:	The voltage emulation error is calculated and compensated for every phase according to the following formula: $u_error = u0 * i / (abs(i) + i0)$ u0: This is set in p1952. i0: This is set in p1953. i: Phase current to which the emulation error u_error belongs.		

p1955[0...3]	Valve identification voltage / Valve ident U		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [V]	10.00 [V]	[0] 0.00 [V] [1] 10.00 [V] [2] 2.00 [V] [3] 2.00 [V]
Description:	Sets the voltage to identify the valve characteristic.		
Index:	[0] = Measuring range start [1] = Measuring range end [2] = Travel positive [3] = Travel negative		
Dependency:	Refer to: p1956, p1957, p1958, p1960, p1961, r1961, r1962		
Note:	The characteristic is measured with a positive and negative voltage in the range of p1955[0] to p1955[1]. To move to a suitable starting position, either p1955[2] or -p1955[3] is used.		

p1956[0...1]	Valve identification measuring distance / Valve ident dist		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	100.0 [%]	[0] 10.0 [%] [1] 90.0 [%]
Description:	Sets the range for the maximum measuring distance for valve identification.		
Index:	[0] = Minimum [1] = Maximum		
Dependency:	Refer to: p1955, p1957, p1958, p1960, p1961, r1961, r1962		
Note:	The parameter is referred to the maximum valve stroke (p0313). The values are only effective when the piston position is known (r1407.3 = 1).		

p1957[0...1]		Valve identification measured value / Valve ident val	
HLA	Can be changed: U, T Data type: Unsigned16 P-Group: Motor identification Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 100 [1] 4
Description:	Sets the measured value for valve identification.		
Index:	[0] = Number [1] = Standstill identification encoder pulses		
Dependency:	Refer to: p1955, p1956, p1958, p1960, p1961, r1961, r1962		
Note:	For index 0: The entered value is used for the positive and negative ranges. For index 1: Standstill is identified if these encoder pulses are not passed within the standstill monitoring time.		
p1958[0...4]		Valve identification time / Valve ident t	
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.00 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100.00 [s]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 0.10 [s] [1] 0.10 [s] [2] 0.10 [s] [3] 4.00 [s] [4] 4.00 [s]
Description:	Sets the times for valve identification.		
Index:	[0] = Ramp time [1] = Settling time [2] = Measuring time [3] = Standstill time [4] = Wait time		
Dependency:	Refer to: p1955, p1956, p1957, p1960, p1961, r1961, r1962		
Note:	For index 0: In this time, the voltage is changed from 0 ... 10 V. The ramp time is effective for all voltage changes. For index 1: After the target voltage has been reached, the system waits this time before the measurement is started. For index 2: The velocity is averaged within this time. For index 3: If there is no motion, time before the next measurement is made. For index 4: Time between 2 measurements in order to fill the pressure accumulator. The value applies for the maximum velocity, and is internally reduced depending on the velocity.		

p1958[0...n]	Rotating measurement ramp-up/ramp-down time / Rot meas t_r up/dn		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1.00 [s]	999999.00 [s]	-1.00 [s]
Description:	Sets the ramp-up/ramp-down time for the rotating measurement. The following applies for negative values: When the function module "extended setpoint channel" is activated (r0108.8 = 1), the maximum of the ramp-up/ramp-down time of the setpoint channel becomes effective. When this function module is inactive, then no ramp-up/ramp-down time is effective. The following applies for positive values: The selected ramp-up/ramp-down time becomes effective.		
Recommendation:	A ramp-up/ramp-down time should not be activated for the motor data identification (p1958 = 0) as long as this can be safely done without incurring any danger. This means that the identification is complete and more accurate. When the ramp-up/ramp-down time is activated, the following steps of the rotating motor data identification are not executed: - p1959.5 (identifying the q inductance) - p1959.7 (identifying the reluctance torque constant)		
Dependency:	Refer to: p1959, p1960		
p1958[0...n]	Moving measurement ramp-up/ramp-down time / Mov meas t_r up/dn		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1.00 [s]	999999.00 [s]	-1.00 [s]
Description:	Sets the ramp-up/ramp-down time for the moving measurement. The following applies for negative values: When the function module "extended setpoint channel" is activated (r0108.8 = 1), the maximum of the ramp-up/ramp-down time of the setpoint channel becomes effective. When this function module is inactive, then no ramp-up/ramp-down time is effective. The following applies for positive values: The selected ramp-up/ramp-down time becomes effective.		
Recommendation:	A ramp-up/ramp-down time should not be activated for the motor data identification (p1958 = 0) as long as this can be safely done without incurring any danger. This means that the identification is complete and more accurate. When the ramp-up/ramp-down time is activated, the following steps of the moving motor data identification are not executed: - p1959.5 (identifying the q inductance) - p1959.7 (identifying the reluctance force constant)		
Dependency:	Refer to: p1959, p1960		

p1959[0...n]	Data identification moving configuration / Dat_id mov config			
HLA	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 2	
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Motor identification	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 0001 0011 1111 bin	
Description:	Sets the configuration for data identification with movement.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Control sense correction	Yes	No
	01	Valve offset correction	Yes	No
	02	Automatic piston calibration	Yes	No
	03	Automatic traversing range detection	Yes	No
	04	Automatic characteristic identification	Yes	No
	05	Stiction forces	Yes	No
	08	System pressure correction for characteristic identification	Yes	No
Dependency:	Refer to: F07988			
Notice:	To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).			
Note:	For bit 00: In order to automatically correct the control sense for the velocity controller, the complete traversing distance must be free. When required, p1820 is automatically adapted.			
	For bit 01: The drive moves to correct the valve offset. When required, p1832 is automatically adapted.			
	For bit 02: Full automatic piston calibration, the drive must either be referenced, or must be equipped with an absolute encoder. Further, the complete traversing distance must be free. For piston calibration, the drive is traversed to the end stop (completely inserted) with a negative search voltage (p1955[3]) and the associated absolute position entered in p0476.			
	For bit 03: For automatic traversing range identification, the drive must either be referenced (homed), or must be equipped with an absolute encoder. Further, the piston must have been calibrated and the complete traversing distance must be free. To prepare for the identification of the characteristic, the possible traversing range is determined. To do this, the drive is traversed to the right-hand and left-hand end stops with the search voltage (p1955[3...4]) and the position with distance reserve is entered into p1956.			
	If there are pressure sensors, then the correct interconnection for pressure measurements A and B is checked.			
	For bit 04: For automatic characteristic identification, the drive must either be referenced (homed), or must be equipped with an absolute encoder. Further, the piston must have been calibrated and the free traversing range must have been entered in p1956. The drive traverses with different valve voltages and takes into account p1958.			
	For bit 05: The drive is moved with a positive and negative velocity, and the measured stiction forces are entered into p1555 and p1556.			
	For bit 06: The drive is traversed to both end stops. In so doing, the dead volume and the loop gain of the force control loop is measured, and entered into p0314 and p0315.			
	For bit 08: For the automatic characteristic identification (p1959.4), the measured velocity with the measured system pressure is converted to the average system pressure; this means that system pressure fluctuations hardly influence the measurement. The system pressure as well as pressures A and B must be measured. The conversion is not performed if the pressure measurements are not available. If the pressure measurements do not measure the specified pressures, then the conversion must be deactivated in order to avoid any errors.			

p1959[0...n]		Rotating measurement configuration / Rot meas config																																																														
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T Data type: Unsigned16 P-Group: Motor identification Not for motor type: REL Min -	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 1110 1110 0111 bin																																																													
Description:	Sets the configuration of the rotating measurement.																																																															
Recommendation:	A direction inhibit should not be activated for the rotating measurement (p1959.14 = 1 and p1959.15 = 1) as long as this can be done without incurring any danger. This means that the identification is complete and more accurate. When the direction inhibit is activated, the reluctance torque constant (p1959.7) is not identified and the angular commutation offset (p1959.10, p0431) is inaccurately determined. The reluctance torque constant (p1959.7) is also not identified in encoderless operation.

	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 0001 1111 bin		
Description:	Sets the configuration of the rotating measurement.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Enc test active	Yes	No	-
	01	Saturation characteristic identification	Yes	No	-
	02	Moment of inertia identification	Yes	No	-
	03	Re-calculates the speed controller parameters	Yes	No	-
	04	Speed controller optimization (vibration test)	Yes	No	-
	05	q leakage inductance ident. (for current controller adaptation)	Yes	No	-
	11	Do not change the controller parameters during the measurement	Yes	No	-
	12	Measurement shortened	Yes	No	-
	13	After measurement direct transition into operation	Yes	No	-
	14	Calculate speed actual value smoothing time	Yes	No	-
Dependency:	Refer to: F07988				
Note:	The encoder is only tested if the rotating measurement with encoder is selected (p1960 = 2). The following parameters are influenced for the individual optimization steps: Bit 00: None Bit 01: p0320, p0360, p0362 ... p0369 Bit 02: p0341, p0342 Bit 03: p1400.0, p1458, p1459, p1460, p1462, p1463, p1470, p1472, p1496 Bit 04: Dependent on p1960 Bit 05: p0391, p0392, p0393, p1402.2 only for induction motors p1960 = 1, 3: p1458, p1459, p1470, p1472, p1496, p1400.0 p1960 = 2, 4: p1458, p1459, p1460, p1462, p1496, p1461, p1463 The identification of the q leakage inductance can only be carried out for unloaded motors or motors with a low load (load approx. 30% below the rated motor torque). Only then is a current controller adaptation (p0391 ... p0393) parameterized if the q-leakage inductance under no-load conditions is at least 30 % higher than the total leakage inductance (p0356, p0358). For bit 11 = 1: Bits 02, 03, 04 no longer have any effect. It makes sense to set bit 11 if the speed controller and its adaptation were already set before the measurement. For bit 12 = 1: The selection only has an effect on the measurement p1960 = 1, 2. For the shortened measurement, the magnetizing current and moment of inertia are determined with a somewhat lower accuracy. For bit 13 = 1: After the measurement has been completed, the system immediately goes into closed-loop speed controlled operation.				

p1960	Moving measurement selection / Mov meas sel		
HLA	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-3	1	0
Description:	Activates the moving measurement.		
Value:	-3: Accept identified Ch parameters -1: Start data identification without Ch transfer 0: Inactive/cancel 1: Start data identification with transfer		
Dependency:	Refer to: p1955, p1956, p1957, p1958, p1961, r1961, r1962 Refer to: F07990, A07991, F07993		
Notice:	The drive moves after data identification with movement has been activated and enabled. In this case the force limiting is not active. If it is not permissible that the complete traversing range is traversed, then the following must be executed before the start: - deselect automatic traversing range detection (p1959.3 = 0). - deselect automatic piston calibration (p1959.2 = 0). - calibrate the piston manually. - manually enter the traversing range limits (p1956). For the identification of the characteristic (p1959.4), the velocities are traversed up to the maximum velocity, depending on the setting in p1955[0...1].		

p1960	Rotating measurement selection / Rot meas sel		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-3	1	0
Description:	Activates the rotating measurement.		
Value:	-3: Accept identified parameters -2: Acknowledge encoder inversion actual value (F07993) -1: Start motor data identification without acceptance 0: Inactive/inhibit 1: Start motor data identification with acceptance		
Recommendation:	Before carrying out the rotation measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger. The commutation angle and the direction are also determined. Motor data identification is not required for catalog motors and DRIVE-CLiQ motors. It is recommended to increase the torque accuracy or for third-party motors.		
Dependency:	Refer to: r1934, r1935, r1936, r1937, r1938, r1939, r1947, r1948, p1958, p1959, r1962, r1963, r1969 Refer to: F07990, A07991, F07993		
Danger:	For the rotating measurement, the motor is accelerated up to the maximum speed. Only the parameterized current limit (p0640) and the maximum speed (p1082) are effective.  The behavior of the motor can be influenced using the direction inhibit (p1959.14, p1959.15) and the ramp-up/ramp-down time (p1958).		
Notice:	If there is a motor holding brake, it must be open (p1215 = 2). To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).		
Note:	The rotating measurement can only be selected when the pulses of all of the drive objects of the Control Unit have been suppressed. After selection, all of the other drive objects of the Control Unit are interlocked so that they cannot be switched on until the rotating measurement has been completed or de-selected. When the rotating measurement is activated (p1960 = 1), it is not possible to save the parameters (p0971, p0977).		

p1960		Moving measurement selection / Mov meas sel		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Motor identification	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-3	1	0	
Description:	Activates the moving measurement.			
Value:	-3: Accept identified parameters -2: Acknowledge encoder inversion actual value (F07993) -1: Start motor data identification without acceptance 0: Inactive/inhibit 1: Start motor data identification with acceptance			
Recommendation:	Before carrying out the rotation measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger. The commutation angle and the direction are also determined. Motor data identification is not required for catalog motors and DRIVE-CLiQ motors. It is recommended to increase the torque accuracy or for third-party motors.			
Dependency:	Refer to: r1934, r1935, r1936, r1937, r1938, r1939, r1947, r1948, p1958, p1959, r1962, r1963, r1969 Refer to: F07990, A07991, F07993			
Danger:	For the moving measurement, the motor is accelerated up to the maximum velocity. Only the parameterized current limit (p0640) and the maximum velocity (p1082) are effective. The behavior of the motor can be influenced using the direction inhibit (p1959.14, p1959.15) and the ramp-up/ramp-down time (p1958).			
				
Notice:	If there is a motor holding brake, it must be open (p1215 = 2). To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).			
Note:	The moving measurement can only be selected when the pulses of all of the drive objects of the Control Unit have been suppressed. After selection, all of the other drive objects of the Control Unit are interlocked so that they cannot be switched on until the moving measurement has been completed or de-selected. When the moving measurement is activated (p1960 = 1), it is not possible to save the parameters (p0971, p0977).			

p1960		Rotating measurement selection / Rot meas sel		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Motor identification	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	4	0	
Description:	Sets the rotating measurement. The rotating measurement is carried out after the next switch-on command. The setting possibilities of the parameter depend on the open-loop/closed-loop control mode (p1300). p1300 < 20 (U/f open-loop control): It is not possible to select rotating measurement or speed controller optimization. p1300 = 20, 22 (encoderless operation): Only rotating measurement or speed controller optimization can be selected in the encoderless mode. p1300 = 21, 23 (operation with encoder): Both versions (encoderless and with encoder) of the rotating measurement and speed controller optimization can be selected.			
Value:	0: Inhibited 1: Rotating measurement in encoderless operation 2: Rotating measurement with encoder 3: Speed controller optimization in encoderless operation 4: Speed controller optimization with encoder			

2 Parameters

2.2 List of parameters

- Dependency:** Before the rotating measurement is carried out, the motor data identification routine (p1900, p1910, r3925) should have already been done.
 In the simulation mode, a value of 1 cannot be written into the parameter.
 When selecting the rotating measurement, the drive data set changeover is suppressed.
 When selecting rotating measurement (with the exception for p1959.13 = 1) the following BICO parameters are set to standard values, and after the measurement has been completed, are reset back to the original parameter assignments:
 p1020 ... p1023, p1070, p1075, p1138, p1139, p1140 ... p1143, p1155, p1160, p1437, p1476, p1477
 Refer to: p1272, p1300, p1900, p1959, p1967, r1968
 Refer to: A07987
- Danger:**  For drives with a mechanical system that limits the distance moved, it must be ensured that this is not reached during the rotating measurement. If this is not the case, then it is not permissible that the measurement is carried out.
- Notice:** If there is a motor holding brake, it must be open (p1215 = 2).
 To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).
 During the rotating measurement it is not possible to save the parameters (p0971, p0977).
- Note:** When the rotating measurement is activated, it is not possible to save the parameters (p0971, p0977).
 Parameter changes are automatically made for the rotating measurement (e.g. p1120); this is the reason that up to the end of the measurement, and if no faults are present, no manual changes should be made.
 The ramp-up and ramp-down times (p1120, p1121) are limited, for the rotating measurement, to 900 s.
 For speed controller optimization with encoder (p1960 = 2, 4), the speed controller for encoderless operation is also pre-assigned (p1470, p1472).
 Depending on whether the speed controller optimization is carried out with or without encoder, different Kp/Tn adaptations of the speed controller are set (p1464, p1465). If the drive should be controlled with as well as without speed encoder, then we recommend the use of two drive data sets (p0180). These can then be executed with different speed controller adaptations.

r1961[0...511]	Valve identification voltage characteristic / Valve ID char U		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the voltage values for the valve characteristic.		
Dependency:	Refer to: p1955, p1956, p1957, p1958, p1960, r1962		
Note:	The valve characteristic consists of the value pairs from r1961 and r1962 with the same index.		

p1961	Saturation characteristic speed to determine / Sat_char n determ		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	26 [%]	75 [%]	40 [%]
Description:	Sets the speed to determine the saturation characteristic and the encoder test. The percentage value is referred to p0310 (rated motor frequency).		
Dependency:	Refer to: p0310, p1959 Refer to: F07983		
Note:	The saturation characteristics should be determined at an operating point with the lowest possible load.		

r1962[0...511]	Valve identification characteristic velocity / Valve ID char v		
HLA	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Displays the velocity values for the valve characteristic.		
Dependency:	Refer to: p1955, p1956, p1957, p1958, p1960, p1961, r1961		
Note:	The valve characteristic consists of the value pairs from r1961 and r1962 with the same index.		
r1962[0...9]	Saturation characteristic magnetizing current identified / Sat_char I_mag		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the magnetizing currents of the identified saturation characteristic. The values are referred to r0331.		
Dependency:	Refer to: p1959, p1960, r1963		
Note:	The saturation characteristic consists of the value pairs from p1962 and p1963 with the same index.		
r1962[0...4]	Saturation characteristic magnetizing current / Sat_char I_mag		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the magnetizing currents of the identified saturation characteristic. The values are referred to r0331. After they have been determined, the values are transferred to p0366 ... p0369.		
Index:	[0] = Value 1 [1] = Value 2 [2] = Value 3 [3] = Value 4 [4] = Value 5		
Dependency:	Refer to: r0331		
r1963[0...511]	Valve identification system pressure characteristic / Valve ID char pp		
HLA	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [bar]	- [bar]	- [bar]
Description:	Displays the system pressure actual values for the valve characteristic.		
Note:	The valve characteristic consists of the value pairs from r1961 and r1963 with the same index.		

2 Parameters

2.2 List of parameters

r1963[0...9]	Saturation characteristic stator flux identified / Sat_char flux		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: PMSM, REL Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the stator flux of the identified saturation characteristic. The values are referred to the stator flux at the magnetizing current (r0331).		
Dependency:	Refer to: p1959, p1960, r1962		
Note:	The saturation characteristic consists of the value pairs from p1962 and p1963 with the same index.		
<hr/>			
r1963[0...4]	Saturation characteristic magnetizing inductance / Sat_char L_main		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: PMSM, REL Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the magnetizing inductances of the identified saturation characteristic. The values are referred to r0382.		
Index:	[0] = Value 1 [1] = Value 2 [2] = Value 3 [3] = Value 4 [4] = Value 5		
Dependency:	Refer to: r0382		
<hr/>			
r1964[0...511]	Valve identification characteristic force / Valve ID char F		
HLA	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min - [N]	Calculated: - Dyn. index: - Unit group: 8_1 Scaling: - Max - [N]	Access level: 4 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [N]
Description:	Displays the force actual values for the valve characteristic.		
Note:	The valve characteristic consists of the value pairs from r1961 and r1964 with the same index.		
<hr/>			
r1964[0...4]	Saturation characteristic rotor flux / Sat_char rot flux		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: PMSM, REL Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the rotor flux values of the identified saturation characteristic. After they have been determined, the values are transferred to p0362 ... p0365.		
Index:	[0] = Value 1 [1] = Value 2 [2] = Value 3 [3] = Value 4 [4] = Value 5		

p1965	Speed_ctrl_opt speed / n_opt speed		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: REL Min 10 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 75 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 40 [%]
Description:	Sets the speed for the identification of the moment of inertia and the vibration test. Induction motor: The percentage value is referred to p0310 (rated motor frequency). Synchronous motor: The percentage value is referred to the minimum from p0310 (rated motor frequency) and p1082 (maximum speed).		
Dependency:	Refer to: p0310, p1959 Refer to: F07984, F07985		
Note:	In order to calculate the inertia, sudden speed changes are carried out - the specified value corresponds to the lower speed setpoint. This value is increased by 20 % for the upper speed value. The q leakage inductance (refer to p1959.5) is determined at zero speed and at 50 % of p1965 - however, with a maximum output frequency of 15 Hz and at a minimum of 10% of the rated motor speed.		
p1967	Speed_ctrl_opt dynamic factor / n_opt dyn_factor		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: REL Min 1 [%]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 400 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100 [%]
Description:	Sets the dynamic response factor for speed controller optimization. After optimization, the dynamic response achieved is displayed in r1968.		
Dependency:	Refer to: p1959, r1968 Refer to: F07985		
Note:	For a rotating measurement, this parameter can be used to optimize the speed controller. p1967 = 100 % --> speed controller optimization according to a symmetric optimum. p1967 > 100 % --> optimization with a higher dynamic response (Kp higher, Tn lower). If the actual dynamic response (see r1968) is significantly reduced with respect to the required dynamic response (p1967), then this can be as a result of mechanical load oscillations. If, in spite of this load behavior, a higher dynamic response is required, then the oscillation test (p1959.4 = 0) should be deactivated and the measurement repeated.		
r1968	Speed_ctrl_opt dynamic factor actual / n_opt dyn_fact act		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: REL Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the dynamic factor which is actually achieved for the vibration test		
Dependency:	Refer to: p1959, p1967 Refer to: F07985		
Note:	This dynamic factor only refers to the control mode of the speed controller set in p1960.		

2 Parameters

	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: 25_1	Unit selection: p0100
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [kgm ²]	- [kgm ²]	- [kgm ²]
Description:	Displays the determined moment of inertia of the drive. After it has been determined, the value is transferred to p0341, p0342.		
Dependency:	IEC drives (p0100 = 0): unit kg m ² NEMA drives (p0100 = 1): unit lb ft ² Refer to: p0341, p0342, p1959 Refer to: F07984		

r1970[0...1]	Speed_ctrl_opt vibration test vibration frequency determined / n_opt f_vib det		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Hz]	- [Hz]	- [Hz]
Description:	Displays the vibration frequencies determined by the vibration test.		
Index:	[0] = Frequency low [1] = Frequency high		
Dependency:	Refer to: p1959 Refer to: F07985		

r1971[0...1]	Speed_ctrl_opt vibration test standard deviation determined / n_opt std_dev det		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Hz]	- [Hz]	- [Hz]
Description:	Displays the standard deviations of the vibration frequencies determined by the vibration test		
Index:	[0] = Standard deviation of low frequency [1] = Standard deviation of high frequency		
Dependency:	Refer to: p1959 Refer to: F07985		
r1972[0...1]	Speed_ctrl_opt vibration test number of periods determined / n_opt per_qty det		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the period number determined by the vibration test.		
Index:	[0] = No. of periods of the low frequency [1] = No. of periods of the high frequency		
Dependency:	Refer to: p1959 Refer to: F07985		
r1973[0...1]	Encoder pulse number identified / Pulse No. ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Index 0: Rotating motors: Displays the identified encoder pulse number (per revolution). Linear motors: Encoder pulse number per meter. Grid division = 1/p1973 [meter]. Index 1: Rotating motors: No significance. Linear motors: Identified grid division in nm.		
Index:	[0] = Rotating motor encoder pulse number [1] = Linear motor grid division in nm		
Notice:	Due to the measuring accuracy (approx. 5 %) only the approximate value is shown in p1973 and may not be directly transferred into p0407 or p0408. An incorrect pole pair number (r0313, p0314) or pole pair width (p0315) results in an incorrect value in p1973.		
Note:	A negative signal indicates an incorrect polarity of the encoder signal.		

2 Parameters

2.2 List of parameters

r1973	Rotating measurement encoder test pulse number determined / n_opt puls no. det		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: -

p1980[0...n]	PoIID technique / PoIID technique		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	99	99

Description: Sets the pole position identification technique.

Value:
 0: Saturation-based 1st + 2nd harmonic
 1: Saturation-based 1st harmonic
 4: Saturation based 2-stage

	10: Motion-based
	20: Elasticity-based
	99: No technique selected
Dependency:	Refer to: p0325, p0329, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997, p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097 Refer to: F07995
Notice:	If the incorrect technique is applied, this can cause the motor to accelerate in an uncontrolled fashion. Under the following conditions, the integral time must be disabled (p1996 = 0): - p1980 = 10 (motion-based) - motor encoder with track A/B sq-wave (p0404.3 = 1) - p0430.20 = 0 (flank time measurement) Once the integral time has been disabled, the motion is increased during the identification (a minimum of 90 ° electrical). As a result of this, the maximum distance (p1981) must also be increased.
Note:	PolID: Pole position identification When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used. The following applies for 1FN3 motors: A technique with 2nd harmonic may not be used (do not use p1980 = 0, 4). For 1FK7 motors, the following applies: A two-stage technique may not be used (do not use p1980 = 4). The automatically set value in p0329 may not be changed.

p1980[0...n]	PolID technique / PolID technique		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: ASM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	12	4
Description:	Sets the pole position identification technique. The current magnitudes are limited to the rated power unit values. p1980 = 1, 8: The current magnitude is set using p0329. p1980 = 4, 6: The current magnitude of the first measurement section is set using p0325, the second using p0329. p1980 = 10: The rated motor current is impressed to align. p1980 = 12: The induced stator voltage is sensed using a VSM and evaluated. This rotor position identification technique can only be used for separately excited synchronous motors with incremental encoder.		
Value:	1: Voltage pulsing 1st harmonic 4: Voltage pulsing 2-stage 6: Voltage pulsing 2-stage inverse 8: Voltage pulsing 2nd harmonic, inverse 10: DC current injection 12: Rotor position sensing with VSM for SESM w/ incremental encoder		
Dependency:	When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used. In the simulation mode, the parameter cannot be written into. Refer to: p0325, p0329, p1272, p1780 Refer to: F07969		
Note:	For p1980 = 1, 4, 6, 8: Voltage pulse technique cannot be applied to separately excited synchronous motors (p0300 = 5) and for for operation with sine-wave output filters (p0230). For p1980 = 12: This technique can only be applied for separately excited synchronous motors (SESM) with voltage measurement (VSM). The rotor position identification technique (p1980 = 12) cannot be used for permanent-magnet synchronous motors.

2.2 List of parameters

p1981[0...n]	PolID distance max / PolID distance max		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0 [°]	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 180 [°]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10 [°]
Description:	Sets the maximum distance (electrical angle) when carrying out the pole position identification routine. If this distance (travel) is exceeded, an appropriate fault is output.		
Dependency:	Refer to: p0325, p0329, p1980, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997 Refer to: F07995		
Notice:	Value = 180 °: Monitoring is deactivated.		
Note:	PolID: Pole position identification		
p1982[0...n]	PolID selection / PolID selection		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T Data type: Integer16 P-Group: Motor identification Not for motor type: - Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Activates the pole position identification routine to determine the commutation angle and to carry out a plausibility check.		
Value:	0: Pole position identification off 1: Pole position identification for commutation 2: Pole position identification for plausibility check		
Recommendation:	For p1982 = 1: This is used for synchronous motors with motor encoder without absolute data. The information/data regarding the absolute commutation angle is supplied via a track C/D, Hall sensors, an absolute encoder or from the pole position identification routine. For p1982 = 2: This is used for synchronous motor with motor encoder with absolute data to check this data.		
Dependency:	Refer to: p0325, p0329, p1980, p1981, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997, p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097		
Note:	PolID: Pole position identification		
p1982[0...n]	PolID selection / PolID selection		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T Data type: Integer16 P-Group: Motor identification Not for motor type: - Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Activates the pole position identification routine to determine the commutation angle and to carry out a plausibility check.		
Value:	0: Pole position identification off 1: Pole position identification for commutation 2: Pole position identification for plausibility check		

Recommendation:	For p1982 = 1: This is used for synchronous motors with motor encoder without absolute data. The information/data regarding the absolute commutation angle is supplied via a track C/D, Hall sensors, an absolute encoder or from the pole position identification routine. For separately excited synchronous motors, the position identification is realized using the voltage measurement of a Voltage Sensing Module VSM (p1980 = 12). If there is no VSM then the setting is not possible. For p1982 = 2: This is used for synchronous motor with motor encoder with absolute data to check this data. With p1982 = 2, each time the pulses are enabled it is checked whether the absolute position supplied from the encoder does not exceed a deviation of 45 degrees to the identified pole wheel position. Not possible for separately excited synchronous motors.
Dependency:	Refer to: p0325, p0329, p1980, p1981, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997, p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097
Note:	For encoderless operation, the pole position identification routine is selected with p1780.6

p1983	PoIID test / PoIID test		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Starts the pole position identification routine for test purposes. p1983 = 1: Start of pole position identification. The parameter is set to zero automatically on completion of the identification process.		
Dependency:	Refer to: p0325, p0329, p1980, p1981, p1982, r1984, r1985, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997, p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097		
Notice:	For p1983 = 1 and if the pulses are not enabled, then the function is only executed the next time that the pulses are enabled.		
Note:	When this test is executed, it does not influence the commutation angle.		

r1984	PoIID angular difference / PoIID ang diff		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the angular difference between the actual electrical commutation angle and the angle determined by the pole position identification.		
Dependency:	Refer to: p0325, p0329, p1980, p1981, p1982, p1983, r1985, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997, p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097		
Note:	PoIID: Pole position identification When the pole position identification routine is executed several times using p1983, the spread of the measured values can be determined using this value. At the same position, the spread should be less than 2 degrees electrical.		

2 Parameters

2.2 List of parameters

r1985	Chld v/U characteristic velocity measured / Chld v/U v meas		
HLA	Can be changed: -	Calculated: -	Access level: 3

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the saturation characteristic of the pole position identification routine (saturation technique). Displays the current characteristic of the pole position identification routine (elasticity technique).		
Dependency:	Refer to: p0325, p0329, p1980, p1981, p1982, p1983, r1984, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997, p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097		
Note:	PoIID: Pole position identification Regarding the saturation technique: The values for the characteristic of the last saturation-based pole position identification routine are output every 1 ms in order to record signals (e.g. trace).		

r1986	Chld v/U characteristic velocity parameterized / Chld v/U v par		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Displays the parameterized v/U characteristics in m/min.		
Dependency:	Refer to: p1960, p3030, p3031, p3033, p3034, p3035, p3036, p3037, p3038, p3039, p3040, p3041, p3042, p3043, p3044, p3045, p3046, p3047, p3048, p3075		
Note:	The values for the characteristic of the last identification routine are output every 1 ms in order to record signals (e.g. trace).		

r1986	PoIID saturation characteristic 2 / PoleID sat_curve 2		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the pole position characteristic of the elasticity-based pole position identification routine. The values for the characteristic of the last pole position identification routine are output every 1 ms in order to record signals (e.g. trace).		
Dependency:	Refer to: p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097		
Note:	PoIID: Pole position identification		

r1987	Chld v/U characteristic voltage / Chld v/U U		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the voltage of the v/U characteristics in V unit.		
Dependency:	Refer to: p1960		
Note:	The values for the characteristic of the last identification routine are output every 1 ms in order to record signals (e.g. trace).		
r1987	PoIID trigger characteristic / PoIID trig_char		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the trigger characteristic of the pole position identification routine. The values for the characteristic of the last pole position identification routine are output every 1 ms in order to record signals (e.g. trace). The values for trigger characteristic and saturation characteristic are always output in synchronism from a time perspective.		
Dependency:	Refer to: p0325, p0329, p1980, p1981, p1982, p1983, r1984, r1985, r1986, p1990, r1992, p1993, p1994, p1995, p1996, p1997, p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097		
Note:	PoIID: Pole position identification The following information and data can be taken from the trigger characteristic. - the value -100% marks the angle at the start of the measurement. - the value +100 % marks the commutation angle determined from the pole position identification routine.		
p1990	Encoder adjustment determine angular commutation offset / Enc_adj det ang		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	This function is only required for synchronous motors and can be started when commissioning for the first time or after replacing an encoder. The function acts on the active motor data set. When adjusting the encoder, the angular commutation offset is determined and transferred into p0431. Alarm A07971 is output while the angular commutation offset is being determined. p1990 is automatically set to 0 after the angular commutation offset has been determined. p1990 = 0: Deactivated p1990 = 1: Activated with transfer		
Dependency:	Refer to: p0325, p0329, p0431, p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1999 Refer to: A07971		
Danger:	For recommendation 3: When performing this measurement there is a danger of coming into contact with system parts that are at a high (hazardous) electrical voltage. This measurement may only be performed by authorized service personnel.		
			

Warning:

The motor can move in an uncontrolled fashion.

To determine the angular commutation offset, pulses must be immediately enabled after p1990 = 1. For commutation with a zero mark - or with distance-coded zero marks - the drive must also be traversed over the zero mark or over two zero marks. If a POWER ON is carried out before activating the pulse enable and where relevant before passing the zero mark, then after powering up p1990 = 0, and the commutation angle is not determined.

Notice:

Parameter p1990 can only be set when the pulse enable is deactivated. For p1990 = 1 the function is only executed the next time that the pulses are enabled.

In order to prevent an incorrect orientation of the electrical pole position (uncontrolled motor movement), the automatically determined angular commutation offset (p0431) should, for reasons of safety, be checked using one of the following recommendations:

Recommendation 1:

Set encoderless operation (p1300 = 20 or p1404 = 0), de-select pole position identification (p1982 = 0), operate under no-load conditions with a speed > p1755, correct the actual value inversion (p0410.0) (e.g. r0061 = r0063), read the angular error in r1778; the result in r1778 should be approximately 0, for |r1778| > 2 degrees, add the value to p0431 - taking into account the sign - and enter in p0431.

Recommendation 2:

Set the current limit to 0 (p0640 = 0), activate travel to fixed stop (p1545 = 1), record r0089[0] (phase voltage) and r0093 (electrically scaled pole position) (e.g. trace) while the motor is externally moved; in this case, the rising zero crossover of the phase voltage must coincide with the 360 ° --> 0 ° step (jump) from r0093.

Recommendation 3:

Measure the phase voltage U (measure phase U with respect to the virtual star point using 3 resistors) and r0093 (electrically scaled pole position); the rising zero crossover of the phase voltage must coincide with the 360 ° --> 0 ° step (jump) of r0093.

Recommendation 4:

Determine the average value from several results of a pole position identification routine executed as test (p1983) at various electrical angles and add the value to p0431 - taking into account the sign and enter into p0431.

Note:

If fault F07414 is present, the following applies:

First set p1990 to 1, then acknowledge the fault and then issue the enable signals.

Max

Factory setting

0

3

0

Description:

This function is only required for synchronous motors and can be started when commissioning for the first time or after replacing an encoder. The function acts on the active motor data set.

Alarm A07971 is output while the angular commutation offset is being determined. p1990 is automatically set to 0 after the angular commutation offset has been determined.

For p1990 = 1 (encoder adjustment with transfer), the following applies:

The angular commutation offset is determined and transferred into p0431.

For p1990 = 2 (encoder adjustment for checking), the following applies:

The angular commutation offset is determined and is not transferred into p0431. For a deviation of more than 6 ° electrical, fault F07413 is output.

For p1990 = 3 (encoder adjustment in operation), the following applies:

PolID procedure runs before the zero mark detection. The angular commutation offset is determined and transferred into p0431. A fine adjustment (p1905) is then optionally possible.

Value:

- 0: Deactivated
- 1: Activated with transfer
- 2: Activated for checking
- 3: Activates encoder adjustment in operation

Dependency:

In the simulation mode, the parameter cannot be written into.

When selecting the encoder adjustment, the changeover of the drive data sets is suppressed.

Encoder adjustment is only carried out if the function module for "speed/torque control" is activated (r0108.2 = 1).

Refer to: p0325, p0329, p0431, p1272, p1900

Caution:

When the encoder is being adjusted, the motor must be operated without a load - and if a motor holding brake is being used, this must be opened.

Description:	Displays the reference quantity for power. All power ratings specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).		

2 Parameters

2.2 List of parameters

Dependency: This value is calculated as follows:
 Calculated from the torque x speed (rotating) or from the force x velocity (linear).
 Refer to: p2000, p2001, p2002, p2003

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
 The reference power is calculated as follows:
 - $2 * \text{Pi} * \text{reference speed} / 60 * \text{reference torque}$ (rotating)
 - $\text{reference velocity} / 60 * \text{reference force}$ (linear)

r2004 Reference power / P_ref

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: - Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min - [kW]	Calculated: - Dyn. index: - Unit group: 14_10 Scaling: - Max - [kW]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [kW]
---	---	---	--

Description: Displays the reference quantity for power.
 All power ratings specified as relative value are referred to this reference quantity.
 The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Dependency: This value is calculated as follows:
 Infeed: Calculated from voltage times current.
 Closed-loop control: Calculated from torque times speed.
 Refer to: p2000, p2001, p2002, p2003

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
 The reference power is calculated as follows:
 - $2 * \text{Pi} * \text{reference speed} / 60 * \text{reference torque}$ (motor)
 - $\text{reference voltage} * \text{reference current} * \text{root}(3)$ (infeed)

p2005 Reference angle / Reference angle

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 90.00 [°]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 180.00 [°]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 90.00 [°]
--	--	--	---

Description: Sets the reference quantity for angle.
 All angles specified as relative value are referred to this reference quantity.
 The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.
 If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

p2006 Reference temp / Ref temp

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM120, TM150	Can be changed: T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 50.00 [°C]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 300.00 [°C]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [°C]
---	---	---	---

Description: Sets the reference quantity for temperature.
 All temperatures specified as relative value are referred to this reference quantity.
 The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

p2007	Reference acceleration / a_ref		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41	Can be changed: T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 0.01 [rev/s ²]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 500000.00 [rev/s ²]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.01 [rev/s ²]
Description:	Sets the reference quantity for acceleration rates. All acceleration rates specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).		
Note:	For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1. If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor. The reference acceleration is calculated as follows: Reference speed (p2000) converted from 1/min to 1/s divided by 1 s --> p2007 = p2000 [rpm] / (60 [s/min] * 1 [s])		
p2007	Reference acceleration / a_ref		
SERVO (Lin), HLA, SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 0.01 [m/s ²]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: 22_1 Scaling: - Max 10000.00 [m/s ²]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 0.01 [m/s ²]
Description:	Sets the reference quantity for acceleration rates. All acceleration rates specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).		
Note:	For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1. If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor. The reference acceleration is calculated as follows: Reference speed (p2000) converted from 1/min to 1/s divided by 1 s --> p2007 = p2000 [rpm] / (60 [s/min] * 1 [s])		
r2019[0...7]	Comm IF error statistics / Comm err		
CU_I, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Communications Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the receive errors at the commissioning interface (RS232).		
Index:	[0] = Number of error-free telegrams [1] = Number of rejected telegrams [2] = Number of framing errors [3] = Number of overrun errors [4] = Number of parity errors [5] = Number of starting character errors [6] = Number of checksum errors [7] = Number of length errors		

2 Parameters

2.2 List of parameters

p2020	Field bus interface baud rate / Field bus baud		
CU_S_AC_DP, CU_S120_DP, CU_S150_DP	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	4	8	8
Description:	Sets the baud rate for the fieldbus interface USS.		
Value:	4: 2400 baud 5: 4800 baud 6: 9600 baud 7: 19200 baud 8: 38400 baud		
Note:	Fieldbus IF: Fieldbus interface Changes only become effective after POWER ON. The parameter is not influenced by setting the factory setting. The parameter is set to the factory setting when the protocol is reselected.		

p2021	Field bus interface address / Field bus address		
CU_S_AC_DP, CU_S120_DP, CU_S150_DP	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9310
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	31	0
Description:	Displays or sets the address for the fieldbus interface USS. The address can be set as follows: 1) Using the address switch on the Control Unit. --> p2021 displays the address setting. --> A change only becomes effective after a POWER ON. 2) Using p2021 --> Only if an address of 0 or an address that is invalid for the fieldbus selected in p2030 has been set using the address switch. --> The address is saved in a non-volatile fashion using the function "copy from RAM to ROM". --> A change only becomes effective after a POWER ON.		
Dependency:	Refer to: p2030		
Note:	Changes only become effective after POWER ON. The parameter is not influenced by setting the factory setting. The parameter is set to the factory setting when the protocol is reselected.		

p2022	Field bus int USS PZD no. / Field bus USS PZD		
CU_S_AC_DP, CU_S120_DP, CU_S150_DP	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9310
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	16	2
Description:	Sets the number of 16-bit words in the PZD part of the USS telegram for the field bus interface.		
Dependency:	Refer to: p2030		
Note:	The parameter is not influenced by setting the factory setting.		

p2023	Field bus int USS PKW no. / Field bus USS PKW		
CU_S_AC_DP, CU_S120_DP, CU_S150_DP	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: 9310
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	127	127

Description: Sets the number of 16-bit words in the PKW part of the USS telegram for the field bus interface.

Value:
0: PKW 0 words
3: PKW 3 words
4: PKW 4 words
127: PKW variable

Dependency: Refer to: p2030

Note: The parameter is not influenced by setting the factory setting.

p2024[0...2]	Fieldbus interface times / Fieldbus times		
CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9310
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	10000 [ms]	[0] 1000 [ms] [1] 0 [ms] [2] 0 [ms]

Description: Sets the time values for the fieldbus interface.
For Modbus the following applies:
p2024[0, 1]: Not relevant.
p2024[2]: Telegram pause time (pause time between two telegrams).

Index:
[0] = Max. processing time
[1] = Character delay time
[2] = Telegram pause time

Dependency: Refer to: p2020, p2030

Note: For p2024[2] (Modbus):
If the field bus baud rate is changed (p2020), the default time setting is restored.
The default setting corresponds to a time of 3.5 characters (dependent on the baud rate that has been set).

r2029[0...7]	Field bus int error statistics / Field bus error		
CU_S_AC_DP, CU_S120_DP, CU_S150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9310
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the receive errors on the field bus interface (USS).

Index:
[0] = Number of error-free telegrams
[1] = Number of rejected telegrams
[2] = Number of framing errors
[3] = Number of overrun errors
[4] = Number of parity errors
[5] = Number of starting character errors
[6] = Number of checksum errors
[7] = Number of length errors

p2030	Field bus int protocol selection / Field bus protocol		
CU_S_AC_DP, CU_S120_DP, CU_S150_DP	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	3	6	3
Description:	Sets the communication protocol for the field bus interface.		
Value:	3: PROFIBUS 6: USS (X140)		
Note:	Changes only become effective after POWER ON. The parameter is not influenced by setting the factory setting.		

p2030	Field bus int protocol selection / Field bus protocol		
CU_S_AC_PN, CU_S120_PN, CU_S150_PN	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	7	13	7
Description:	Sets the communication protocol for the field bus interface.		
Value:	7: PROFINET 13: Modbus TCP		
Note:	Changes only become effective after POWER ON. The parameter is not influenced by setting the factory setting.		

r2032	Master control control word effective / PcCtrl STW eff				
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the effective control word 1 (STW1) of the drive for the master control.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	ON/OFF1	Yes	No	-
	01	OC / OFF2	Yes	No	-
	02	OC / OFF3	Yes	No	-
	03	Enable operation	Yes	No	-
	04	Enable ramp-function generator	Yes	No	-
	05	Start ramp-function generator	Yes	No	-
	06	Enable speed setpoint	Yes	No	-
	07	Acknowledge fault	Yes	No	-
	08	Jog bit 0	Yes	No	3030
	09	Jog bit 1	Yes	No	3030
	10	Master control by PLC	Yes	No	-
Notice:	The master control only influences control word 1 and speed setpoint 1. Other control word/setpoints can be transferred from another automation device.				
Note:	OC: Operating condition				

r2032		Master control control word effective / PcCtrl STW eff			
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the effective control word 1 (STW1) of the drive for the master control.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	ON/OFF1	Yes	No	-
	01	OC / OFF2	Yes	No	-
	02	OC / OFF3	Yes	No	-
	03	Enable operation	Yes	No	-
	04	Enable ramp-function generator	Yes	No	-
	05	Start ramp-function generator	Yes	No	-
	06	Enable velocity setpoint	Yes	No	-
	07	Acknowledge fault	Yes	No	-
	08	Jog bit 0	Yes	No	3030
	09	Jog bit 1	Yes	No	3030
	10	Master control by PLC	Yes	No	-
Notice:	The master control only influences control word 1 and speed setpoint 1. Other control word/setpoints can be transferred from another automation device.				
Note:	OC: Operating condition				

r2032		Master control control word effective / PcCtrl STW eff			
A_INF, S_INF, R_INF, B_INF	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the effective control word 1 (STW1) of the drive for the master control.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	ON/OFF1	Yes	No	-
	01	OC / OFF2	Yes	No	-
	03	Enable operation	Yes	No	-
	07	Acknowledge fault	Yes	No	-
	10	Master control by PLC	Yes	No	-
Notice:	The master control only influences control word 1 and speed setpoint 1. Other control word/setpoints can be transferred from another automation device.				
Note:	OC: Operating condition				

p2035		Fieldbus interface USS PIV drive object number / Fieldbus USS DO_no		
CU_S_AC_DP, CU_S120_DP, CU_S150_DP	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Communications	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	1	62	2	
Description:	Sets the drive object number for communication via the field bus interface (USS).			
Dependency:	Refer to: p0978			
Note:	p2035 defines the destination for USS parameter requests (PIV). p0978[0] defines the destination for USS process data (PZD). The parameter is available globally on all drive objects. The parameter is not influenced by setting the factory setting.			

2 Parameters

2.2 List of parameters

p2037	IF1 PROFIdrive STW1.10 = 0 mode / IF1 PD STW1.10=0		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41, ENC	Can be changed: T Data type: Integer16 P-Group: Communications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the processing mode for PROFIdrive STW1.10 "master control by PLC". Generally, control world 1 is received with the first receive word (PZD1) (this is in conformance to the PROFIdrive profile). The behavior of STW1.10 = 0 corresponds to that of the PROFIdrive profile. For other applications that deviate from this, the behavior can be adapted using this particular parameter.		
Value:	0: Freeze setpoints and continue to process sign-of-life 1: Freeze setpoints and sign-of-life 2: Do not freeze setpoints		
Recommendation:	Do not change the setting p2037 = 0.		
Note:	If the STW1 is not transferred according to the PROFIdrive with PZD1 (with bit 10 "master control by PLC"), then p2037 should be set to 2.		

p2038	IF1 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T Data type: Integer16 P-Group: Communications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Displays the interface mode of the PROFIdrive control words and status words.		
Value:	0: SINAMICS 1: SIMODRIVE 611 universal 2: VIK-NAMUR		
Dependency:	Refer to: p0922, p2079		
Notice:	The parameter is protected and cannot be changed.		
Note:	For telegram selection p0922 (p2079) = 102, 103, 105, 106, 116, 118, 125, 126, 136, 138, 139, then p2038 is automatically set = 1. When another telegram is selected, then p2038 is automatically set = 0.		

p2038	IF1 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode		
SERVO (EPOS, Position control), SERVO_AC (EPOS, Position control)	Can be changed: T Data type: Integer16 P-Group: Communications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 0	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Displays the interface mode of the PROFIdrive control words and status words.		
Value:	0: SINAMICS		
Dependency:	Refer to: p0922, p2079		
Notice:	The parameter is protected and cannot be changed.		

p2038	IF1 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	0
Description:	Displays the interface mode of the PROFIdrive control words and status words.		
Value:	0: SINAMICS 1: SIMODRIVE 611 universal 2: VIK-NAMUR		
Dependency:	Refer to: p0922, p2079		
Notice:	The parameter is protected and cannot be changed.		
Note:	For telegram selection p0922 (p2079) = 20, then p2038 is automatically set = 2. When another telegram is selected, then p2038 is automatically set = 0.		

p2038	IF1 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode		
VECTOR (EPOS, Position control), VECTOR_AC (EPOS, Position control)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	0	0
Description:	Displays the interface mode of the PROFIdrive control words and status words.		
Value:	0: SINAMICS		
Dependency:	Refer to: p0922, p2079		
Notice:	The parameter is protected and cannot be changed.		
Note:	For p0922 (p2079) = 7, 9, 110, 111, p2038 is automatically set to 0 and cannot be changed.		

p2039	Select debug monitor interface / Debug monit select		
CU_I, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	1
Description:	Sets the serial interface for the debug monitor. The serial interface for the debug monitor is COM1 (X140) or COM2 (internal). Value = 0: COM2 (internal) Value = 1: COM1 (X140), commissioning protocol is deactivated Value = 2: COM2 (internal) Value = 3: Reserved		

p2039	Select debug monitor interface / Debug monit select		
CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: U, T Data type: Unsigned16 P-Group: Communications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the serial interface for the debug monitor. The serial interface for the debug monitor is COM1 (X140) or COM2 (internal). Value = 0: COM2 (internal) Value = 1: COM1 (X140), commissioning protocol is deactivated Value = 2: COM2 (internal) Value = 3: Reserved		
p2040	COMM INT monitoring time / COMM INT t_monit		
CU_I, CU_NX_CX, CU_I_D410, CU_LINK	Can be changed: U, T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1999999 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 20 [ms]
Description:	Sets the monitoring time to monitor the process data received via the internal communications interface. If no process data is received within this time, then an appropriate message is output.		
Note:	Value = 0: Monitoring is deactivated.		
p2040	Fieldbus interface monitoring time / Fieldbus t_monit		
CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: U, T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1999999 [ms]	Access level: 3 Func. diagram: 9310 Unit selection: - Expert list: 1 Factory setting 100 [ms]
Description:	Sets the monitoring time to monitor the process data received via the fieldbus interface. If no process data is received within this time, then an appropriate message is output.		
Dependency:	Refer to: p2030		
Note:	The parameter is only relevant for the setting of the following fieldbus protocols. - USS (X140) (p2030 = 6) - Modbus TCP (p2030 = 13) Value = 0: Monitoring is deactivated.		
p2042	PROFIBUS Ident Number / PB ident No.		
CU_S_AC_DP, CU_S120_DP, CU_S150_DP	Can be changed: T Data type: Integer16 P-Group: Communications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the PROFIBUS ident number (PNO-ID). SINAMICS can be operated with various identities on PROFIBUS. This allows the use of a PROFIBUS GSD that is independent of the device (e.g. PROFIdrive VIK-NAMUR with ident number 3AA0 hex).		

Value: 0: SINAMICS
1: VIK-NAMUR

Note: Every change only becomes effective after a POWER ON.

r2043.0...2	BO: IF1 PROFIdrive PZD state / IF1 PD PZD state			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned8 P-Group: Communications Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2410 Unit selection: - Expert list: 1 Factory setting -	
Description:	Displays the PROFIdrive PZD state.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Setpoint failure	Yes	No
	01	Clock cycle synchronous operation active	Yes	No
	02	Fieldbus oper	Yes	No
Dependency:	Refer to: p2044			
Note:	When using the "setpoint failure" signal, the bus can be monitored and an application-specific response triggered when the setpoint fails.			

p2044	IF1 PROFIdrive fault delay / IF1 PD fault delay			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41, ENC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 0 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100 [s]	Access level: 3 Func. diagram: 2410 Unit selection: - Expert list: 1 Factory setting 0 [s]	
Description:	Sets the delay time to initiate fault F01910 after a setpoint failure. The time until the fault is initiated can be used by the application. This means that is is possible to respond to the failure while the drive is still operational (e.g. emergency retraction).			
Dependency:	Refer to: r2043			

p2045	CI: PB/PN clock synchronous controller sign-of-life signal source / PB/PN ctrSoL s_src			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, SERVO, VECTOR (n/M), HLA, SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M), TM41, ENC	Can be changed: T Data type: Unsigned32 / Integer16 P-Group: Communications Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2410 Unit selection: - Expert list: 1 Factory setting 0	
Description:	Connector input for the sign-of-life of the clock synchronous PROFIBUS/PROFINET controller. The sign-of-life is expected at bits 12 to 15. Bits 0 to 11 are not evaluated. The sign-of-life signal is normally received in PZD4 (control word 2) from the controller.			
Dependency:	Refer to: p0925, r2065			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.			

p2047	PROFIBUS additional monitoring time / PB suppl t_monit		
CU_S_AC_DP, CU_S120_DP, CU_S150_DP	Can be changed: U, T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 20000 [ms]	Access level: 3 Func. diagram: 2410 Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the additional monitoring time to monitor the process data received via PROFIBUS. Enables short bus faults to be compensated. If no process data is received within this time, then an appropriate message is output.		
Recommendation:	In the isochronous mode, the additional monitoring time should not be set.		
Note:	For controller STOP, the additional monitoring time is not effective.		

p2048	IF1 PROFIdrive PZD sampling time / IF1 PZD t_sample		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 1.00 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 4.00 [ms]
Description:	Sets the sampling time for the cyclic interface 1 (IF1).		
Note:	The system only permits certain sampling times and after writing to this parameter, displays the value that has actually been set. For clock cycle synchronous operation, the specified bus cycle time applies (Tdp).		

p2049	PROFIdrive isochronous operation asynchronous participation / Isochron async		
SERVO, VECTOR, SERVO_I_AC, VECTOR_I_AC	Can be changed: C1(3) Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting for asynchronous participation in isochronous operation. For p2049 = 1: The axis only asynchronously participates in isochronous PROFIdrive operation. The control sampling times of this axis are not included in the bus cycle time check (Tdp), in the time of the actual value sensing (Ti) and in the time of the setpoint sensing (To). For p2049 = 0: No effect on the setting in p0092.		
Value:	0: No 1: Yes		
Dependency:	Refer to: p0092		
Caution:	Restrictions for asynchronous participation in isochronous PROFIBUS operation: - the setpoints are effective at undefined instant in time (deviating from To). As a consequence, interpolating operation with other axes is not possible, for example. - the actual values are read at undefined instant in time (deviating from Ti). As a consequence, the actual values cannot be used to control other axes, for example.

	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4	-
Description:	Status display for the PROFIBUS interface.		
Value:	0: OFF 1: No connection (search for baud rate) 2: Connection OK (baud rate found) 3: Cyclic connection with master (data exchange) 4: Cyclic data OK		
Note:	For r2054 = 3: In state 3 (the LED flashes green), a cyclic connection has been established to the PROFIBUS master; however, one of the following prerequisites is missing for cyclic operation: - no setpoints are being received as the PROFIBUS master is in the STOP condition. Only for clock-cycle synchronous operation, the following applies: - the drive is not in synchronism as the global control (GC) has an error. For r2054 = 4: In the status 4 (LED green), the cyclic connection to the PROFIBUS master has been established and setpoints are being received. The clock cycle synchronization is OK, the global control (GC) is error-free. This state does not provide any statement regarding the quality of the clock cycle synchronous sign-of-life characters on the drive objects.		

r2055[0...2]	PROFIBUS diagnostics standard / PB diag standard

p2098[0...1]	Inverter connector-binector converter binector output / Con/bin outp inv		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM15DI_DO, TM120, TM150, TB30, ENC	Can be changed: U, T Data type: Unsigned16 P-Group: Communications Not for motor type: - Min	Calculated: - Dyn. index: - Unit group: - Scaling: - Max	Access level: 3 Func. diagram: 2468 Unit selection: - Expert list: 1 Factory setting 0000 0000 0000 0000 bin

Description: Setting to invert the individual binector outputs of the connector-binector converter.
Using p2098[0], the signals of connector input p2099[0] are influenced.
Using p2098[1], the signals of connector input p2099[1] are influenced.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Bit 0	Inverted	Not inverted	-
	01	Bit 1	Inverted	Not inverted	-
	02	Bit 2	Inverted	Not inverted	-
	03	Bit 3	Inverted	Not inverted	-
	04	Bit 4	Inverted	Not inverted	-
	05	Bit 5	Inverted	Not inverted	-
	06	Bit 6	Inverted	Not inverted	-
	07	Bit 7	Inverted	Not inverted	-
	08	Bit 8	Inverted	Not inverted	-
	09	Bit 9	Inverted	Not inverted	-
	10	Bit 10	Inverted	Not inverted	-
	11	Bit 11	Inverted	Not inverted	-
	12	Bit 12	Inverted	Not inverted	-
	13	Bit 13	Inverted	Not inverted	-
	14	Bit 14	Inverted	Not inverted	-
	15	Bit 15	Inverted	Not inverted	-

Dependency: Refer to: r2094, r2095, p2099

p2099[0...1]	CI: Connector-binector converter signal source / Con/bin S_src		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM15DI_DO, TM120, TM150, TB30, ENC	Can be changed: U, T Data type: Unsigned32 / Integer16 P-Group: Communications Not for motor type: - Min	Calculated: - Dyn. index: - Unit group: - Scaling: - Max	Access level: 3 Func. diagram: 2468 Unit selection: - Expert list: 1 Factory setting 0

Description: Sets the signal source for the connector-binector converter.
A PZD receive word can be selected as signal source. The signals are available to be serially passed-on (interconnection).

Dependency: Refer to: r2094, r2095

Note: From the signal source set via the connector input, the corresponding lower 16 bits are converted. p2099[0...1] together with r2094.0...15 and r2095.0...15 forms two connector-binector converters:
Connector input p2099[0] to binector output in r2094.0...15
Connector input p2099[1] to binector output in r2095.0...15

p2100[0...19] Change fault response fault number / Chng resp F_no

All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8075
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0

Description: Selects the faults for which the fault response should be changed

Dependency: The fault is selected and the required response is set under the same index.

Refer to: p2101

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2101[0...19] Change fault response response / Chng resp resp

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 8050, 8075
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	0	0

Description: Sets the fault response for the selected fault.

Value: 0: NONE

Dependency: The fault is selected and the required response is set under the same index.

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:

- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2101[0...19] Change fault response response / Chng resp resp

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 8050, 8075
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	7	0

Description: Sets the fault response for the selected fault.

Value: 0: NONE
1: OFF1
2: OFF2
3: OFF3

2 Parameters

2.2 List of parameters

- 5: STOP2
- 6: Internal armature short-circuit / DC braking
- 7: ENCODER (p0491)

Dependency: The fault is selected and the required response is set under the same index.
Refer to: p2100

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:

- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

The fault response can only be changed for faults with the appropriate identification (see the List Manual, chapter "Faults and alarms").

Example:

F12345 and fault response = OFF3 (OFF1, OFF2, NONE)

--> The default fault response OFF3 can be changed to OFF1, OFF2 or NONE.

For value = 1 (OFF1):

Braking along the ramp-function generator down ramp followed by a pulse inhibit.

For value = 2 (OFF2):

Internal/external pulse inhibit.

For value = 3 (OFF3):

Braking along the OFF3 down ramp followed by a pulse inhibit.

For value = 5 (STOP2):

n_set = 0

For value = 6 (armature short-circuit, internal/DC braking):

The value can only be set for all motor data sets when p1231 = 3, 4.

a) For synchronous motors (p0300 = 2xx, 4xx), an internal armature short-circuit is executed.

b) For induction motors (p0300 = 1xx), a DC braking is initiated.

For value = 7 (ENCODER (p0491)):

The fault response set in p0491 is executed if applicable.

Note:

IASC: Internal Armature Short Circuit

DCBRK: DC braking

p2101[0...19] Change fault response response / Chng resp resp

A_INF, S_INF, R_INF, B_INF	Can be changed: U, T Data type: Integer16 P-Group: Messages Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: 8050, 8075 Unit selection: - Expert list: 1 Factory setting 0
-------------------------------	---	--	--

Description: Sets the fault response for the selected fault.

Value:

- 0: NONE
- 1: OFF1
- 2: OFF2

Dependency: The fault is selected and the required response is set under the same index.

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:

- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

Description:	Sets the third signal source to acknowledge faults.		
Note:	A fault acknowledgment is triggered with a 0/1 signal.		
p2105[0...n]	BI: 3rd acknowledge faults / 3rd acknowledge		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546, 8060 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the third signal source to acknowledge faults.		
Note:	A fault acknowledgment is triggered with a 0/1 signal.		

p2106	BI: External fault 1 / External fault 1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external fault 1.		
Dependency:	Refer to: F07860		
Note:	An external fault is triggered with a 0 signal. If this fault is output at the Control Unit, then it is transferred to all existing drive objects.		
p2106[0...n]	BI: External fault 1 / External fault 1		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external fault 1.		
Dependency:	Refer to: F07860		
Note:	An external fault is triggered with a 0 signal. If this fault is output at the Control Unit, then it is transferred to all existing drive objects.		
p2107	BI: External fault 2 / External fault 2		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external fault 2.		
Dependency:	Refer to: F07861		
Note:	An external fault is triggered with a 0 signal. If this fault is output at the Control Unit, then it is transferred to all existing drive objects.		

2 Parameters

2.2 List of parameters

p2107[0...n]	BI: External fault 2 / External fault 2		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external fault 2.		
Dependency:	Refer to: F07861		
Note:	An external fault is triggered with a 0 signal. If this fault is output at the Control Unit, then it is transferred to all existing drive objects.		

p2108	BI: External fault 3 / External fault 3		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external fault 3. External fault 3 is initiated by the following AND logic operation: - BI: p2108 negated - BI: p3111 - BI: p3112 negated		
Dependency:	Refer to: p3110, p3111, p3112 Refer to: F07862		
Note:	An external fault is triggered with a 0 signal. If this fault is output at the Control Unit, then it is transferred to all existing drive objects.		

p2108[0...n]	BI: External fault 3 / External fault 3		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external fault 3. External fault 3 is initiated by the following AND logic operation: - BI: p2108 negated - BI: p3111 - BI: p3112 negated		
Dependency:	Refer to: p3110, p3111, p3112 Refer to: F07862		
Note:	An external fault is triggered with a 0 signal. If this fault is output at the Control Unit, then it is transferred to all existing drive objects.		

r2109[0...63]	Fault time removed in milliseconds / t_flt resolved ms		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 8050, 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the system runtime in milliseconds when the fault was removed.		
Dependency:	Refer to: r0945, r0947, r0948, r0949, r2114, r2130, r2133, r2136, r3115, r3120, r3122		
Notice:	The time comprises r2136 (days) and r2109 (milliseconds).		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). The structure of the fault buffer and the assignment of the indices is shown in r0945.		

r2110[0...63]	Alarm number / Alarm number		
All objects	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	This parameter is identical to r2122.		

p2111	Alarm counter / Alarm counter		
All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Number of alarms that have occurred after the last reset.		
Dependency:	When p2111 is set to 0, the following is initiated: - all of the alarms of the alarm buffer that have gone [0...7] are transferred into the alarm history [8...63]. - the alarm buffer [0...7] is deleted.		
	Refer to: r2110, r2122, r2123, r2124, r2125		
Note:	The parameter is reset to 0 at POWER ON.		

p2112	BI: External alarm 1 / External alarm 1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for external alarm 1.		
Dependency:	Refer to: A07850		
Note:	An external alarm is triggered with a 0 signal.		

2 Parameters

2.2 List of parameters

p2112[0...n]	BI: External alarm 1 / External alarm 1		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external alarm 1.		
Dependency:	Refer to: A07850		
Note:	An external alarm is triggered with a 0 signal.		
r2114[0...1]	System runtime total / Sys runtime tot		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the total system runtime for the drive unit. The time comprises r2114[0] (milliseconds) and r2114[1] (days). After r2114[0] has reached a value of 86.400.000 ms (24 hours) this value is reset and r2114[1] is incremented.		
Index:	[0] = Milliseconds [1] = Days		
Dependency:	Refer to: r0948, r2109, r2123, r2125, r2130, r2136, r2145, r2146		
Note:	The time in r2114 is used to display the times for faults and alarms. When the electronic power supply is switched out, the counter values are saved. After the drive unit is switched on, the counter continues to run with the last value that was saved.		
p2116	BI: External alarm 2 / External alarm 2		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external alarm 2.		
Dependency:	Refer to: A07851		
Note:	An external alarm is triggered with a 0 signal.		

p2116[0...n]	BI: External alarm 2 / External alarm 2		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external alarm 2.		
Dependency:	Refer to: A07851		
Note:	An external alarm is triggered with a 0 signal.		
p2117	BI: External alarm 3 / External alarm 3		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external alarm 3.		
Dependency:	Refer to: A07852		
Note:	An external alarm is triggered with a 0 signal.		
p2117[0...n]	BI: External alarm 3 / External alarm 3		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external alarm 3.		
Dependency:	Refer to: A07852		
Note:	An external alarm is triggered with a 0 signal.		
p2118[0...19]	Change message type message number / Chng type msg_no		
All objects	Can be changed: U, T Data type: Unsigned16 P-Group: Messages Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: 8050, 8075 Unit selection: - Expert list: 1 Factory setting 0
Description:	Selects faults or alarms for which the message type should be changed.		
Dependency:	Selects the fault or alarm selection and sets the required type of message realized under the same index. Refer to: p2119		
Note:	Re-parameterization is also possible if a message is present. The change only becomes effective after the message has gone.		

p2119[0...19]	Change message type type / Change type type		
All objects	Can be changed: U, T Data type: Integer16 P-Group: Messages Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 3 Func. diagram: 8050, 8075 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the message type for the selected fault or alarm.		
Value:	1: Fault (F) 2: Alarm (A) 3: No message (N)		
Dependency:	Selects the fault or alarm selection and sets the required type of message realized under the same index. Refer to: p2118		
Note:	Re-parameterization is also possible if a message is present. The change only becomes effective after the message has gone. The message type can only be changed for messages with the appropriate identification (exception, value = 0). Example: F12345(A) --> Fault F12345 can be changed to alarm A12345. In this case, the message number that may be possibly entered in p2100[0...19] and p2126[0...19] is automatically removed.		
r2120	CO: Sum of fault and alarm buffer changes / Sum buffer changed		
All objects	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: 8065 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the sum of all of the fault and alarm buffer changes in the drive unit.		
Dependency:	Refer to: r0944, r2121		
r2121	CO: Counter alarm buffer changes / Alrm buff changed		
All objects	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8065 Unit selection: - Expert list: 1 Factory setting -
Description:	This counter is incremented every time the alarm buffer changes.		
Dependency:	Refer to: r2110, r2122, r2123, r2124, r2125		
r2122[0...63]	Alarm code / Alarm code		
All objects	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 8050, 8065 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of alarms that have occurred.		
Dependency:	Refer to: r2110, r2123, r2124, r2125, r2134, r2145, r2146, r3121, r3123		
Notice:	The properties of the alarm buffer should be taken from the corresponding product documentation.		

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

Alarm buffer structure (general principle):

r2122[0], r2124[0], r2123[0], r2125[0] --> alarm 1 (the oldest)

...

r2122[7], r2124[7], r2123[7], r2125[7] --> Alarm 8 (the latest)

When the alarm buffer is full, the alarms that have gone are entered into the alarm history:

r2122[8], r2124[8], r2123[8], r2125[8] --> Alarm 1 (the latest)

...

r2122[63], r2124[63], r2123[63], r2125[63] --> alarm 56 (the oldest)

r2123[0...63] Alarm time received in milliseconds / t_alarm rcv ms

All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 8050, 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the alarm occurred.

Dependency: Refer to: r2110, r2114, r2122, r2124, r2125, r2134, r2145, r2146, r3121, r3123

Notice: The time comprises r2145 (days) and r2123 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r2124[0...63] Alarm value / Alarm value

All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: 8050, 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays additional information about the active alarm (as integer number).

Dependency: Refer to: r2110, r2122, r2123, r2125, r2134, r2145, r2146, r3121, r3123

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r2125[0...63] Alarm time removed in milliseconds / t_alarm res ms

All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 8050, 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the alarm was cleared.

Dependency: Refer to: r2110, r2114, r2122, r2123, r2124, r2134, r2145, r2146, r3121, r3123

Notice: The time comprises r2146 (days) and r2125 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the alarm buffer and the assignment of the indices is shown in r2122.

p2126[0...19]	Change acknowledge mode fault number / Chng ackn F_no		
All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8075
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Selects the faults for which the acknowledge mode is to be changed		
Dependency:	Selects the faults and sets the required acknowledge mode realized under the same index Refer to: p2127		
Note:	Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.		

p2127[0...19]	Change acknowledge mode mode / Chng ackn mode		
All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 8050, 8075
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	3	1
Description:	Sets the acknowledge mode for selected fault.		
Value:	1: Acknowledgment only using POWER ON 2: Ack IMMEDIATELY after the fault cause has been removed 3: Acknowledgment only for PULSE INHIBIT		
Dependency:	Selects the faults and sets the required acknowledge mode realized under the same index Refer to: p2126		
Notice:	It is not possible to re-parameterize the acknowledge mode for a fault in the following cases: - fault number does not exist (exception value = 0). - Message type is not "fault" (F). - Acknowledge mode is not permissible for the set fault number.		
Note:	Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved. The acknowledge mode can only be changed for faults with the appropriate identification. Example: F12345 and acknowledge mode = IMMEDIATELY (POWER ON) --> The acknowledge mode can be changed from IMMEDIATELY to POWER ON.		

p2128[0...15]	Faults/alarms trigger selection / F/A trigger sel		
All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8070
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Sets the faults/alarms for which a trigger signal should be generated in r2129.0...15.		
Dependency:	If the fault/alarm set in p2128[0...15] occurs, then the particular binector output r2129.0...15 is set. Refer to: r2129		

r2129.0...15		CO/BO: Faults/alarms trigger word / F/A trigger word		
All objects	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8070 Unit selection: - Expert list: 1 Factory setting -	
Description:	Display and BICO output for the trigger signals of the faults/alarms set in p2128[0...15].			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Trigger signal p2128[0]	ON	OFF
	01	Trigger signal p2128[1]	ON	OFF
	02	Trigger signal p2128[2]	ON	OFF
	03	Trigger signal p2128[3]	ON	OFF
	04	Trigger signal p2128[4]	ON	OFF
	05	Trigger signal p2128[5]	ON	OFF
	06	Trigger signal p2128[6]	ON	OFF
	07	Trigger signal p2128[7]	ON	OFF
	08	Trigger signal p2128[8]	ON	OFF
	09	Trigger signal p2128[9]	ON	OFF
	10	Trigger signal p2128[10]	ON	OFF
	11	Trigger signal p2128[11]	ON	OFF
	12	Trigger signal p2128[12]	ON	OFF
	13	Trigger signal p2128[13]	ON	OFF
	14	Trigger signal p2128[14]	ON	OFF
	15	Trigger signal p2128[15]	ON	OFF
Dependency:	If the fault/alarm set in p2128[0...15] occurs, then the particular binector output r2129.0...15 is set. Refer to: p2128			
Note:	CO: r2129 = 0 --> None of the selected messages has occurred. CO: r2129 > 0 --> At least one of the selected messages has occurred.			
r2130[0...63]		Fault time received in days / t_fault recv days		
All objects	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8060 Unit selection: - Expert list: 1 Factory setting -	
Description:	Displays the system runtime in days when the fault occurred.			
Dependency:	Refer to: r0945, r0947, r0948, r0949, r2109, r2114, r2133, r2136, r3115, r3120, r3122			
Notice:	The time comprises r2130 (days) and r0948 (milliseconds).			
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139).			
r2131		CO: Actual fault code / Act fault code		
All objects	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8060 Unit selection: - Expert list: 1 Factory setting -	
Description:	Displays the code of the oldest active fault.			
Dependency:	Refer to: r3131, r3132			
Note:	0: No fault present.			

r2132						CO: Actual alarm code / Actual alarm code					
All objects		Can be changed: -		Calculated: -		Access level: 3					
		Data type: Unsigned16		Dyn. index: -		Func. diagram: 8065					
		P-Group: Messages		Unit group: -		Unit selection: -					
		Not for motor type: -		Scaling: -		Expert list: 1					
		Min		Max		Factory setting					
		-		-		-					
Description:		Displays the code of the last alarm that occurred.									
Note:		0: No alarm present.									
r2133[0...63]						Fault value for float values / Fault val float					
All objects		Can be changed: -		Calculated: -		Access level: 3					
		Data type: FloatingPoint32		Dyn. index: -		Func. diagram: 8060					
		P-Group: Messages		Unit group: -		Unit selection: -					
		Not for motor type: -		Scaling: -		Expert list: 1					
		Min		Max		Factory setting					
		-		-		-					
Description:		Displays additional information about the fault that occurred for float values.									
Dependency:		Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2136, r3115									
Note:		The buffer parameters are cyclically updated in the background (refer to status signal in r2139).									
r2134[0...63]						Alarm value for float values / Alarm value float					
All objects		Can be changed: -		Calculated: -		Access level: 3					
		Data type: FloatingPoint32		Dyn. index: -		Func. diagram: 8065					
		P-Group: Messages		Unit group: -		Unit selection: -					
		Not for motor type: -		Scaling: -		Expert list: 1					
		Min		Max		Factory setting					
		-		-		-					
Description:		Displays additional information about the active alarm for float values.									
Dependency:		Refer to: r2110, r2122, r2123, r2124, r2125, r2145, r2146, r3121, r3123									
Note:		The buffer parameters are cyclically updated in the background (refer to status signal in r2139).									
r2135.0...15						CO/BO: Status word faults/alarms 2 / ZSW fault/alarm 2					
All objects		Can be changed: -		Calculated: -		Access level: 2					
		Data type: Unsigned16		Dyn. index: -		Func. diagram: 2548					
		P-Group: Displays, signals		Unit group: -		Unit selection: -					
		Not for motor type: -		Scaling: -		Expert list: 1					
		Min		Max		Factory setting					
		-		-		-					
Description:		Display and BICO output for the second status word of faults and alarms.									
Bit field:		Bit		Signal name		1 signal		0 signal		FP	
		00		Fault encoder 1		Yes		No		-	
		01		Fault encoder 2		Yes		No		-	
		02		Fault encoder 3		Yes		No		-	
		12		Fault motor overtemperature		Yes		No		8016	
		13		Fault power unit thermal overload		Yes		No		8021	
		14		Alarm motor overtemperature		Yes		No		8016	
		15		Alarm power unit thermal overload		Yes		No		8021	

r2136[0...63]	Fault time removed in days / t_flr resolv days		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the system runtime in days when the fault was removed.		
Dependency:	Refer to: r0945, r0947, r0948, r0949, r2109, r2114, r2130, r2133, r3115, r3120, r3122		
Notice:	The time comprises r2136 (days) and r2109 (milliseconds).		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139).		

r2138.7...15	CO/BO: Control word faults/alarms / STW fault/alarm				
All objects	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 2546		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Display and BICO output for the control word of faults and alarms.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	07	Acknowledge fault	Yes	No	8060
	10	External alarm 1 (A07850) effective	Yes	No	8065
	11	External alarm 2 (A07851) effective	Yes	No	8065
	12	External alarm 3 (A07852) effective	Yes	No	8065
	13	External fault 1 (F07860) effective	Yes	No	8060
	14	External fault 2 (F07861) effective	Yes	No	8060
	15	External fault 3 (F07862) effective	Yes	No	8060
Dependency:	Refer to: p2103, p2104, p2105, p2106, p2107, p2108, p2112, p2116, p2117, p3110, p3111, p3112				

r2139.0...15	CO/BO: Status word faults/alarms 1 / ZSW fault/alarm 1				
All objects	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 2548		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Display and BICO output for status word 1 of faults and alarms.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Being acknowledged	Yes	No	-
	01	Acknowledgment required	Yes	No	-
	03	Fault present	Yes	No	8060
	05	Safety message present	Yes	No	-
	06	Internal message 1 present	Yes	No	-
	07	Alarm present	Yes	No	8065
	08	Internal message 2 present	Yes	No	-
	11	Alarm class bit 0	High	Low	-
	12	Alarm class bit 1	High	Low	-
	13	Maintenance required	Yes	No	-
	14	Maintenance urgently required	Yes	No	-
	15	Fault gone/can be acknowledged	Yes	No	-
Note:	For bit 03, 05, 07: These bits are set if at least one fault/alarm occurs. Data is entered into the fault/alarm buffer with delay. This is the reason that the fault/alarm buffer should only be read if, after "fault present" or "alarm present" has occurred, a change in the buffer was also detected (r0944, r9744, r2121).				

2 Parameters

2.2 List of parameters

For bit 06, 08:

These status bits are used for internal diagnostic purposes only.

For bit 12, 11:

These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only on certain automation systems with integrated SINAMICS functionality.

p2140[0...n]	Hysteresis speed 2 / n_hysteresis 2		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	300.00 [rpm]	90.00 [rpm]
Description:	Sets the hysteresis speed (bandwidth) for the following signals: " n_act <= speed threshold value 2" (BO: r2197.1) " n_act > speed threshold value 2" (BO: r2197.2)		
Dependency:	Refer to: p2155, r2197		
p2140[0...n]	Hysteresis velocity 2 / v_hysteresis 2		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	10.00 [m/min]	0.90 [m/min]
Description:	Sets the hysteresis velocity (bandwidth) for the following signals: " n_act <= velocity threshold value 2" (BO: r2197.1) " n_act > velocity threshold value 2" (BO: r2197.2)		
Dependency:	Refer to: p2155, r2197		
p2141[0...n]	Speed threshold 1 / n_thresh val 1		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	5.00 [rpm]
Description:	Sets the speed threshold value for the signal "f or n comparison value reached or exceeded" (BO: r2199.1).		
Dependency:	Refer to: p2142, r2199		
p2141[0...n]	Velocity threshold value 1 / v_thresh val 1		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	1000.00 [m/min]	0.05 [m/min]
Description:	Sets the velocity threshold value for the signal "f or n comparison value reached or exceeded" (BO: r2199.1).		
Dependency:	Refer to: p2142, r2199		

p2142[0...n]	Hysteresis speed 1 / n_hysteresis 1		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 300.00 [rpm]	Factory setting 2.00 [rpm]
Description:	Sets the hysteresis speed (bandwidth) for the signal "f or n / v comparison value reached or exceeded" (BO: r2199.1).		
Dependency:	Refer to: p2141, r2199		
p2142[0...n]	Hysteresis speed 1 / n_hysteresis 1		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [m/min]	Max 10.00 [m/min]	Factory setting 0.02 [m/min]
Description:	Sets the hysteresis speed (bandwidth) for the signal "f or n / v comparison value reached or exceeded" (BO: r2199.1).		
Dependency:	Refer to: p2141, r2199		
p2144[0...n]	BI: Motor stall monitoring enable (negated) / Mot stall enab neg		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8012
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting 0
Description:	Sets the signal source for the negated enable (0 = enable) of the motor stall monitoring.		
Dependency:	Refer to: p2163, p2164, p2166, r2197, r2198 Refer to: F07900		
Note:	When interconnecting the enable signal with r2197.7 then the stall signal is suppressed if there is no speed setpoint - actual value deviation.		
r2145[0...63]	Alarm time received in days / t_alarm rcv days		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting -
Description:	Displays the system runtime in days when the alarm occurred.		
Dependency:	Refer to: r2110, r2114, r2122, r2123, r2124, r2125, r2134, r2146, r3121, r3123		
Notice:	The time comprises r2145 (days) and r2123 (milliseconds).		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139).		

r2146[0...63]	Alarm time removed in days / t_alarm res days		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the system runtime in days when the alarm was cleared.		
Dependency:	Refer to: r2110, r2114, r2122, r2123, r2124, r2125, r2134, r2145, r3121, r3123		
Notice:	The time comprises r2146 (days) and r2125 (milliseconds).		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139).		
p2147	Delete fault buffer of all drive objects / Del fault buffer		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: -	Func. diagram: 8060
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to delete the fault buffer of all existing drive objects.		
Value:	0: Inactive 1: Start to delete the fault buffer of all drive objects		
Dependency:	Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136		
Note:	p2147 is automatically set to 0 after execution.		
p2148[0...n]	BI: RFG active / RFG active		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8011
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the signal "ramp-function generator active" for the following signals/messages: "Speed setpoint - actual value deviation within tolerance t_on" (BO: r2199.4) "Ramp-up/ramp-down completed" (BO: r2199.5)		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The binector input is automatically pre-assigned to r1199.2. The following applies for SERVO: The pre-assignment using the automatic calculation of the motor/control parameters in the drive (p0340 = 1, 3, 5) is only realized if, at the instant of the calculation, the "setpoint channel" function module is active (r0108.8 = 1). If the calculation in p0340 is not selected when downloading parameters, then the parameter is not pre-assigned.		

p2149[0...n]		Monitoring configuration / Monit config			
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: Messages	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 0000 0000 bin		
Description:	Sets the configuration for messages and monitoring functions.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Enable alarm A07903	Yes	No	8011
	01	Load monitoring only in the 1st quadrant	Yes	No	8013
	03	Reserved			-
	15	Automatic parameterization carried out (p0340 = 1, p3900 > 0)	Yes	No	-
Dependency:	Refer to: r2197				
	Refer to: A07903				
Note:	For bit 00: Alarm A07903 is output when the bit is set with r2197.7 = 0 (n_set <> n_act).				
	For bit 01: As a result of the positive characteristic parameters (p2182 ... p2190), when the bit is set, the load monitoring is only executed in the 1st quadrants.				
	For bit 03: When the bit is set, r2197.1 and r2197.2 are determined using separate hysteresis functions.				
	For bit 15: The bit indicates whether the automatic parameterization (p0340 = 1, p3900 > 0) for the parameters of the extended monitoring functions was carried out.				
	If the bit is not set (e.g. when the configuration is activated (p0108.15)), the parameterization is automatically carried out during booting even if r3925.0 is already 1.				

p2149[0...n]		Monitoring configuration / Monit config			
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: Messages	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 0000 0001 bin		
Description:	Sets the configuration for messages and monitoring functions.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Enable alarm A07903	Yes	No	8011
	01	Load monitoring only in the 1st quadrant	Yes	No	8013
	03	Reserved			-
	06	Enable underspeed monitoring	Yes	No	8010
	15	Automatic parameterization carried out (p0340 = 1, p3900 > 0)	Yes	No	-
Dependency:	Refer to: r2197				
	Refer to: A07903				
Note:	For bit 00: Alarm A07903 is output when the bit is set with r2197.7 = 0 (n_set <> n_act).				
	For bit 01: As a result of the positive characteristic parameters (p2182 ... p2190), when the bit is set, the load monitoring is only executed in the 1st quadrants.				
	For bit 03: When the bit is set, r2197.1 and r2197.2 are determined using separate hysteresis functions.				

2 Parameters

2.2 List of parameters

For bit 06:

When the bit is set, with r2197.1 = 1 (n_act < p2155 speed threshold value 2) alarm A08721 is output, and with r2199.0 = 1 (n_act < p2161 speed threshold value 3), fault F07822 is output.

For separately excited synchronous motors (without encoder) in torque control (p1501 set), the underspeed speed monitoring is automatically activated if conditions (p0300 = 5, p1300 = 20) for the automatic pre-assignment of the threshold values during commissioning (p0340 = 1) are fulfilled.

The alarm threshold p2155 is preassigned with $1.5 * p1755$ - and the fault threshold p2161, with p1755.

For bit 15:

The bit indicates whether the automatic parameterization (p0340 = 1, p3900 > 0) for the parameters of the extended monitoring functions was carried out.

If the bit is not set (e.g. when the configuration is activated (p0108.15)), the parameterization is automatically carried out during booting even if r3925.0 is already 1.

p2150[0...n]	Hysteresis speed 3 / n_hysteresis 3		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3

	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 210000.00 [rpm]	Factory setting 5.00 [rpm]
Description:	Sets the speed threshold value for the signal " n_act < speed threshold value 3" (BO: r2199.0).		
Dependency:	Refer to: p2142, r2199		
p2161[0...n]	Velocity threshold value 3 / v_thresh val 3		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010, 8011
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [m/min]	Max 1000.00 [m/min]	Factory setting 0.05 [m/min]
Description:	Sets the velocity threshold value for the signal " v_act < velocity threshold value 3" (BO: r2199.0).		
Dependency:	Refer to: p2142, r2199		
p2161[0...n]	Speed threshold 3 / n_thresh val 3		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010, 8011
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 210000.00 [rpm]	Factory setting 5.00 [rpm]
Description:	Sets the speed threshold value for the signal " n_act < speed threshold value 3" (BO: r2199.0).		
Dependency:	Refer to: p2142, r2199		
Caution:	The threshold monitoring function is deactivated with 2161 = 0.0.		
			
Note:	The parameter is used as fault threshold for underspeed monitoring Underspeed monitoring for a separately excited synchronous motor in closed-loop torque control without an encoder (p0300 = 5, p1300 = 20, p1501 = 1 signal), is automatically activated internally, and can be manually activated with p2149.6 = 1. For separately excited synchronous motors, when exiting commissioning (p0340 = 5), this parameter is automatically assigned p1755.		
p2162[0...n]	Hysteresis speed n_act > n_max / Hyst n_act > n_max		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 60000.00 [rpm]	Factory setting 0.00 [rpm]
Description:	Sets the hysteresis speed (bandwidth) for the signal "n_act > n_max" (BO: r2197.6).		
Dependency:	Refer to: r1084, r1087, r2197		

Notice: For p0322 = 0, the following applies: $p2162 \leq 0.1 * p0311$
 For p0322 > 0, the following applies: $p2162 \leq 1.02 * p0322 - p1082$
 If one of the conditions is violated, p2162 is appropriately and automatically reduced when exiting the commissioning mode.

Note: For a negative speed limit (r1087) the hysteresis is effective below the limit value and for a positive speed limit (r1084) above the limit value.
 If significant overshoot occurs in the maximum speed range (e.g. due to load shedding), you are advised to increase the dynamic response of the speed controller (if possible). If this is insufficient, the hysteresis p2162 can only be increased by more than 10% of the rated speed when the maximum speed (p0322) of the motor is sufficiently greater than the speed limit p1082.

p2162[0...n]	Hysteresis velocity $v_{act} > v_{max}$ / Hyst $v_{act} > v_{max}$		
SERVO (Lin), HLA, SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	1000.00 [m/min]	6.00 [m/min]
Description:	Sets the hysteresis velocity (bandwidth) for the signal " $v_{act} > v_{max}$ " (BO: r2197.6).		
Dependency:	Refer to: r1084, r1087, r2197		
Notice:	For p0322 = 0, the following applies: $p2162 \leq 0.1 * p0311$ For p0322 > 0, the following applies: $p2162 \leq 1.02 * p0322 - p1082$ If one of the conditions is violated, p2162 is appropriately and automatically reduced when exiting the commissioning mode.		
Note:	For a negative velocity limit (r1087) the hysteresis is effective below the limit value and for a positive velocity limit (r1084) above the limit value.		

p2163[0...n]	Velocity threshold value 4 / v_{thresh} val 4		
HLA	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	1000.00 [m/min]	0.90 [m/min]
Description:	Sets the velocity threshold value for the "velocity setpoint - actual value deviation in tolerance t_{off} " message (BO: r2197.7).		
Dependency:	Refer to: p2164, p2166, r2197		

p2163[0...n]	Speed threshold 4 / n_{thresh} val 4		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8011
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	90.00 [rpm]
Description:	Sets the speed threshold value for the "speed setpoint - actual value deviation in tolerance t_{off} " signal/message (BO: r2197.7).		
Dependency:	Refer to: p2164, p2166, r2197		

2 Parameters

2.2 List of parameters

p2163[0...n]	Velocity threshold value 4 / v_thresh val 4		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8011
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505

	Min	Max	Factory setting
	0.0 [ms]	10000.0 [ms]	200.0 [ms]
Description:	Sets the switch-off delay time for the "velocity setpoint - actual value deviation in tolerance t_{off} " signal/message (BO: r2197.7).		
Dependency:	Refer to: p2163, p2164, r2197		
p2167[0...n]	Switch-on delay $n_{act} = n_{set} / t_{on} n_{act} = n_{set}$		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8011
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [ms]	10000.0 [ms]	200.0 [ms]
Description:	Sets the switch-on delay for the "speed setpoint - actual value deviation in tolerance t_{on} " signal/message (BO: r2199.4).		
p2167[0...n]	On delay $v_{act} = v_{set} / t_{on} n_{act} = n_{set}$		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8011
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [ms]	10000.0 [ms]	200.0 [ms]
Description:	Sets the switch-on delay for the "speed setpoint - actual value deviation in tolerance t_{on} " signal/message (BO: r2199.4).		

r2169	CO: Actual velocity smoothed signals / v_act smth message		
HLA	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Display and connector output of the smoothed velocity actual value for messages.		
Dependency:	Refer to: p2153		

r2169	CO: Actual speed smoothed signals / n_act smth message		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8010
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output of the smoothed speed actual value for messages.		
Dependency:	Refer to: p2153		

r2169	CO: Actual velocity smoothed signals / v_act smth message		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8010
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Display and connector output of the smoothed velocity actual value for messages.		
Dependency:	Refer to: p2153		

p2174[0...n]	Torque threshold value 1 / M_thresh val 1		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: 7_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Nm]	20000000.00 [Nm]	5.13 [Nm]
Description:	Sets the torque threshold value for the signal "Torque setpoint < torque threshold value 1" (BO: r2198.10).		
Dependency:	Refer to: p2195, r2198		

p2174[0...n]	Force threshold value 1 / F_thresh val 1		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: 8_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [N]	20000000.00 [N]	1000.00 [N]
Description:	Sets the force threshold value for the signal "force setpoint < force threshold value 1" (BO: r2198.10).		
Dependency:	Refer to: p2195, r2198		

p2174[0...n]	Torque threshold value 1 / M_thresh val 1		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: 7_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Nm]	20000000.00 [Nm]	5.13 [Nm]
Description:	Sets the torque threshold value for the messages: "Torque setpoint < torque threshold value 1 and n_set reached" (BO: r2198.9) "Torque setpoint < torque threshold value 1" (BO: r2198.10) "Torque setpoint > torque threshold value 1" (BO: r2198.13)		
Dependency:	Refer to: p2195, r2198		

p2175[0...n]	Motor blocked velocity threshold / Mot lock v_thresh		
HLA	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	1000.00 [m/min]	1.20 [m/min]
Description:	Sets the velocity threshold for the message "Motor locked".		
Dependency:	Refer to: p2177 Refer to: F07900		

p2175[0...n]	Motor blocked speed threshold / Mot lock n_thresh		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	120.00 [rpm]
Description:	Sets the speed threshold for the message "Motor blocked" (BO: r2198.6).		
Dependency:	Refer to: p0500, p2177, r2198 Refer to: F07900		

p2175[0...n]	Motor blocked velocity threshold / Mot lock v_thresh		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	1000.00 [m/min]	1.20 [m/min]
Description:	Sets the velocity threshold for the message "Motor blocked" (BO: r2198.6).		
Dependency:	Refer to: p0500, p2177, r2198 Refer to: F07900		

2 Parameters

2.2 List of parameters

p2175[0...n]	Motor blocked speed threshold / Mot lock n_thresh		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 210000.00 [rpm]	Factory setting 120.00 [rpm]
Description:	Sets the speed threshold for the message "Motor blocked" (BO: r2198.6).		
Dependency:	Refer to: p0500, p2177, r2198 Refer to: F07900		
Note:	The following applies for encoderless vector control for induction motors: At low speeds in open-loop speed controlled operation (see p1755, p1756), a blocked motor cannot be detected. The following applies for encoderless vector control for permanent magnet synchronous motors: At low speeds in open-loop speed controlled operation (see p1755, p1756), a blocked motor can only be detected if p2175 = p1755, and p1750.6 is set to 1.		
p2177[0...n]	Motor blocked delay time / Mot lock t_del		
HLA	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.000 [s]	Max 65.000 [s]	Factory setting 1.000 [s]
Description:	Sets the delay time for the message "Motor locked".		
Dependency:	Refer to: p0500, p2175, r2198 Refer to: F07900		
p2177[0...n]	Motor blocked delay time / Mot lock t_del		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.000 [s]	Max 65.000 [s]	Factory setting 1.000 [s]
Description:	Sets the delay time for the message "Motor blocked" (BO: r2198.6).		
Dependency:	Refer to: p0500, p2175, r2198 Refer to: F07900		
p2177[0...n]	Motor blocked delay time / Mot lock t_del		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.000 [s]	Max 65.000 [s]	Factory setting 1.000 [s]
Description:	Sets the delay time for the message "Motor blocked" (BO: r2198.6).		
Dependency:	Refer to: p0500, p2175, r2198 Refer to: F07900		

Note: The following applies for sensorless vector control:
 At low speeds a locked motor can only be detected if no change is made to open-loop speed controlled operation. If this is the case, the value in p2177 must be reduced accordingly (p2177 < p1758) before time p2177 has elapsed in order to detect the locked state reliably.
 As countermeasure, it is generally also possible to set p1750.6. This is only not permitted if the drive is slowly reversed by the load at the torque limit (speed below p1755 for longer than p1758).

p2178[0...n]	Motor stalled delay time / Mot stall t_{del}		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	10.000 [s]	0.010 [s]
Description:	Sets the delay time for the message "Motor stalled" (BO: r2198.7).		
Dependency:	Refer to: r2198		

p2181[0...n]	Load monitoring response / Load monit resp		
SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	0
Description:	Sets the response when evaluating the load monitoring.		
Value:	0: Load monitoring disabled 1: A07920 for torque/speed too low 2: A07921 for torque/speed too high 3: A07922 for torque/speed out of tolerance 4: F07923 for torque/speed too low 5: F07924 for torque/speed too high 6: F07925 for torque/speed out of tolerance		
Dependency:	Refer to: p2182, p2183, p2184, p2185, p2186, p2187, p2188, p2189, p2190, p2192, r2198 Refer to: A07920, A07921, A07922, F07923, F07924, F07925		
Note:	The response to the faults F07923 ... F07925 can be set. This parameter setting has no effect on the generation of fault F07936.		

p2182[0...n]	Load monitoring velocity threshold 1 / v_{thresh 1}		
SERVO (Ext msg, Lin), SERVO_AC (Ext msg, Lin), SERVO_I_AC (Ext msg, Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	1000.00 [m/min]	0.05 [m/min]
Description:	Sets the speed/torque envelope curve for load monitoring. The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds: p2182 (n _{threshold 1}) --> p2185 (M _{threshold 1} , upper), p2186 (M _{threshold 1} , lower) p2183 (n _{threshold 2}) --> p2187 (M _{threshold 2} , upper), p2188 (M _{threshold 2} , lower) p2184 (n _{threshold 3}) --> p2189 (M _{threshold 3} , upper), p2190 (M _{threshold 3} , lower)		
Dependency:	The following applies: p2182 < p2183 < p2184 Refer to: p2183, p2184, p2185, p2186 Refer to: A07926		
Note:	In order that the load monitoring can reliably respond, the speed threshold p2182 should always be set lower than the minimum motor speed to be monitored.		

2 Parameters

2.2 List of parameters

p2182[0...n]	Load monitoring speed threshold value 1 / n_thresh 1		
SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 150.00 [rpm]
Description:	Sets the speed/torque envelope curve for load monitoring. The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds: p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower) p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower) p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)		
Dependency:	The following applies: p2182 < p2183 < p2184 Refer to: p2183, p2184, p2185, p2186 Refer to: A07926		
Note:	In order that the load monitoring can reliably respond, the speed threshold p2182 should always be set lower than the minimum motor speed to be monitored.		

p2183[0...n]	Load monitoring velocity threshold 2 / v_thresh 2		
SERVO (Ext msg, Lin), SERVO_AC (Ext msg, Lin), SERVO_I_AC (Ext msg, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: - Max 1000.00 [m/min]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 0.05 [m/min]
Description:	Sets the speed/torque envelope curve for load monitoring. The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds: p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower) p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower) p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)		
Dependency:	The following applies: p2182 < p2183 < p2184 Refer to: p2182, p2184, p2187, p2188 Refer to: A07926		

p2183[0...n]	Load monitoring speed threshold value 2 / n_thresh 2		
SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 900.00 [rpm]
Description:	Sets the speed/torque envelope curve for load monitoring. The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds: p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower) p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower) p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)		
Dependency:	The following applies: p2182 < p2183 < p2184 Refer to: p2182, p2184, p2187, p2188 Refer to: A07926		

p2184[0...n] Load monitoring velocity threshold 3 / v_thresh 3			
SERVO (Ext msg, Lin), SERVO_AC (Ext msg, Lin), SERVO_I_AC (Ext msg, Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: 4_1	Unit selection: p0505

	0.00 [N]	100000.00 [N]	100000.00 [N]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2185 > p2186 Refer to: p2182, p2186 Refer to: A07926		
Note:	The upper envelope curve is defined by p2185, p2187 and p2189.		

2 Parameters

2.2 List of parameters

p2185[0...n]	Load monitoring torque threshold 1 upper / M_thresh 1 upper		
SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [Nm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 7_1 Scaling: - Max 20000000.00 [Nm]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 10000000.00 [Nm]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2185 > p2186 Refer to: p2182, p2186 Refer to: A07926		
Note:	The upper envelope curve is defined by p2185, p2187 and p2189.		
<hr/>			
p2186[0...n]	Load monitoring force threshold 1 lower / F_thresh 1 lower		
SERVO (Ext msg, Lin), SERVO_AC (Ext msg, Lin), SERVO_I_AC (Ext msg, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [N]	Calculated: - Dyn. index: DDS, p0180 Unit group: 8_1 Scaling: - Max 100000.00 [N]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 0.00 [N]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2186 < p2185 Refer to: p2182, p2185 Refer to: A07926		
Note:	The lower envelope curve is defined by p2186, p2188 and p2190.		
<hr/>			
p2186[0...n]	Load monitoring torque threshold 1 lower / M_thresh 1 lower		
SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [Nm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 7_1 Scaling: - Max 20000000.00 [Nm]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 0.00 [Nm]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2186 < p2185 Refer to: p2182, p2185 Refer to: A07926		
Note:	The lower envelope curve is defined by p2186, p2188 and p2190.		
<hr/>			
p2187[0...n]	Load monitoring force threshold 2 upper / F_thresh 2 upper		
SERVO (Ext msg, Lin), SERVO_AC (Ext msg, Lin), SERVO_I_AC (Ext msg, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [N]	Calculated: - Dyn. index: DDS, p0180 Unit group: 8_1 Scaling: - Max 100000.00 [N]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 100000.00 [N]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2187 > p2188 Refer to: p2183, p2188 Refer to: A07926		
Note:	The upper envelope curve is defined by p2185, p2187 and p2189.		

p2187[0...n]	Load monitoring torque threshold 2 upper / M_thresh 2 upper		
SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [Nm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 7_1 Scaling: - Max 20000000.00 [Nm]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 10000000.00 [Nm]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2187 > p2188 Refer to: p2183, p2188 Refer to: A07926		
Note:	The upper envelope curve is defined by p2185, p2187 and p2189.		
p2188[0...n]	Load monitoring force threshold 2 lower / F_thresh 2 lower		
SERVO (Ext msg, Lin), SERVO_AC (Ext msg, Lin), SERVO_I_AC (Ext msg, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [N]	Calculated: - Dyn. index: DDS, p0180 Unit group: 8_1 Scaling: - Max 100000.00 [N]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 0.00 [N]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2188 < p2187 Refer to: p2183, p2187 Refer to: A07926		
Note:	The lower envelope curve is defined by p2186, p2188 and p2190.		
p2188[0...n]	Load monitoring torque threshold 2 lower / M_thresh 2 lower		
SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [Nm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 7_1 Scaling: - Max 20000000.00 [Nm]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 0.00 [Nm]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2188 < p2187 Refer to: p2183, p2187 Refer to: A07926		
Note:	The lower envelope curve is defined by p2186, p2188 and p2190.		
p2189[0...n]	Load monitoring force threshold 3 upper / F_thresh 3 upper		
SERVO (Ext msg, Lin), SERVO_AC (Ext msg, Lin), SERVO_I_AC (Ext msg, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [N]	Calculated: - Dyn. index: DDS, p0180 Unit group: 8_1 Scaling: - Max 100000.00 [N]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 100000.00 [N]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2189 > p2190 Refer to: p2184, p2190 Refer to: A07926		
Note:	The upper envelope curve is defined by p2185, p2187 and p2189.		

2 Parameters

2.2 List of parameters

p2189[0...n]	Load monitoring torque threshold 3 upper / M_thresh 3 upper		
SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [Nm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 7_1 Scaling: - Max 20000000.00 [Nm]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 10000000.00 [Nm]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2189 > p2190 Refer to: p2184, p2190 Refer to: A07926		
Note:	The upper envelope curve is defined by p2185, p2187 and p2189.		
<hr/>			
p2190[0...n]	Load monitoring force threshold 3 lower / F_thresh 3 lower		
SERVO (Ext msg, Lin), SERVO_AC (Ext msg, Lin), SERVO_I_AC (Ext msg, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [N]	Calculated: - Dyn. index: DDS, p0180 Unit group: 8_1 Scaling: - Max 100000.00 [N]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 0.00 [N]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2190 < p2189 Refer to: p2184, p2189 Refer to: A07926		
Note:	The lower envelope curve is defined by p2186, p2188 and p2190.		
<hr/>			
p2190[0...n]	Load monitoring torque threshold 3 lower / M_thresh 3 lower		
SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [Nm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 7_1 Scaling: - Max 20000000.00 [Nm]	Access level: 3 Func. diagram: 8013 Unit selection: p0505 Expert list: 1 Factory setting 0.00 [Nm]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2190 < p2189 Refer to: p2184, p2189 Refer to: A07926		
Note:	The lower envelope curve is defined by p2186, p2188 and p2190.		
<hr/>			
p2192[0...n]	Load monitoring delay time / Load monit t_del		
SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 65.00 [s]	Access level: 3 Func. diagram: 8013 Unit selection: - Expert list: 1 Factory setting 10.00 [s]
Description:	Sets the delay time to evaluate the load monitoring.		

p2194[0...n]	Torque threshold value 2 / M_thresh val 2		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	100.00 [%]	90.00 [%]
Description:	Sets the torque threshold value for the message "Torque utilization < torque threshold value 2" (BO: r2199.11). The message "torque setpoint < p2174" (BO: r2198.10) and "torque utilization < p2194" (BO: r2199.11) are only evaluated after the run-up and the delay time has expired.		
Dependency:	Refer to: r0033, p2195, r2199		
p2194[0...n]	Force threshold value 2 / F_thresh val 2		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	100.00 [%]	90.00 [%]
Description:	Sets the force threshold value for the signal "force utilization < force threshold value 2" (BO: r2199.11). The message "force setpoint < p2174" (BO: r2198.10) and "force utilization < p2194" (BO: r2199.11) are only evaluated after the run-up and the delay time has expired.		
Dependency:	Refer to: r0033, p2195, r2199		
p2195[0...n]	Torque utilization switch-off delay / M_util t_off		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [ms]	1000.0 [ms]	800.0 [ms]
Description:	Sets the switch-off delay time for the negated signal "run-up completed". The message "torque setpoint < p2174" (BO: r2198.10) and "torque utilization < p2194" (BO: r2199.11) are only evaluated after the run-up and the delay time has expired.		
Dependency:	Refer to: p2174, p2194		
p2195[0...n]	Force utilization switch-off delay / F_util t_off		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [ms]	1000.0 [ms]	800.0 [ms]
Description:	Sets the switch-off delay time for the negated signal "run-up completed". The message "force setpoint < p2174" (BO: r2198.10) and "force utilization < p2194" (BO: r2199.11) are only evaluated after the run-up and the delay time has expired.		
Dependency:	Refer to: p2174, p2194		

2 Parameters

2.2 List of parameters

p2196[0...n]	Torque utilization scaling / M_util scal		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(3), U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.00 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.00 [%]	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the scaling factor for torque utilization (r0033).		

r2197.1...13	CO/BO: Status word monitoring 1 / ZSW monitor 1		
HLA	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -

Description: Display and BICO output for the first status word of the monitoring functions.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	01	v_act <= velocity threshold value 2 p2155	Yes	No	8010
	02	v_act > velocity threshold value 2 p2155	Yes	No	8010
	03	v_act >= 0	Yes	No	8011
	06	v_act > v_max	Yes	No	8010
	07	Velocity setpoint - actual value deviation in tolerance t_off	Yes	No	8011
	13	v_act > v_max (F07901)	Yes	No	-

Note: For bit 01, 02:
The threshold value is set in p2155 and the hysteresis in p2140.
For bit 03:
The hysteresis is set in p2150.
For bit 06:
The hysteresis is set in p2162.
For bit 07:
The threshold value is set in p2163 and the hysteresis is set in p2164.
For bit 13:
Only for internal Siemens use.

r2197.1...13	CO/BO: Status word monitoring 1 / ZSW monitor 1		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 2534 Unit selection: - Expert list: 1 Factory setting -

Description: Display and BICO output for the first status word of the monitoring functions.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	01	n_act <= speed threshold value 2 p2155	Yes	No	8010
	02	n_act > speed threshold value 2 p2155	Yes	No	8010
	03	n_act >= 0	Yes	No	8011
	06	n_act > n_max	Yes	No	8010
	07	Speed setp - act val deviation in tolerance t_off	Yes	No	8011
	13	n_act > n_max (F07901)	Yes	No	-

Note: For bit 01, 02:
The threshold value is set in p2155 and the hysteresis in p2140.

For bit 03:
The hysteresis is set in p2150.
For bit 06:
The hysteresis is set in p2162.
For bit 07:
The threshold value is set in p2163 and the hysteresis is set in p2164.
For bit 13:
Only for internal Siemens use.

	Min	Max	Factory setting
	-	-	-

Description: Display and BICO output for the first status word of the monitoring functions.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	01	v_act <= velocity threshold value 2 p2155	Yes	No	8010
	02	v_act > velocity threshold value 2 p2155	Yes	No	8010
	03	v_act >= 0	Yes	No	8011
	06	v_act > v_max	Yes	No	8010
	07	Velocity setpoint - actual value deviation in tolerance t_off	Yes	No	8011
	13	v_act > v_max (F07901)	Yes	No	-

Note: For bit 01, 02:
The threshold value is set in p2155 and the hysteresis in p2140.
For bit 03:
The hysteresis is set in p2150.
For bit 06:
The hysteresis is set in p2162.
For bit 07:
The threshold value is set in p2163 and the hysteresis is set in p2164.
For bit 13:
Only for internal Siemens use.

r2198.4...12**CO/BO: Status word monitoring 2 / ZSW monitor 2**

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 2

06	Current below the zero current threshold	Yes	No	8020
07	Speed deviation model/external intolerance	Yes	No	8012
11	Torque utilization < torque threshold value 2	Yes	No	8012

2 Parameters

2.2 List of parameters

12	Excitation current outside the tolerance range	Yes	No	8020
13	I2t alarm threshold exceeded (nur SESM)	Yes	No	8022
14	I2t fault threshold exceeded (nur SESM)	Yes	No	8022

Dependency:

Refer to: F07913

Note:

SESM: separately excited synchronous motor

For bit 00:
The speed threshold value 3 is set in p2161.

For bit 01:
The comparison value is set in p2141. We recommend setting the hysteresis (p2142) for canceling the bit to a value lower than that in p2141. Otherwise, the bit is not reset.

For bit 11:
The torque threshold value 2 is set in p2194.

For bit 13:
The I2t monitoring detects when the alarm threshold is exceeded (p3243), outputs fault A07823 and sets the status bit.

For bit 14:
The I2t monitoring detects when the fault threshold is exceeded (100 %), outputs fault A07824 and sets the status bit.

Dependency:	Refer to: r2229		

2 Parameters

2.2 List of parameters

r2225.0	CO/BO: Technology controller fixed value selection status word / Tec_ctr FixVal ZSW			
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: - Data type: Unsigned16 P-Group: Technology Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Display and BICO output for the status word of the fixed value selection of the technology controller.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Technology controller fixed value selected	Yes	No
				FP 7950, 7951
r2229	Technology controller number actual / Tec_ctrl No. act			
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: - Data type: Unsigned32 P-Group: Technology Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 7950 Unit selection: - Expert list: 1 Factory setting -	
Description:	Displays the number of the selected fixed setpoint of the technology controller.			
Dependency:	Refer to: r2224			
p2230[0...n]	Technology controller motorized potentiometer configuration / Tec_ctr mop config			
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 P-Group: Technology Not for motor type: - Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 7954 Unit selection: - Expert list: 1 Factory setting 0000 0100 bin	
Description:	Sets the configuration for the motorized potentiometer of the technology controller.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Data save active	Yes	No
	02	Initial rounding-off active	Yes	No
	03	Non-volatile data save active for p2230.0 = 1	Yes	No
	04	Ramp-function generator always active	Yes	No
				FP - - - -
Dependency:	Refer to: r2231, p2240			
Notice:	The following prerequisites must be fulfilled in order to be able to save the setpoint in a non-volatile fashion: - Firmware with V2.3 or higher. - Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).			
Note:	For bit 00: 0: The setpoint for the motorized potentiometer is not saved and after ON is entered using p2240. 1: The setpoint for the motorized potentiometer is saved and after ON is entered using r2231. In order to save in a non-volatile fashion, bit 03 should be set to 1.			

For bit 02:

0: Without initial rounding-off

1: With initial rounding-off.

The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed). The jerk for initial rounding is independent of the ramp-up time and only depends on the selected maximum value (p2237).

It is calculated as follows:

$$r = 0.0001 \times \max(p2237, |p2238|) [\%] / 0.13^2 [s^2]$$

The jerk is effective until the maximum acceleration is reached ($a_{\max} = p2237 [\%] / p2247 [s]$ or $a_{\max} = p2238 [\%] / p2248 [s]$), after which the drive continues to run linearly with constant acceleration.

The higher the maximum acceleration (the lower that p2247 is), the longer the ramp-up time increases with respect to the set ramp-up time.

For bit 03:

0: Non-volatile data save deactivated.

1: The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for p2230.0 = 1).

For bit 04:

When the bit is set, the ramp-function generator is computed independent of the pulse enable. The actual output value of the motorized potentiometer is always in r2250.

r2231 Technology controller motorized potentiometer setpoint memory / Tec_ctrl mop mem

SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: 9_1 Scaling: - Max - [%]	Access level: 2 Func. diagram: 7954 Unit selection: p0595 Expert list: 1 Factory setting - [%]
--	--	--	--

Description: Displays the setpoint memory for the motorized potentiometer of the technology controller.
For p2230.0 = 1, the last setpoint that was saved is entered after ON.

Dependency: Refer to: p2230

p2235[0...n] BI: Technology controller motorized potentiometer raise setpoint / Tec_ctrl mop raise

SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 7954 Unit selection: - Expert list: 1 Factory setting 0
--	--	---	--

Description: Sets the signal source to continually increase the setpoint for the motorized potentiometer of the technology controller.
The setpoint change (CO: r2250) depends on the set ramp-up time (p2247) and the duration of the signal that is present (BI: p2235).

Dependency: Refer to: p2236

2 Parameters

2.2 List of parameters

p2236[0...n]	BI: Technology controller motorized potentiometer lower setpoint / Tec_ctrl mop lower

Description:	Sets the minimum value for the motorized potentiometer of the technology controller.		
Dependency:	Refer to: p2237		
p2240[0...n]	Technology controller motorized potentiometer starting value / Tec_ctrl mop start		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min -200.00 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: 9_1 Scaling: - Max 200.00 [%]	Access level: 2 Func. diagram: 7954 Unit selection: p0595 Expert list: 1 Factory setting 0.00 [%]
Description:	Sets the starting value for the motorized potentiometer of the technology controller. For p2230.0 = 0, this setpoint is entered after ON.		
Dependency:	Refer to: p2230		

r2245	CO: Technology controller mot. potentiometer setpoint before RFG / Tec_ctr mop befRFG		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: 9_1 Scaling: PERCENT Max - [%]	Access level: 2 Func. diagram: 7954 Unit selection: p0595 Expert list: 1 Factory setting - [%]
Description:	Sets the effective setpoint in front of the internal motorized potentiometer ramp-function generator of the technology controller.		
Dependency:	Refer to: r2250		
p2247[0...n]	Technology controller motorized potentiometer ramp-up time / Tec_ctr mop t_r-up		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min 0.0 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.0 [s]	Access level: 2 Func. diagram: 7954 Unit selection: - Expert list: 1 Factory setting 10.0 [s]
Description:	Sets the ramp-up time for the internal ramp-function generator for the motorized potentiometer of the technology controller.		
Dependency:	Refer to: p2248		
Note:	The time is referred to 100 %. When the initial rounding-off is activated (p2230.2 = 1) the ramp-up is correspondingly extended.		
p2248[0...n]	Technology controller motorized potentiometer ramp-down time / Tec_ctrMop t_rdown		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min 0.0 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.0 [s]	Access level: 2 Func. diagram: 7954 Unit selection: - Expert list: 1 Factory setting 10.0 [s]
Description:	Sets the ramp-down time for the internal ramp-function generator for the motorized potentiometer of the technology controller.		
Dependency:	Refer to: p2247		
Note:	The time is referred to 100 %. When the initial rounding-off is activated (p2230.2 = 1) the ramp-down is correspondingly extended.		

2 Parameters

2.2 List of parameters

r2250	CO: Technology controller motorized potentiometer setpoint after RFG / Tec_ctr mop aftRFG		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: 9_1 Scaling: PERCENT Max - [%]	Access level: 2 Func. diagram: 7954 Unit selection: p0595 Expert list: 1 Factory setting - [%]
Description:	Displays the effective setpoint after the internal ramp-function generator for the motorized potentiometer of the technology controller.		
Dependency:	Refer to: r2245		

p2252	Technology controller configuration / Tec_ctrl config				
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Unsigned16 P-Group: Modulation Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0111 bin		
Description:	Sets the configuration of the technology controller.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Ramp-up/down time independent of setpoint sign	Yes	No	-
	01	Integrator independent of Kp	Yes	No	-
	02	Output signal without ramp active	Yes	No	-
	03	Act value limit	Yes	No	-

Dependency: Refer to: p2257, p2258, p2267, p2268, p2280, p2285

Note:

For bit 00 = 0:
The ramp-down time (p2258) switches to the ramp-up time (p2257) when the sign for the output signal r2260 changes. When the sign changes, the output signal is kept at zero for one arithmetic cycle.

For bit 00 = 1:
When r2260 exhibits a positive gradient, the ramp-up time (p2257) is active; when it exhibits a negative gradient, the ramp-down time (p2258) is active. The sign for r2260 does not have any effect on the ramp time.

For bit 01 = 0:
The integration time of the PID controller is evaluated with the gain factor Kp (p2280) (p2285 = integral time).

For bit 01 = 1:
The integration time of the PID controller is independent of the gain factor (p2285 = integration time) if p2280 > 0.

For bit 02 = 0:
When the PID controller is deactivated via p2200, the output signal r2294 is reduced to zero via the ramp-down time p2293.

For bit 02 = 1:
When the PID controller is deactivated via p2200, the output signal r2294 is set directly to zero.

For bit 03 = 0:
The actual values are not limited by p2267 and p2268.

For bit 03 = 1:
The actual values are limited by p2267 and p2268.

p2253[0...n]	CI: Technology controller setpoint 1 / Tec_ctrl setp 1

Note:	Limiting only active for p2252.3 = 1.		

p2268	Technology controller lower limit actual value / Tec_ctrl l_lim act		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min -10000.00 [%]	Calculated: - Dyn. index: - Unit group: 9_1 Scaling: PERCENT Max 10000.00 [%]	Access level: 3 Func. diagram: 7958 Unit selection: p0595 Expert list: 1 Factory setting -200.00 [%]
Description:	Sets the lower limit for the actual value signal of the technology controller.		
Dependency:	Refer to: p2252, p2264, p2265, p2271 Refer to: F07426		
Notice:	If the actual value falls below this lower limit, this results in fault F07426.		
Note:	Limiting only active for p2252.3 = 1.		

p2269	Technology controller gain actual value / Tech_ctrl gain act		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min 0.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 500.00 [%]	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the scaling factor for the actual value of the technology controller.		
Dependency:	Refer to: p2264, p2265, p2267, p2268, p2271		
Note:	For 100%, the actual value is not changed.		
p2270	Technology controller actual value function / Tec_ctr ActVal fct		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Integer16 P-Group: Technology Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting to use an arithmetic function for the actual value signal of the technology controller.		
Value:	0: Output (y) = input (x) 1: Root function (root from x) 2: Square function (x * x) 3: Cube function (x * x * x)		
Dependency:	Refer to: p2264, p2265, p2267, p2268, p2269, p2271		
p2271	Technology controller actual value inversion (sensor type) / Tech_ctrl act inv		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: T Data type: Integer16 P-Group: Technology Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting to invert the actual value signal of the technology controller. The inversion depends on the sensor type for the actual value signal.		
Value:	0: No inversion 1: Inversion actual value signal		
Caution:	If the actual value inversion is incorrectly selected, then the closed-loop control with the technology controller can become unstable and can oscillate!		
			
Note:	The correct setting can be determined as follows: - inhibit the technology controller (p2200 = 0). - increase the motor speed and in so doing, measure the actual value signal of the technology controller. --> If the actual value increases as the motor speed increases, then p2271 should be set to 0 (no inversion). --> If the actual value decreases as the motor speed increases, then p2271 should be set to 1 (the actual value signal is inverted).		

2 Parameters

2.2 List of parameters

r2272	CO: Technology controller actual value scaled / Tech_ctrl act scal		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: 9_1 Scaling: PERCENT Max - [%]	Access level: 2 Func. diagram: 7958 Unit selection: p0595 Expert list: 1 Factory setting - [%]
Description:	Display and connector output for the scaled actual value signal of the technology controller.		
Dependency:	Refer to: p2264, p2265, r2266, p2267, p2268, p2269, p2270, p2271		
<hr/>			
r2273	CO: Technology controller system deviation / Tec_ctrl sys_dev		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: 9_1 Scaling: PERCENT Max - [%]	Access level: 2 Func. diagram: 7958 Unit selection: p0595 Expert list: 1 Factory setting - [%]
Description:	Displays the system deviation between the setpoint and actual value of the technology controller.		
Dependency:	Refer to: p2263		
<hr/>			
p2274	Technology controller differentiation time constant / Tec_ctrl D comp T		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 60.000 [s]	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the time constant for the differentiation (D component) of the technology controller.		
Note:	p2274 = 0: Differentiation is disabled.		
<hr/>			
p2280	Technology controller proportional gain / Tec_ctrl Kp		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min 0.000	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000.000	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 1.000
Description:	Sets the proportional gain (P component) of the technology controller.		
Dependency:	Refer to: p2252		
Note:	p2280 = 0: The proportional gain is disabled.		

p2285	Technology controller integral time / Tec_ctrl Tn		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 60.000 [s]	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the integral time (I component, integrating time constant) of the technology controller.		
Dependency:	Refer to: p2252		
Note:	p2285 = 0: The integral time is disabled.		

p2286[0...n]	BI: Hold technology controller integrator / Tec_ctr integ hold		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Technology Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to hold the integrator for the technology controller.		

p2289[0...n]	CI: Technology controller pre-control signal / Tec_ctr prectr_sig		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Technology Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the pre-control signal of the technology controller.		

p2291	CO: Technology controller maximum limiting / Tec_ctrl max_lim		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min -200.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max 200.00 [%]	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the maximum limit of the technology controller.		
Dependency:	Refer to: p2292		
Caution:	The maximum limit must always be greater than the minimum limit (p2291 > p2292).		

p2292	CO: Technology controller minimum limiting / Tec_ctrl min_lim		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min -200.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max 200.00 [%]	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	Sets the minimum limit of the technology controller.		
Dependency:	Refer to: p2291		
Caution:	The maximum limit must always be greater than the minimum limit (p2291 > p2292).		

p2293	Technology controller ramp-up/ramp-down time / Tec_ctr t_RU/RD		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min 0.00 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100.00 [s]	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 1.00 [s]
Description:	Sets the ramping time for the output signal of the technology controller.		
Dependency:	Refer to: p2291, p2292		
Note:	The time refers to the set maximum and minimum limits (p2291, p2292).		

r2294	CO: Technology controller output signal / Tec_ctrl outp_sig		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max - [%]	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Display and connector output for the output signal of the technology controller.		
Dependency:	Refer to: p2295		

p2295	CO: Technology controller output scaling / Tec_ctrl outp_scal		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min -100.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max 100.00 [%]	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the scaling for the output signal of the technology controller.		

p2296[0...n]	CI: Technology controller output scaling / Tec_ctrl outp scal		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Technology Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 2295[0]
Description:	Sets the signal source for the scaling value of the technology controller.		
Dependency:	Refer to: p2295		

p2297[0...n]	CI: Technology controller maximum limit signal source / Tec_ctrMaxLimS_src		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Technology Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 2291[0]
Description:	Sets the signal source for the maximum limiting of the technology controller.		
Dependency:	Refer to: p2291		

p2298[0...n]	CI: Technology controller minimum limit signal source / Tec_ctrl min_l s_s		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Technology Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 2292[0]
Description:	Sets the signal source for the minimum limiting of the technology controller.		
Dependency:	Refer to: p2292		

p2299[0...n]	CI: Technology controller limit offset / Tech_ctrl lim offs		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Technology Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the offset of the output limiting of the technology controller.		

p2306	Technology controller system deviation inversion / Tec_ctr SysDev inv		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: T Data type: Integer16 P-Group: Technology Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting to invert the system deviation of the technology controller. The setting depends on the type of control loop.		
Value:	0: No inversion 1: Inversion		
Caution:	If the actual value inversion is incorrectly selected, then the closed-loop control with the technology controller can become unstable and can oscillate!		
			
Note:	The correct setting can be determined as follows: - inhibit the technology controller (p2200 = 0). - increase the motor speed and in so doing, measure the actual value signal (of the technology controller). - if the actual value increases with increasing motor speed, then the inversion should be switched out. - if the actual value decreases with increasing motor speed, then the inversion should be set. If value = 0: The drive reduces the output speed when the actual value rises (e.g. for heating fans, intake pump, compressor). If value = 1: The drive increases the output speed when the actual value increases (e.g. for cooling fans, discharge pumps).		

r2349.0...13	CO/BO: Technology controller status word / Tec_ctrl ZSW				
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: - Data type: Unsigned32 P-Group: Technology Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting -		
Description:	Display and BICO output for the status word of the technology controller.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Technology controller deactivated	Yes	No	-
	01	Technology controller limited	Yes	No	-
	02	Technology controller motorized potentiometer limited max	Yes	No	-
	03	Technology controller motorized potentiometer limited min	Yes	No	-
	04	Technology controller speed setpoint total in setpoint channel	Yes	No	-
	05	Technology controller RFG bypassed in the setpoint channel	Yes	No	-
	06	Technology controller starting value at the current limit	No	Yes	-
	08	Technology controller actual value at the minimum	Yes	No	-
	09	Technology controller actual value at the maximum	Yes	No	-
	10	Technology controller output at the minimum	Yes	No	-

11	Technology controller output at the maximum	Yes	No	-
12	Fault response active	Yes	No	-
13	Technology controller limiting enable	Yes	No	-

p2369 BI: Closed-loop cascade control, control word / Csc_ctrl STW

VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
--	--	--	---

Description: Sets the signal source for the selection of the "Switch-in motor" function.
When the function is selected, monitoring of the switches is deactivated with the "bypass" function. This means that the power unit can be connected to other motors via an external control without switch monitoring responding.

p2502[0...n] LR encoder assignment / Encoder assignment

SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: C2(25) Data type: Integer16 P-Group: Closed loop position control Not for motor type: - Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 3	Access level: 1 Func. diagram: 4010 Unit selection: - Expert list: 1 Factory setting 1
--	---	---	--

Description: Setting to assign the encoder.
The actual value preprocessing and the closed-loop position control are carried out using the assigned encoder.

Value:
0: No encoder
1: Encoder 1
2: Encoder 2
3: Encoder 3

Dependency: Refer to: p0187, p0188, p0189

Notice: For the setting p2502 = 0 (no encoder), closed-loop position control is not possible. This setting is only practical as supportive measure to implement encoderless closed-loop speed control (e.g. if the motor encoder is defective).

Note: The assigned encoder (p2502 = 1, 2, 3) must be allocated an encoder data set (p0187, p0188, p0189).

p2503[0...n] LR length unit LU per 10 mm / LU per 10 mm

SERVO (APC, Position control), VECTOR (Position control), SERVO_AC (APC, Position control), VECTOR_AC (Position control), SERVO_I_AC (APC)	Can be changed: C2(25) Data type: Unsigned32 P-Group: Closed loop position control Not for motor type: - Min 1 [LU]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 2147483647 [LU]	Access level: 1 Func. diagram: 4010 Unit selection: - Expert list: 1 Factory setting 10000 [LU]
--	---	---	---

Description: Sets the neutral length units LU per 10 mm.
Therefore, for a linear scale, a reference is established between the physical arrangement and the neutral length units LU used in the drive.

Example:

Linear scale, 10 mm should be broken down to units of μm (i.e. 1 LU = 1 μm).

--> p2503 = 10000

Note: The assignment to the grid spacing can be achieved using this for a rotary axis with linear encoder.
LU: Length Unit

2 Parameters

2.2 List of parameters

p2504[0...n]	LR motor/load motor distance / Mot/load motor dis		
SERVO (APC, Lin, Position control), SERVO_AC (APC, Lin, Position control), SERVO_I_AC (APC, Lin)	Can be changed: C2(25) Data type: Unsigned32 P-Group: Closed loop position control Not for motor type: - Min 1	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1048576	Access level: 1 Func. diagram: 4010, 4704, 4711 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the motor distance for the gearbox factor between the motor shaft and load shaft. Gearbox factor = motor distance (p2504) / load path (p2505)		
Dependency:	Refer to: p0432, p0433, p2505		
Note:	The gearbox factor between the encoder shaft and the motor shaft is set using p0432 and p0433.		
p2504[0...n]	LR motor/load motor revolutions / Mot/load motor rev		
SERVO (APC, Position control), VECTOR (Position control), SERVO_AC (APC, Position control), VECTOR_AC (Position control), SERVO_I_AC (APC)	Can be changed: C2(25) Data type: Unsigned32 P-Group: Closed loop position control Not for motor type: - Min 1	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1048576	Access level: 1 Func. diagram: 4010, 4704, 4711 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the motor revolutions for the gearbox factor between the motor shaft and load shaft. Gearbox factor = motor revolutions (p2504) / load revolutions (p2505)		
Dependency:	Refer to: p0432, p0433, p2505		
Note:	The gearbox factor between the encoder shaft and the motor shaft is set using p0432 and p0433.		
p2505[0...n]	LR motor/load load revolutions / Mot/load load rev		
SERVO (APC, Position control), VECTOR (Position control), SERVO_AC (APC, Position control), VECTOR_AC (Position control), SERVO_I_AC (APC)	Can be changed: C2(25) Data type: Integer32 P-Group: Closed loop position control Not for motor type: - Min -1048576	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1048576	Access level: 1 Func. diagram: 4010, 4704, 4711 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the load revolutions for the gearbox factor between the motor shaft and load shaft. Gearbox factor = motor revolutions (p2504) / load revolutions (p2505)		
Dependency:	Refer to: p0432, p0433, p2504		
Note:	The gearbox factor between the encoder shaft and the motor shaft is set using p0432 and p0433.		
p2506[0...n]	LR length unit LU per load path / LU per load path		
SERVO (APC, Lin, Position control), SERVO_AC (APC, Lin, Position control), SERVO_I_AC (APC, Lin)	Can be changed: C2(25) Data type: Unsigned32 P-Group: Closed loop position control Not for motor type: - Min 1 [LU]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 2147483647 [LU]	Access level: 1 Func. diagram: 4010 Unit selection: - Expert list: 1 Factory setting 10000 [LU]
Description:	Sets the neutral length units LU per load path. Therefore, for a rotary encoder, a reference is established between the physical arrangement and the neutral length units LU used in the drive. Example: Rotary encoder, ballscrew with 10 mm/revolution, 10 mm should be broken down to units of μm (i.e. 1 LU = 1 μm). -> One load path corresponds to 10000 LU -> p2506 = 10000		

Note: The position controller can only process position setpoints in the interpolator clock cycle (IPO clock cycle) in integer length units (LU, Length Unit). This is the reason that speed setpoints that are not a multiple integer of 1 LU per IPO clock cycle can only be realized as an average. The result speed setpoint steps are especially noticeable for a high loop gain or when the pre-control is active. Increasing p2506 counteracts this behavior.

p2506[0...n] LR length unit LU per load revolution / LU per load rev

SERVO (APC, Position control), VECTOR (Position control), SERVO_AC (APC, Position control), VECTOR_AC (Position control), SERVO_I_AC (APC)	Can be changed: C2(25)	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: 4010
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 1 [LU]	Max 2147483647 [LU]	Factory setting 10000 [LU]

Description: Sets the neutral length units LU per load revolution. Therefore, for a rotary encoder, a reference is established between the physical arrangement and the neutral length units LU used in the drive.
Example:
Rotary encoder, ballscrew with 10 mm/revolution, 10 mm should be broken down to units of μm (i.e. 1 LU = 1 μm).
--> One load revolution corresponds to 10000 LU
--> p2506 = 10000

Note: The position controller can only process position setpoints in the interpolator clock cycle (IPO clock cycle) in integer length units (LU, Length Unit). This is the reason that speed setpoints that are not a multiple integer of 1 LU per IPO clock cycle can only be realized as an average. The result speed setpoint steps are especially noticeable for a high loop gain or when the pre-control is active. Increasing p2506 counteracts this behavior.

p2507[0...n] LR absolute encoder adjustment status / Abs_enc_adj stat

SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: 4010
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 3	Factory setting 1

Description: Activating the adjustment and display of the status of the adjustment for absolute encoders.

Value:
0: Error occurred while adjusting
1: Absolute encoder not adjusted
2: Absolute encoder not adjusted and encoder adjustment initiated
3: Absolute encoder adjusted

Dependency: Refer to: p2525, p2598, p2599, p2733

Caution:  For rotating absolute encoders, when adjusting, a range is set up symmetrically around zero with half of the encoder range, within which the position must be re-established after switch-off/switch-on. In this range, it is only permissible that the encoder overflows.

After the adjustment has been completed, it must be guaranteed that the range is not exited. The reason for this is that outside the range, there is no clear reference any longer between the encoder actual value and mechanical system.

If the reference point (CI: p2598) lies in this range, then the position actual value is set when adjusting to the reference point. Otherwise, adjustment is canceled with F07443.

There is no overflow for linear absolute encoders. This means that after the adjustment, the position can be re-established in the complete traversing range after switch-off/switch-on. When adjusting, the position actual value is set to the reference point.

Note: The encoder adjustment is initiated with p2507 = 2. The status is displayed using the other values.

In order to permanently save the determined position offset (p2525) and the DDS number (p2733), they must be saved in a non-volatile fashion (p0971, p0977).

This adjustment can only be initiated for an absolute encoder.

	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	5	1	
Description:	Sets the behavior of the position actual value preprocessing for the position controller for a DDS changeover. For p2519 = 1: In the following cases, for a DDS changeover, the actual position actual value becomes invalid and the reference point is reset: - the EDS effective for the closed-loop position control changes. - the encoder assignment changes (p2502). - the mechanical relationships change (p2503 ... p2506). - the direction of rotation changes (p1821). For absolute encoders, the status of the adjustment (p2507) is also reset if the same absolute encoder remains selected for the closed-loop position control, but the mechanical relationships or the direction of rotation have changed. In the operation state, in addition, a fault (F07494) is generated.			
Notice:	The remaining setting values are intended for expanded functionality.			
Note:	The behavior for a DDS changeover is determined using the value of p2519 in the target data set.

r2523[0...3]	CO: LR measured value / Measured value		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: Integer32 P-Group: Closed loop position control Not for motor type: - Min - [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 4010 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Display and connector output for the value determined by the function "reference mark search" and "measuring probe evaluation".		
Index:	[0] = Position control [1] = Encoder 1 [2] = Encoder 2 [3] = Encoder 3		
Dependency:	Refer to: p2502, r2526		

Note: r2526.2 = 1 --> The measured value in r2523[0] for the position control is valid.
 r2527.2 = 1 --> The measured value in r2523[1] for encoder 1 is valid.
 r2528.2 = 1 --> The measured value in r2523[2] for encoder 2 is valid.
 r2529.2 = 1 --> The measured value in r2523[3] for encoder 3 is valid.

r2524	CO: LR LU/mm / LU/mm		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min - [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 3630, 4010 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Display and connector output for the internal length units LU/mm.		
Dependency:	Refer to: p0404		

r2524	CO: LR LU/revolution / LU/revolution		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min - [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 3630, 4010 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Display and connector output for the internal length units LU/motor revolution.		
Dependency:	Refer to: p0404		

p2525[0...n]	CO: LR encoder adjustment offset / Enc_adj offset		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T Data type: Unsigned32 P-Group: Closed loop position control Not for motor type: - Min 0 [LU]	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 4294967295 [LU]	Access level: 4 Func. diagram: 4010 Unit selection: - Expert list: 1 Factory setting 0 [LU]
Description:	Position offset when adjusting the absolute encoder.		
Dependency:	Refer to: p0404, p2507, p2733		
Note:	The position offset is only relevant for absolute encoders. The drive determines the value when adjusting the absolute encoder and the user should not change it.		

r2526.0...9	CO/BO: LR status word / ZSW			
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: Unsigned16 P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Display and BICO output for the status word of the position controller.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Position actual value valid	Yes	No
	01	Referencing active	Yes	No
	02	Measured value valid	Yes	No
	03	Position control active	Yes	No
	04	Fixed stop reached	Yes	No
				FP 4010, 4015 4010 3615, 4010 4015 3617, 4025

2 Parameters

2.2 List of parameters

05	Fixed stop outside window	Yes	No	3617, 4025
06	Position controller output limited	Yes	No	4015
07	Request tracking mode	Yes	No	-
08	Clamping active when traveling to fixed stop	Yes	No	4025
09	Setting value for adjustment valid	Yes	No	-

Dependency: Refer to: r2521, r2522, r2523

Note: For bit 04:
The signal is influenced via p2634.
For bit 05:
The signal is influenced via p2635.

r2527.0...2 CO/BO: LR actual value sensing status word encoder 1 / ActValSensZSW enc1

SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: -	Calculated: -	Access level: 1

SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting

Description: Display and BICO output for the status word of the position actual value sensing from encoder 3.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Position actual value valid	Yes	No	-
	01	Referencing active	Yes	No	-
	02	Measured value valid	Yes	No	-

p2530	CI: LR position setpoint / s_set			
SERVO (EPOS, Position control), VECTOR (EPOS, Position control), SERVO_AC (EPOS, Position control), VECTOR_AC (EPOS, Position control)	Can be changed: T Data type: Unsigned32 / Integer32 P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 4015, 4020 Unit selection: - Expert list: 1 Factory setting 0	
Description:	Sets the signal source for the position setpoint of the position controller.			
Dependency:	Refer to: r2665			
Note:	When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2530 = r2665			
p2531	CI: LR velocity setpoint / v_set			
SERVO (EPOS, Position control), VECTOR (EPOS, Position control), SERVO_AC (EPOS, Position control), VECTOR_AC (EPOS, Position control)	Can be changed: T Data type: Unsigned32 / Integer32 P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 4015 Unit selection: - Expert list: 1 Factory setting 0	
Description:	Sets the signal source for the velocity setpoint of the position controller.			
Dependency:	Refer to: r2666			
Note:	When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2531 = r2666			
p2532	CI: LR position actual value / s_act			
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T Data type: Unsigned32 / Integer32 P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 4015, 4020, 4025 Unit selection: - Expert list: 1 Factory setting 2521[0]	
Description:	Sets the signal source for the position actual value of the position controller.			
Dependency:	Refer to: r2521			
p2533[0...n]	LR position setpoint filter time constant / s_set_filt T			
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min 0.00 [ms]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.00 [ms]	Access level: 1 Func. diagram: 4015 Unit selection: - Expert list: 1 Factory setting 0.00 [ms]	
Description:	Sets the time constant for the position setpoint filter (PT1).			
Note:	The effective Kv factor (position loop gain) is reduced with the filter. This allows a softer control behavior with improved tolerance with respect to noise/disturbances. Applications: - reduces the pre-control dynamic response. - jerk limiting.			

2 Parameters

2.2 List of parameters

p2534[0...n]	LR velocity pre-control factor / v_prectrl fact		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4015, 4025
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	200.00 [%]	0.00 [%]
Description:	Setting to activate and weight the velocity pre-control value. Value = 0 % --> The pre-control is deactivated.		
Dependency:	Refer to: p2535, p2536, r2563		
Note:	When the axis control loop is optimally set as well as a precisely determined equivalent time constant of the velocity control loop, the pre-control factor is 100%.		

p2534[0...n]	LR speed pre-control factor / n_prectrl fact		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4015, 4025
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	200.00 [%]	0.00 [%]
Description:	Setting to activate and weight the speed pre-control value. Value = 0 % --> The pre-control is deactivated.		
Dependency:	Refer to: p2535, p2536, r2563		
Note:	When the axis control loop is optimally set as well as a precisely determined equivalent time constant of the speed control loop, the pre-control factor is 100%.		

p2535[0...n]	LR velocity pre-control balancing filter dead time / v_prectrlFit t_dead		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4015
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	2.00	0.00
Description:	Sets the "fractional" dead time to emulate the timing behavior of the velocity control loop. The selected multiplier refers to the position controller clock cycle (deadtime= p2535 * p0115[4]).		
Dependency:	Refer to: p0115, p2536		
Notice:	When velocity pre-control is active (p2534 > 0 %), the following applies: In addition to the set dead time (p2535), internally two position controller clock cycles are effective. When velocity pre-control is inactive (p2534 = 0 %), the following applies: No dead time is effective (p2535 and internal).		
Note:	Together with p2536, the timing behavior of the velocity control loop can be emulated.		

p2535[0...n]	LR speed pre-control balancing filter dead time / n_prectrlFit t_dead		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4015
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	2.00	0.00
Description:	Sets the "fractional" dead time to emulate the timing behavior of the speed control loop. The selected multiplier refers to the position controller clock cycle (deadtime= p2535 * p0115[4]).		
Dependency:	Refer to: p0115, p2536		

- Notice:** When speed pre-control is active (p2534 > 0 %), the following applies:
 In addition to the set dead time (p2535), internally two position controller clock cycles are effective.
 When speed pre-control is inactive (p2534 = 0 %), the following applies:
 No dead time is effective (p2535 and internal).
- Note:** Together with p2536, the timing behavior of the closed-loop control loop can be emulated.

p2536[0...n]	LR velocity pre-control balancing filter PT1 / v_prectrl filt PT1		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4015
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	100.00 [ms]	0.00 [ms]
Description:	Sets a PT1 filter to emulate the timing behavior of the velocity control loop.		
Dependency:	Refer to: p2535		
Notice:	When velocity pre-control is inactive (p2534 = 0 %), the following applies: If a PT1 filter has been set, it is not effective.		
Note:	Together with p2535, the timing behavior of the velocity control loop can be emulated.		

p2536[0...n]	LR speed pre-control symmetrizing filter PT1 / n_prectrl filt PT1		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4015
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	100.00 [ms]	0.00 [ms]
Description:	Sets a PT1 filter to emulate the timing behavior of the closed-speed control loop.		
Dependency:	Refer to: p2535		
Notice:	When speed pre-control is inactive (p2534 = 0 %), the following applies: If a PT1 filter has been set, it is not effective.		
Note:	Together with p2535, the timing behavior of the closed-loop control loop can be emulated.		

p2537	CI: LR position controller adaptation / Adaptation		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 4015
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the adaptation of the proportional gain of the position controller.		
Dependency:	Refer to: p2538		

p2538[0...n]	LR proportional gain / Kp		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4015
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [1000 rpm]	300.000 [1000 rpm]	1.000 [1000 rpm]
Description:	Sets the proportional gain (P gain, position loop gain, Kv factor) of the position controller.		
Dependency:	Refer to: p2537, p2539, p2555, r2557, r2558		

2 Parameters

2.2 List of parameters

Note: The proportional gain is used define at which traversing velocity which following error is obtained (without pre-control)
 Low proportional gain:
 Slow response to a setpoint - actual value difference, the following error becomes large.
 High proportional gain:
 Fast response to the setpoint - actual value difference, the following error becomes small.

p2539[0...n]	LR integral time / Tn		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min 0.00 [ms]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100000.00 [ms]	Access level: 1 Func. diagram: 4015 Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Setting to activate the integral time of the position controller. Value = 0 ms --> The I component of the position controller is deactivated.		
Dependency:	Refer to: p2538, r2559		

p2540	CO: LR position controller output velocity limit / LR_outp v_lim		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min 0.000 [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 3 Func. diagram: 4015 Unit selection: p0505 Expert list: 1 Factory setting 1000.000 [m/min]
Description:	Setting and connector output for the velocity limit of the position controller output.		
Dependency:	Refer to: p2541		

p2540	CO: LR position controller output speed limit / LR_outp n_lim		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min 0.000 [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 3 Func. diagram: 4015 Unit selection: p0505 Expert list: 1 Factory setting 210000.000 [rpm]
Description:	Setting and connector output for the speed limit of the position controller output.		
Dependency:	Refer to: p2541		

p2541	CI: LR position controller output velocity limit signal source / LR_out v_lim S_src		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: p2000 Max -	Access level: 1 Func. diagram: 4015 Unit selection: - Expert list: 1 Factory setting 2540[0]
Description:	Sets the signal source for the position controller output limit.		
Dependency:	Refer to: p2540		

p2541	CI: LR position controller output speed limit signal source / LR_out n_lim S_src		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: p2000 Max -	Access level: 1 Func. diagram: 4015 Unit selection: - Expert list: 1 Factory setting 2540[0]
Description:	Sets the signal source for the position controller output limit.		
Dependency:	Refer to: p2540		
p2542	LR standstill window / Standstill window		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T Data type: Unsigned32 P-Group: Closed loop position control Not for motor type: - Min 0 [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147483647 [LU]	Access level: 1 Func. diagram: 4020 Unit selection: - Expert list: 1 Factory setting 200 [LU]
Description:	Sets the standstill window for the standstill monitoring function. After the standstill monitoring time expires, it is cyclically checked whether the difference between the setpoint and actual position is located within the standstill window and, if required, an appropriate fault is output. Value = 0 --> The standstill monitoring is deactivated.		
Dependency:	Refer to: p2543, p2544 Refer to: F07450		
Note:	The following applies for the setting of the standstill and positioning window: Standstill window (p2542) >= positioning window (p2544)		
p2543	LR standstill monitoring time / t_standstill monit		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min 0.00 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100000.00 [ms]	Access level: 1 Func. diagram: 4020 Unit selection: - Expert list: 1 Factory setting 200.00 [ms]
Description:	Sets the standstill monitoring time for the standstill monitoring function. After the standstill monitoring time expires, it is cyclically checked whether the difference between the setpoint and actual position is located within the standstill window and, if required, an appropriate fault is output.		
Dependency:	Refer to: p2542, p2545 Refer to: F07450		
Note:	The following applies for the setting of the standstill and positioning monitoring time: Standstill monitoring time (p2543) <= positioning monitoring time (p2545)		
p2544	LR positioning window / Pos_window		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T Data type: Unsigned32 P-Group: Closed loop position control Not for motor type: - Min 0 [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147483647 [LU]	Access level: 1 Func. diagram: 4020 Unit selection: - Expert list: 1 Factory setting 40 [LU]
Description:	Sets the positioning window for the positioning monitoring function. After the positioning monitoring time expires, it is checked once as to whether the difference between the setpoint and actual position lies within the positioning window and if required an appropriate fault is output. Value = 0 --> The positioning monitoring function is deactivated.		

2 Parameters

2.2 List of parameters

Dependency: Refer to: p2542, p2545, r2684
Refer to: F07451

Note: The following applies for the setting of the standstill and positioning window:
Standstill window (p2542) >= positioning window (p2544)

p2545	LR positioning monitoring time / t_pos_monit		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4020
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	100000.00 [ms]	1000.00 [ms]

Description: Sets the positioning monitoring time for the positioning monitoring.
After the positioning monitoring time expires, it is checked once as to whether the difference between the setpoint and actual position lies within the positioning window and if required an appropriate fault is output.

Dependency: Refer to: p2543, p2544, r2684
Refer to: F07451

Note: The following applies for the setting of the standstill and positioning monitoring time:
Standstill monitoring time (p2543) <= positioning monitoring time (p2545)

p2546[0...n]	LR dynamic following error monitoring tolerance / s_delta_monit tol		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: 4025
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [LU]	2147483647 [LU]	1000 [LU]

Description: Sets the tolerance for the dynamic following error monitoring.
If the dynamic following error (r2563) exceeds the selected tolerance, then an appropriate fault is output.
Value = 0 --> The dynamic following error monitoring is deactivated.

Dependency: Refer to: r2563, r2684
Refer to: F07452

Note: The tolerance bandwidth is intended to prevent the dynamic following error monitoring incorrectly responding due to operational control sequences (e.g. during load surges).

p2547	LR cam switching position 1 / Cam position 1		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: -	Func. diagram: 4025
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-2147483648 [LU]	2147483647 [LU]	0 [LU]

Description: Sets the cam switching position 1.

Dependency: Refer to: p2548, r2683

Caution: Only after the axis has been referenced can it be guaranteed that the cam switching signals when output have a "true" position reference.

Note: Position actual value <= cam switching position 1 --> r2683.8 = 1 signal
Position actual value > cam switching position 1 --> r2683.8 = 0 signal

p2548	LR cam switching position 2 / Cam position 2		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T Data type: Integer32 P-Group: Closed loop position control Not for motor type: - Min -2147483648 [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147483647 [LU]	Access level: 1 Func. diagram: 4025 Unit selection: - Expert list: 1 Factory setting 0 [LU]
Description:	Sets the cam switching position 2.		
Dependency:	Refer to: p2547, r2683		
Caution:	Only after the axis has been referenced can it be guaranteed that the cam switching signals when output have a "true" position reference.		
			
Note:	Position actual value <= cam switching position 2 --> r2683.9 = 1 signal Position actual value > cam switching position 2 --> r2683.9 = 0 signal		
p2549	BI: LR enable 1 / Enable 1		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 4015 Unit selection: - Expert list: 1 Factory setting 899.2
Description:	Sets the signal source for the position controller enable 1.		
Dependency:	Refer to: r0899, p2550		
Note:	The position controller is enabled by the following AND logic operation: - BI: p2549 - BI: p2550		
p2550	BI: LR enable 2 / Enable 2		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 4015 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the position controller enable 2.		
Dependency:	Refer to: p2549		
Note:	The position controller is enabled by the following AND logic operation: - BI: p2549 - BI: p2550 When the function module "position control" or "basic positioner" is activated, the following BICO interconnection is established: - BI: p2550 = 1		

2 Parameters

2.2 List of parameters

p2551	BI: LR setpoint signal fixed / Mess setp fixed		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 4020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the "setpoint fixed" signal. BI: p2551 = 1 signal: The end of the positioning operation on the setpoint side is signaled and the positioning and standstill monitoring activated. BI: p2551 = 0 signal: The start of a positioning operation or tracking mode on the setpoint side is signaled and the positioning and standstill monitoring deactivated.		
Dependency:	Refer to: p2554, r2683		
Note:	When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2551 = r2683.2		

p2552	BI: LR signal travel to fixed stop active / Signal TfS act		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 4025 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the signal "travel to fixed stop active". BI: p2552 = 1 signal: The activity associated with travel to fixed stop is signaled and the detection of the fixed stop is started via the maximum following error (p2634).		
Dependency:	Refer to: r2683		
Note:	When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2552 = r2683.14		

p2553	BI: LR signal fixed stop reached / Signal fixed stop		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 4025 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the signal "fixed stop reached". BI: p2553 = 1 signal: When the fixed stop is reached, this is signaled and the fixed stop monitoring window is activated.		
Dependency:	Refer to: r2683		
Note:	When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2553 = r2683.12		

p2554	BI: LR signal traversing command active / Sig trav_cmnd act		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 4020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the signal "traversing command active". BI: p2554 = 1 signal: It is signaled that positioning is active and therefore the positioning monitoring is not activated with the signal "setpoint fixed" (p2551).		
Dependency:	Refer to: p2551, r2684		
Note:	When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established: BI: p2554 = r2684.15		
p2555	CI: LR LU/revolution LU/mm / LU/rev LU/mm		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 4015 Unit selection: - Expert list: 1 Factory setting 2524[0]
Description:	Sets the signal source for the reference of the internal length units LU to motor revolution for rotary encoders and to mm for linear encoders.		
Dependency:	Refer to: p0404, r2524		
Note:	The signal value is used to convert the length unit to the speed or velocity setpoint.		
r2556	CO: LR position setpoint after setpoint smoothing / s_set after interp		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: Integer32 P-Group: Closed loop position control Not for motor type: - Min - [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 4015 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Display and connector output for the position setpoint after setpoint smoothing.		
r2557	CO: LR position controller input system deviation / LR_inp sys dev		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: Integer32 P-Group: Closed loop position control Not for motor type: - Min - [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 4015 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Display and connector output for the difference between the position setpoint and the position actual value at the position controller input.

	P-Group: Closed loop position control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the I component at the output of the position controller (speed setpoint).		

r2560	CO: LR velocity setpoint / v_set		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: -	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4015
	P-Group: Closed loop position control	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Display and connector output for the velocity setpoint after limiting (CI: p2541).		

r2560	CO: LR speed setpoint / n_set		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 1 Func. diagram: 4015 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Display and connector output for the speed setpoint after limiting (CI: p2541).		

r2561	CO: LR velocity pre-control value / v_prectrl val		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max - [m/min]	Access level: 1 Func. diagram: 4015 Unit selection: p0505 Expert list: 1 Factory setting - [m/min]
Description:	Display and connector output for the velocity setpoint as a result of precontrol.		

r2561	CO: LR speed pre-control value / n_prectrl val		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 1 Func. diagram: 4015 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Display and connector output for the speed setpoint as a result of precontrol.		

r2562	CO: LR velocity setpoint total / v_set total		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max - [m/min]	Access level: 1 Func. diagram: 4015 Unit selection: p0505 Expert list: 1 Factory setting - [m/min]
Description:	Display and connector output for the total velocity setpoint. This value is obtained from the sum of the velocity pre-control and position controller output.		
Dependency:	Refer to: r2560, r2561		

r2562	CO: LR total speed setpoint / n_set total		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 1 Func. diagram: 4015 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Display and connector output for the total speed setpoint. This value is obtained from the sum of the speed pre-control and position controller output.		
Dependency:	Refer to: r2560, r2561		

2 Parameters

2.2 List of parameters

r2563	CO: LR following error dynamic model / Follow error dyn		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: Integer32 P-Group: Closed loop position control Not for motor type: - Min - [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 4025 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Display and connector output for the dynamic following error. This value is the deviation, corrected by the velocity-dependent component, between the position setpoint and the position actual value.		
Note:	For p2534 >= 100 % (pre-control activated) the following applies: The dynamic following error (r2563) corresponds to the system deviation (r2557) at the position controller input. For 0 % < p2534 < 100 % (pre-control activated) or p2534 = 0 % (pre-control deactivated) the following applies: The dynamic following error (r2563) is the deviation between the measured position actual value and a value that is calculated from the position setpoint via a PT1 model. This compensates the system-related velocity-dependent system deviation for a P controller.		
r2564	CO: LR force pre-control value / F_prectrl val		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min - [N]	Calculated: - Dyn. index: - Unit group: 8_1 Scaling: p2003 Max - [N]	Access level: 1 Func. diagram: 4015 Unit selection: p0505 Expert list: 1 Factory setting - [N]
Description:	Display and connector output for the force setpoint.		
Dependency:	Refer to: p1511, p1512		
Note:	The force pre-control value is the derivation over time of the velocity pre-control value and is referred to a high inertia mass of 1000.0 kg. When using the pre-control, then this should be evaluated corresponding to the actual mass.		
r2564	CO: LR torque pre-control value / M_prectrl val		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed loop position control Not for motor type: - Min - [Nm]	Calculated: - Dyn. index: - Unit group: 7_1 Scaling: p2003 Max - [Nm]	Access level: 1 Func. diagram: 4015 Unit selection: p0505 Expert list: 1 Factory setting - [Nm]
Description:	Display and connector output for the torque precontrol value.		
Dependency:	Refer to: p1511, p1512		
Note:	The torque pre-control value is the derivation over time of the speed pre-control value and is referred to a moment of inertia of 1 kgm ² /2 PI. When using the pre-control, then this should be evaluated corresponding to the actual moment of inertia.		
r2565	CO: LR following error actual / Following err act		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: Integer32 P-Group: Closed loop position control Not for motor type: - Min - [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 4015 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Display and connector output for the actual following error. This value is the deviation between the position setpoint - after fine interpolation - and the position actual value.		

Notice: When speed pre-control is active (p2534 > 0 %), the following applies:
To calculate this value, the position setpoint is delayed by two position controller clock cycles.
When speed pre-control is inactive (p2534 = 0 %), the following applies:
To calculate this value, the position setpoint is delayed by two position controller clock cycles.

r2566	LR velocity input pre-control / v inp prectrl		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: -	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4015
	P-Group: Closed loop position control	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Displays the velocity at the input of the pre-control channel.		
Note:	This display parameter is used for diagnostics even when the pre-control is inactive (p2534 = 0%).		

r2566	LR speed input pre-control / n inp prectrl		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: -	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4015
	P-Group: Closed loop position control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the speed at the input of the pre-control channel.		
Note:	This display parameter is used for diagnostics even when the pre-control is inactive (p2534 = 0%).		

p2567[0...n]	LR force pre-control mass / F_prectrl mass		
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4015
	P-Group: Closed loop position control	Unit group: 27_1	Unit selection: p0100
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000000 [kg]	10000.000000 [kg]	1.000000 [kg]
Description:	Sets the mass for the force pre-control.		
Dependency:	Refer to: p2534, r2564		
Note:	When calculating the force pre-control value (r2654), the derivation over time of the speed pre-control value is multiplied by p2567. For reasons associated with the compatibility to earlier firmware releases, the factory setting for p2567 = 1 kg. This means that CO: r2564 remains, as standard, the derivation over time of the velocity pre-control value and refers, as before, to a weight of 1 kg. For force pre-control, the mass can now be directly entered into p2567 (instead of subsequently evaluating the pre-control value).		

p2567[0...n]	LR torque pre-control moment of inertia / M_prectrl M_inertia		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4015
	P-Group: Closed loop position control	Unit group: 25_1	Unit selection: p0100
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000000 [kgm ²]	100000.000000 [kgm ²]	0.159155 [kgm ²]
Description:	Sets the moment of inertia for the torque pre-control.		
Dependency:	Refer to: p2534, r2564		

2 Parameters

2.2 List of parameters

Note: When calculating the torque pre-control value (r2654), the time derivation of the speed pre-control value is multiplied by $2 \text{ PI} * p2567$.

For reasons associated with the compatibility to earlier firmware versions, the factory setting for p2567 = $1 \text{ kgm}^2/2 \text{ PI}$. This means that CO: r2564 remains as standard the derivation over time of the speed pre-control value and is referred, as before, to a moment of inertia of $1 \text{ kgm}^2/2 \text{ PI}$. For torque pre-control, the moment of inertia can now be directly entered into p2567 (instead of subsequently evaluating the pre-control value).

p2568		BI: EPOS STOP cam activation / STOP cam act		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3630	
	P-Group: Basic positioner	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source to activate the function "STOP cam".			
	BI: p2568 = 1 signal			
	--> The evaluation of the STOP cam minus (BI: p2569) and STOP cam plus (BI: p2570) is active.			
Dependency:	Refer to: p2569, p2570			
Note:	The traversing range can also be limited using software limit switches.			

p2569		BI: EPOS STOP cam minus / STOP cam minus		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3630	
	P-Group: Basic positioner	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	1	
Description:	Sets the signal source for the STOP cam in the negative direction of travel.			
Recommendation:	Set the OFF3 ramp-down time (p1135), so that the axis, after reaching the STOP cam at the maximum velocity, does not move through a higher braking travel than is actually available.			
	Sets message 07491 as alarm (A07491):			
	Set the maximum deceleration (p2573), so that the axis, after reaching the STOP cam at the maximum velocity, does not move through a higher braking travel than is actually available.			
Dependency:	Refer to: p1135, p2568, p2570, p2573, r2684			
	Refer to: F07491			
Caution:	The STOP cams are low active.			
	Sets message 07491 as fault (F07491):			
	For a 0 signal, the axis is stopped with the OFF3 ramp-down time (p1135), status signal r2684.13 is set to 1, saved and the appropriate fault is output. After the fault has been acknowledged, only motion moving away from the STOP cam is permitted.			
	For a 0/1 signal and valid travel direction, when the STOP cam is exited, this is detected and the status signal r2684.13 is set to 0.			
	Sets message 07491 as alarm (A07491):			
	For a 0 signal, the axis is stopped with the maximum deceleration (p2573), status signal r2684.13 is set to 1, saved and the appropriate alarm is output. Only motion away from the STOP cam is permitted.			
	For a 0/1 signal and valid travel direction, when the STOP cam is exited, this is detected and the status signal r2684.13 is set to 0 and the alarm is deleted.			

p2570	BI: EPOS STOP cam plus / STOP cam plus		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3630 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for the STOP cam in the positive direction of travel.		
Recommendation:	Set the OFF3 ramp-down time (p1135), so that the axis, after reaching the STOP cam at the maximum velocity, does not move through a higher braking travel than is actually available. Sets message 07492 as alarm (A07492): Set the maximum deceleration (p2573), so that the axis, after reaching the STOP cam at the maximum velocity, does not move through a higher braking travel than is actually available.		
Dependency:	Refer to: p1135, p2568, p2569, p2573, r2684 Refer to: F07492		
Caution: 	The STOP cams are low active. Sets message 07492 as fault (F07492): For a 0 signal, the axis is stopped with the OFF3 ramp-down time (p1135), status signal r2684.14 is set to 1, saved and the appropriate fault is output. After the fault has been acknowledged, only motion moving away from the STOP cam is permitted. For a 0/1 signal and valid travel direction, when the STOP cam is exited, this is detected and the status signal r2684.14 is set to 0. Sets message 07492 as alarm (A07492): For a 0 signal, the axis is stopped with the maximum deceleration (p2573), status signal r2684.14 is set to 1, saved and the appropriate alarm is output. Only motion away from the STOP cam is permitted. For a 0/1 signal and valid travel direction, when the STOP cam is exited, this is detected and the status signal r2684.14 is set to 0 and the alarm is deleted.		
p2571	EPOS maximum velocity / v_max		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Unsigned32 P-Group: Basic positioner Not for motor type: - Min 1 [1000 LU/min]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 40000000 [1000 LU/min]	Access level: 1 Func. diagram: 3630 Unit selection: - Expert list: 1 Factory setting 30000 [1000 LU/min]
Description:	Sets the maximum velocity for the "basic positioner" function (EPOS).		
Dependency:	Refer to: r1084, r1087, p2503, p2504, p2505, p2506		
Note:	The maximum velocity is active in all of the operating modes of the basic positioner. The maximum velocity for the basic positioner should be aligned with the maximum speed/velocity of the speed/velocity controller: Rotary encoders: $p2571[1000 \text{ LU/min}] = \min(r1084 , r1087)[\text{rpm}] \times p2505/p2504 \times p2506/1000$ Linear encoders: $p2571[1000 \text{ LU/min}] = \min(r1084 , r1087)[\text{m/min}] \times p2503/10[\text{m}]$		
p2572	EPOS maximum acceleration / a_max		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 P-Group: Basic positioner Not for motor type: - Min 1 [1000 LU/s ²]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2000000 [1000 LU/s ²]	Access level: 1 Func. diagram: 3630 Unit selection: - Expert list: 1 Factory setting 100 [1000 LU/s ²]
Description:	Sets the maximum acceleration for the "basic positioner" function (EPOS).		
Dependency:	Refer to: p2619, p2644		

2 Parameters

2.2 List of parameters

Note: The maximum acceleration appears to exhibit jumps (without jerk).
"Traversing blocks" operating mode:
The programmed acceleration override (p2619) acts on the maximum acceleration.
"Direct setpoint input/MDI" mode:
The acceleration override is effective (p2644, 4000 hex = 100 %).
"Jog" and "search for reference" modes
No acceleration override is active. The axis starts with the maximum acceleration.

p2573	EPOS maximum deceleration / -a_max		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 3630
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [1000 LU/s ²]	2000000 [1000 LU/s ²]	100 [1000 LU/s ²]

Description: Sets the maximum deceleration for the "basic positioner" function (EPOS).
Dependency: Refer to: p2620, p2645
Note: The maximum deceleration appears to exhibit jumps (without jerk).
"Traversing blocks" operating mode:
The programmed deceleration override (p2620) acts on the maximum deceleration.
"Direct setpoint input/MDI" mode:
The deceleration override is effective (p2645, 4000 hex = 100 %).
"Jog" and "search for reference" modes
No deceleration override is effective. The axis breaks with the maximum deceleration.

p2574	EPOS jerk limiting / Jerk lim		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 3635
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [1000 LU/s ³]	100000000 [1000 LU/s ³]	10000 [1000 LU/s ³]

Description: Sets the jerk limiting
Dependency: Refer to: p2572, p2573, p2575
Note: The jerk limiting is internally converted into a jerk time as follows:
$$\text{Jerk time } T_r = \max(p2572, p2573) / p2574$$

The jerk time is internally limited to 1000 ms and is rounded-off to an integer multiple of the sampling time positioning (p0115[5]).
The jerk time is valid for the acceleration and deceleration phases also for unequal maximum acceleration (p2572) and maximum deceleration (p2573).
For unequal maximum acceleration and maximum deceleration, the motion is not optimal from a time perspective as the jerk limit cannot be used for the lower of the two values.
If, in the traversing profile, the acceleration time without jerk limiting is less than the jerk time T_r , then the motion with jerk limiting is not optimum from a time perspective.
For traversing motion with a direct transition between acceleration and deceleration (i.e. jerk time is greater than the constant velocity phase), jerk can increase up to twice the parameterized jerk.
CONTINUE_FLYING with direction reversal acts internally just like a CONTINUE_WITH_STOP without the "position reached" being set. Without jerk limiting, this behavior can hardly be noticed as, when reversing, the position setpoint is only kept at zero for one interpolator clock cycle.
For block change enable CONTINUE_WITH_STOP, jerk limiting results in a longer delay time.

p2575	BI: EPOS jerk limiting activation / Jerk limit act		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to activate the jerk limiting. Activating/deactivating: - using BI: p2575 = 1 signal or 0 signal. - using the command JERK in the traversing block (only for BI: p2575 = 0 signal).		
Dependency:	Refer to: p2574		
Note:	A change of the signal state at the binector input is only accepted at zero speed.		
p2576	EPOS modulo correction modulo range / Modulo corr range		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 P-Group: Basic positioner Not for motor type: - Min 1 [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147482647 [LU]	Access level: 1 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting 360000 [LU]
Description:	Sets the modulo range for axes with modulo correction.		
Dependency:	Refer to: p2577		
p2577	BI: EPOS modulo correction activation / Modulo corr act		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3630, 3635 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to activate modulo correction.		
Dependency:	Refer to: p2576		
Note:	When the signal state changes at the binector input, this only becomes effective in the "ready for switching on" state. Selecting modulo correction: The actual position setpoint in the modulo range is corrected. The position actual value differs from the position setpoint by the following error and can also leave the modulo range. De-selecting modulo correction: It is based on the actual position actual value.		
p2578	CI: EPOS software limit switch minus signal source / SW limSw Min S_src		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Integer32 P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3630 Unit selection: - Expert list: 1 Factory setting 2580[0]
Description:	Sets the signal source for the software limit switch minus.		
Dependency:	Refer to: p2579, p2580, p2581, p2582 Refer to: A07469, A07477, A07479, F07481		
Notice:	A change to the software limit switch becomes immediately effective. If the software limit switch is changed, then this results in the positions in the traversing blocks being checked.		

2 Parameters

2.2 List of parameters

Note: The following applies for the setting of the software limit switch:
Software limit switch minus < software limit switch plus

p2579	CI: EPOS software limit switch plus signal source / SW limSwPlus S_src		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Integer32	Dyn. index: -	Func. diagram: 3630

	Min	Max	Factory setting
	-2147482648 [LU]	2147482647 [LU]	-2147482648 [LU]

Description: Sets the software limit switch in the negative direction of travel.

Dependency: Refer to: p2578, p2579, p2581, p2582

p2581	CO: EPOS software limit switch plus / SW lim switch plus		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: -	Func. diagram: 3630
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-2147482648 [LU]	2147482647 [LU]	2147482647 [LU]

Description: Sets the software limit switch in the positive direction of travel.

Dependency: Refer to: p2578, p2579, p2580, p2582

p2582	BI: EPOS software limit switch activation / SW lim sw act		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3630
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to activate the "software limit switch".

Dependency: Refer to: p2578, p2579, p2580, p2581

Caution: Software limit switch effective:

- axis is referenced (r2684.11 = 1) and BI: p2582 = 1 signal.

Software limit switch ineffective:

- modulo correction active (BI: p2577 = 1 signal).

- search for reference is executed.

Notice: Target position for relative positioning outside software limit switch:
 The traversing block is started and the axis comes to a standstill at the software limit switch. An appropriate alarm is output and the traversing block is interrupted. Traversing blocks with valid position can be activated.
 Target position for absolute positioning outside software limit switch:
 In the "traversing blocks" mode, the traversing block is not started and an appropriate fault is output.
 Axis outside the valid traversing range:
 If the axis is already outside the valid traversing range, then an appropriate fault is output. The fault can be acknowledged at standstill. Traversing blocks with valid position can be activated.

Note: The traversing range can also be limited using STOP cams.

p2583	EPOS backlash compensation / Backlash comp		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min -200000 [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 200000 [LU]	Access level: 1 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting 0 [LU]
Description:	Sets the amount of play (backlash) for positive or negative play. 0: The backlash compensation is deactivated. > 0: Positive backlash (normal case) When the direction is reversed, the encoder actual value leads the actual value. < 0: Negative backlash When the direction is reversed, the actual value leads the encoder actual value.		
Dependency:	If a stationary axis is referenced by setting the reference point, or an adjusted with absolute encoder is switched on, then the setting of p2604 is relevant for entering the compensation value. p2604 = 1: Traveling in the positive direction -> A compensation value is immediately entered. Traveling in the negative direction -> A compensation value is not entered p2604 = 0: Traveling in the positive direction -> A compensation value is not entered Traveling in the negative direction -> A compensation value is immediately entered. When again setting the reference point (a referenced axis) or for "flying referencing", p2604 is not relevant but instead the history of the axis. Refer to: p2604, r2667		

p2585	EPOS jog 1 setpoint velocity / Jog 1 v_set		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min -40000000 [1000 LU/min]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 40000000 [1000 LU/min]	Access level: 1 Func. diagram: 3610 Unit selection: - Expert list: 1 Factory setting -300 [1000 LU/min]

1 signal: Flying referencing
0 signal: Search for reference

Dependency: Refer to: p2595

Note: Referencing is activated as follows:
- Select the referencing type (BI: p2597)
- Start referencing (BI: p2595 = 0/1 signal)

p2598[0...3]	CI: EPOS reference point coordinate signal source / Ref_pt coord S_src		
SERVO (EPOS, Position control), VECTOR (EPOS, Position control), SERVO_AC (EPOS, Position control), VECTOR_AC (EPOS, Position control)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Integer32	Dyn. index: -	Func. diagram: 3612, 3614
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	[0] 2599[0]
			[1] 0
			[2] 0
			[3] 0

Description: Sets the signal source for the reference point coordinate.
This value is used as reference for the following referencing operations:

- search for reference
- set reference point
- flying referencing
- absolute value adjustment

Index: [0] = Position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p2502, p2507, p2595, p2596, p2597, p2599

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following applies:

Incremental measuring system:

After the reference point is reached, the drive accepts the actual axis position from the position received via the connector input p2598[0].

Absolute encoder:

When adjusting the encoder, the position received via the connector input is set as the actual axis position. The position offset to the actual encoder value is displayed in p2525.

p2599	CO: EPOS reference point coordinate value / Ref_pt coord val		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: -	Func. diagram: 3612
	P-Group: Closed loop position control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-2147482648 [LU]	2147482647 [LU]	0 [LU]

Description: Sets the position value for the reference point coordinate.
This value is set as the actual axis position after referencing or adjustment.

Dependency: Refer to: p2507, p2525, p2595, p2596, p2597, p2598

p2600	EPOS search for reference reference point offset / Ref_pt offset		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: -	Func. diagram: 3612
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-2147482648 [LU]	2147482647 [LU]	0 [LU]

Description: Sets the reference point offset for search for reference.

Dependency: Refer to: p2598

p2601	EPOS flying referencing inner window / Inner window		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min 0 [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147482647 [LU]	Access level: 1 Func. diagram: 3614 Unit selection: - Expert list: 1 Factory setting 0 [LU]
Description:	Sets the inner window for flying referencing. Value = 0: The evaluation of the inner window is deactivated.		
Dependency:	Refer to: p2597, p2602, r2684		
Notice:	The inner window must be set so that it is smaller than the outer window.		
Note:	If the difference between the reference point coordinate and detected actual position is less than the inner window, then no correction is executed for a referenced axis. If the difference between the reference point coordinate and detected actual position is greater than the inner window and less than the outer window (p2602), then a correction is executed for a referenced axis.		
p2602	EPOS flying referencing outer window / Outer window		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min 0 [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147482647 [LU]	Access level: 1 Func. diagram: 3614 Unit selection: - Expert list: 1 Factory setting 0 [LU]
Description:	Sets the outer window for flying referencing. Value = 0: The evaluation of the outer window is deactivated.		
Dependency:	Refer to: p2597, r2684 Refer to: A07489		
Notice:	The inner window must be set so that it is smaller than the outer window.		
Note:	If the difference between the reference point coordinate and detected actual position is greater than the outer window, then no correction is executed for the referenced axis. Further, an appropriate message is output and r2684.3 is set to 1.		
p2603	EPOS flying referencing, positioning mode relative / Pos_mode relative		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 1 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the relative positioning mode for flying referencing. Value = 1: The corrected setpoint is not calculated into the traversing distance. Value = 0: The corrected setpoint is calculated into the traversing distance.		
Dependency:	Refer to: p2597, p2623, p2648		
Notice:	For p2603 = 0 the direction can change.		

p2604	BI: EPOS search for reference start direction / Srch for ref dir		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3612 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal sources for the start direction of the search for reference. 1 signal: Start in the negative direction. 0 signal: Start in the positive direction.		
Dependency:	Refer to: p2583, p2595, p2597		
p2605	EPOS search for reference approach velocity reference cam / v_appr ref_cam		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Unsigned32 P-Group: Basic positioner Not for motor type: - Min 1 [1000 LU/min]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 40000000 [1000 LU/min]	Access level: 1 Func. diagram: 3612 Unit selection: - Expert list: 1 Factory setting 5000 [1000 LU/min]
Description:	Sets the approach velocity to the reference cam for the search for reference.		
Dependency:	The search for reference only starts with the approach velocity to the reference cam when there is a reference cam (p2607 = 1). Refer to: p2595, p2597, p2604, p2606, p2607		
Note:	When traversing to the reference cam, the velocity override is effective. If, at the start of the search for reference, the axis is already at the reference cam, then the axis immediately starts to traverse to the zero mark.		
p2606	EPOS search for reference reference cam maximum distance / Ref_cam max s		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Unsigned32 P-Group: Basic positioner Not for motor type: - Min 0 [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147482647 [LU]	Access level: 1 Func. diagram: 3612 Unit selection: - Expert list: 1 Factory setting 2147482647 [LU]
Description:	Sets the maximum distance after the start of the search for reference when traversing to the reference cam.		
Dependency:	Refer to: p2595, p2597, p2604, p2605, p2607 Refer to: F07458		
Note:	When using a reversing cam, the maximum distance must be set appropriately long.		
p2607	EPOS search for reference reference cam present / Ref_cam pres		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Unsigned8 P-Group: Basic positioner Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 1 Func. diagram: 3612 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets whether or not a reference cam is present for the search for reference. Value = 1: Reference cam present. Value = 0: No reference cam present.		
Dependency:	Refer to: p2595, p2597, p2604, p2605, p2606		

2 Parameters

2.2 List of parameters

p2608	EPOS search for reference approach velocity zero mark / v_appr ref_ZM		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Unsigned32 P-Group: Basic positioner Not for motor type: - Min 1 [1000 LU/min]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 40000000 [1000 LU/min]	Access level: 1 Func. diagram: 3612 Unit selection: - Expert list: 1 Factory setting 300 [1000 LU/min]
Description:	Sets the approach velocity after detecting the reference cam to search for the zero mark for the search for reference.		
Dependency:	If there is no reference cam (p2607 = 0), the search for reference immediately starts with the axis traversing to the zero mark. Refer to: p2595, p2597, p2604, p2607, p2609, p2610		
Caution:	If the reference cam is not adjusted so that at each search for reference the same zero mark for synchronization is detected, then an "incorrect" axis reference point is obtained. After the reference cam has been left, the search for the zero mark is activated with a time delay due to internal factors. This is the reason that the reference cam should be adjusted in this center between two zero marks and the approach velocity should be adapted to the distance between two zero marks.		
			
Note:	The velocity override is not effective when traversing to the zero mark.		
p2609	EPOS search for reference max distance ref cam and zero mark / Max s ref_cam ZM		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Unsigned32 P-Group: Basic positioner Not for motor type: - Min 0 [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147482647 [LU]	Access level: 1 Func. diagram: 3612 Unit selection: - Expert list: 1 Factory setting 20000 [LU]
Description:	Sets the maximum distance after leaving the reference cam when traversing to the zero mark.		
Dependency:	Refer to: p2595, p2597, p2604, p2607, p2608, p2610 Refer to: F07459		
p2610	EPOS search for ref. tol. bandwidth for distance to zero mark / Tol_band to ZM		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Unsigned32 P-Group: Basic positioner Not for motor type: - Min 0 [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147482647 [LU]	Access level: 1 Func. diagram: 3612 Unit selection: - Expert list: 1 Factory setting 2147482647 [LU]
Description:	Sets the tolerance bandwidth for the distance to the zero mark The zero mark is evaluated within the maximum distance between the reference cam and zero mark (p2609) minus the tolerance bandwidth for the distance to the zero mark (p2610).		
Dependency:	Refer to: p2609		
p2611	EPOS search for reference approach velocity reference point / v_appr ref_pt		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Unsigned32 P-Group: Basic positioner Not for motor type: - Min 1 [1000 LU/min]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 40000000 [1000 LU/min]	Access level: 1 Func. diagram: 3612 Unit selection: - Expert list: 1 Factory setting 300 [1000 LU/min]
Description:	Sets the approach velocity after detecting the zero mark to approach the reference point.		
Dependency:	Refer to: p2595, p2597, p2604, p2607, p2609, p2610		
Note:	When traversing to the reference point, the velocity override is not effective.		

p2612	BI: EPOS search for reference reference cam / Ref_cam		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3612
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the reference cam.		
Dependency:	Refer to: p2607		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p2613	BI: EPOS search for reference reversing cam minus / Rev minus		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3612
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the reversing cam in the negative direction of travel. 1 signal: Reversing cam not reached. 0 signal: Reversing cam reached.		
Dependency:	Refer to: p2614		
Note:	If, during the search for reference from the reversing cam minus and plus, a 0 signal is detected, then the axis remains stationary (at standstill).		

p2614	BI: EPOS search for reference reversing cam plus / Rev plus		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3612
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the reversing cam in the negative direction of travel. 1 signal: Reversing cam not reached. 0 signal: Reversing cam reached.		
Dependency:	Refer to: p2613		
Note:	If, during the search for reference from the reversing cam minus and plus, a 0 signal is detected, then the axis remains stationary (at standstill).		

p2615	EPOS maximum number of traversing blocks / Trav_block qty max		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: C2(17)	Calculated: -	Access level: 1
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 3616
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	64	64
Description:	Sets the maximum number of traversing blocks that are available.		
Dependency:	Refer to: p2616, p2617, p2618, p2619, p2620, p2621, p2622, p2623, p2624		

2 Parameters

2.2 List of parameters

p2616[0...n]	EPOS traversing block block number / Trav_blk, blkNo.		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Integer16 P-Group: Basic positioner Not for motor type: - Min -1	Calculated: - Dyn. index: p2615 Unit group: - Scaling: - Max 63	Access level: 1 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting -1
Description:	Sets a block number. -1: Invalid block number. These blocks are not taken into account. 0 ... 63: valid block number.		
Dependency:	The number of indices depends on p2615. Refer to: p2615, p2617, p2618, p2619, p2620, p2621, p2622, p2623, p2624		
<hr/>			
p2617[0...n]	EPOS traversing block position / Trav_block pos		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min -2147482648 [LU]	Calculated: - Dyn. index: p2615 Unit group: - Scaling: - Max 2147482647 [LU]	Access level: 1 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting 0 [LU]
Description:	Sets the target position for the traversing block.		
Dependency:	The number of indices depends on p2615. Refer to: p2615, p2616, p2618, p2619, p2620, p2621, p2622, p2623, p2624		
Note:	The target position is approached in either relative or absolute terms depending on p2623.		
<hr/>			
p2618[0...n]	EPOS traversing block velocity / Trav_block v		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min 1 [1000 LU/min]	Calculated: - Dyn. index: p2615 Unit group: - Scaling: - Max 40000000 [1000 LU/min]	Access level: 1 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting 600 [1000 LU/min]
Description:	Sets the velocity for the traversing block.		
Dependency:	The number of indices depends on p2615. Refer to: p2615, p2616, p2617, p2619, p2620, p2621, p2622, p2623, p2624, p2646		
Note:	The velocity can be influenced using the velocity override (p2646).		
<hr/>			
p2619[0...n]	EPOS traversing block acceleration override / Trav_block a_over		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Basic positioner Not for motor type: - Min 1.0 [%]	Calculated: - Dyn. index: p2615 Unit group: - Scaling: - Max 100.0 [%]	Access level: 1 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the acceleration override for the traversing block. The override refers to the maximum acceleration (p2572).		
Dependency:	The number of indices depends on p2615. Refer to: p2572, p2615, p2616, p2617, p2618, p2620, p2621, p2622, p2623, p2624		

p2620[0...n]	EPOS traversing deceleration override / Trav_block -a_over		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Basic positioner Not for motor type: - Min 1.0 [%]	Calculated: - Dyn. index: p2615 Unit group: - Scaling: - Max 100.0 [%]	Access level: 1 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the deceleration override for the traversing block. The override refers to the maximum deceleration (p2573).		
Dependency:	The number of indices depends on p2615. Refer to: p2573, p2615, p2616, p2617, p2618, p2619, p2621, p2622, p2623, p2624		
Notice:	If, when calculating the traversing profile, it is identified that the target position of the next block with the programmed deceleration override will not be reached without direction reversal (flying block change), then the old (actual) deceleration override remains effective.		
p2621[0...n]	EPOS traversing block task / Trav_block task		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Integer16 P-Group: Basic positioner Not for motor type: - Min 1	Calculated: - Dyn. index: p2615 Unit group: - Scaling: - Max 9	Access level: 1 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the required task for the traversing block.		
Value:	1: POSITIONING 2: FIXED STOP 3: ENDLESS_POS 4: ENDLESS_NEG 5: WAITING 6: GOTO 7: SET_O 8: RESET_O 9: JERK		
Dependency:	The number of indices depends on p2615. Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2622, p2623, p2624		
p2622[0...n]	EPOS traversing block task parameter / Trav_blk task_par		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min -2147483648	Calculated: - Dyn. index: p2615 Unit group: - Scaling: - Max 2147483647	Access level: 1 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets additional information/data of the appropriate task for the traversing block.		
Dependency:	The number of indices depends on p2615. Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2621, p2623, p2624		
Note:	The following should be set depending on the task: FIXED STOP: Clamping torque and clamping force (rotary 0...65536 [0.01 Nm], linear 0...65536 [N]) WAIT: Delay time [ms] GOTO: Block number SET_O: 1, 2 or 3 - set direct output 1, 2 or 3 (both) RESET_O: 1, 2 or 3 - reset direct output 1, 2 or 3 (both) JERK: 0 - deactivate, 1 - activate		

2 Parameters

2.2 List of parameters

p2623[0...n]	EPOS traversing block task mode / Trav_block mode		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Unsigned16 P-Group: Basic positioner Not for motor type: - Min 0	Calculated: - Dyn. index: p2615 Unit group: - Scaling: - Max 65535	Access level: 1 Func. diagram: 3515, 3616 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the influence of the task for the traversing block. Value = 0000 cccc bbbb aaaa cccc: Positioning mode cccc = 0000 --> ABSOLUTE cccc = 0001 --> RELATIVE cccc = 0010 --> ABS_POS (only for a rotary axis with modulo correction) cccc = 0011 --> ABS_NEG (only for a rotary axis with modulo correction) bbbb: Progression condition bbbb = 0000 --> END bbbb = 0001 --> CONTINUE WITH STOP bbbb = 0010 --> CONTINUE FLYING bbbb = 0011 --> CONTINUE EXTERNAL bbbb = 0100 --> CONTINUE EXTERNAL WAIT bbbb = 0101 --> CONTINUE EXTERNAL ALARM aaaa: IDs aaaa = 000x --> show/hide block (x = 0: show, x = 1: hide)		
Dependency:	The number of indices depends on p2615. Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2621, p2622, p2624		

p2624	EPOS traversing block sorting / Trav_block sort		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: U, T Data type: Unsigned16 P-Group: Basic positioner Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 1 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the traversing blocks for sorting corresponding to their block number. Procedure: Set p2624 = 0 --> 1. Sorting is started and the parameters are automatically reset to zero once the operation has been completed.		
Dependency:	Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2621, p2622, p2623		
Note:	After sorting, the traversing blocks are written at the beginning of the memory in increasing sequence without any gaps.		

p2625	BI: EPOS traversing block selection bit 0 / Trav_blk sel bit 0		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3616, 3640 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to select the traversing block, bit 0.		
Dependency:	Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks. Refer to: p2626, p2627, p2628, p2629, p2630		

p2626	BI: EPOS traversing block selection bit 1 / Trav_blk sel bit 1		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3616, 3640
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to select the traversing block, bit 1.		
Dependency:	Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks. Refer to: p2625, p2627, p2628, p2629, p2630		

p2627	BI: EPOS traversing block selection bit 2 / Trav_blk sel bit 2		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3616, 3640
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to select the traversing block, bit 2.		
Dependency:	Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks. Refer to: p2625, p2626, p2628, p2629, p2630		

p2628	BI: EPOS traversing block selection bit 3 / Trav_blk sel bit 3		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3616, 3640
	P-Group: Basic positioner	Unit group: -	Unit selection: -

Description:	Sets the signal source to select the traversing block, bit 3.		
Dependency:	Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks. Refer to: p2625, p2626, p2627, p2629, p2630		

p2629	BI: EPOS traversing block selection bit 4 / Trav_blk sel bit 4		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3616, 3640
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to select the traversing block, bit 4.		
Dependency:	Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks. Refer to: p2625, p2626, p2627, p2628, p2630		

2 Parameters

2.2 List of parameters

p2630	BI: EPOS traversing block selection bit 5 / Trav_blk sel bit 5		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min - Max -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3616, 3640 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to select the traversing block, bit 5.		
Dependency:	Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks. Refer to: p2625, p2626, p2627, p2628, p2629		
<hr/>			
p2631	BI: EPOS activate traversing task (0 -> 1) / Trav_task act		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min - Max -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3616, 3625 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for "activating traversing task". BI: p2631 = 0/1 signal The traversing task, selected using BI: p2625 ... p2630, is started.		
Dependency:	Refer to: p2625, p2626, p2627, p2628, p2629, p2630, p2640, p2641		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	To start a traversing block, the axis must be referenced (r2684.11 = 1). The status signal r2684.12 = 0/1 signal is used for acknowledgment. A traversing task can be influenced using the following signals: - intermediate stop via BI: p2640. - reject traversing task via BI: p2641.		
<hr/>			
p2632	EPOS external block change evaluation / Ext BickChg eval		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Integer16 P-Group: Basic positioner Not for motor type: - Min 0 Max 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 1 Func. diagram: 3615, 3616 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the mode to evaluate "external block change".		
Value:	0: External block change via the measuring probe 1: External block change via BI: p2633		
Dependency:	Refer to: p2623, p2633, r2677, r2678		
Note:	In the mode "external block change via measuring probe (p2632 = 0), the following applies: When starting a traversing block with the block change enable CONTINUE_EXTERNAL, CONTINUE_EXTERNAL_WAIT and CONTINUE_EXTERNAL_ALARM an activated "flying referencing" is interrupted. After ending the block, "flying referencing" must be re-activated via BI: p2595 = 0/1 signal.		

p2633	BI: EPOS external block change (0 -> 1) / Ext BlckChg (0->1)		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3615 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for "external block change". BI: p2633 = 0/1 signal		
Dependency:	The evaluation of the signal is only active p2632 = 1. Refer to: p2623, p2632, p2640, p2641, r2677, r2678		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	A 0/1 edge initiates a flying block change in the subsequent traversing block. When the external block change is identified, the actual position is saved in r2678. A traversing task can be influenced using the following signals: - intermediate stop via BI: p2640. - reject traversing task via BI: p2641.		
p2634[0...n]	EPOS fixed stop maximum following error / Following err max		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T Data type: Unsigned32 P-Group: Closed loop position control Not for motor type: - Min 0 [LU]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 2147482647 [LU]	Access level: 1 Func. diagram: 3617, 4025 Unit selection: - Expert list: 1 Factory setting 1000 [LU]
Description:	Sets the following error to detect the "fixed stop reached" state (r2526.4).		
Dependency:	Refer to: r2526, p2621, r2675		
Note:	The state "fixed stop reached" is detected if the following error exceeds the theoretically calculated following error value by p2634.		
p2635	EPOS fixed stop monitoring window / Fixed stop monit		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: U, T Data type: Unsigned32 P-Group: Closed loop position control Not for motor type: - Min 0 [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147482647 [LU]	Access level: 1 Func. diagram: 3617, 4025 Unit selection: - Expert list: 1 Factory setting 100 [LU]
Description:	Sets the monitoring window of the actual position after the fixed stop is reached.		
Dependency:	Refer to: r2526, r2683 Refer to: F07484		
Note:	If, after the fixed stop is reached, the end stop shifts in either the positive or negative direction by more than the value set here, then BO: r2526.5 is set to 1 and an appropriate message is output.		

2 Parameters

2.2 List of parameters

p2637	BI: EPOS fixed stop reached / Fixed stop reached		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3616, 3617 Unit selection: - Expert list: 1 Factory setting 2526.4
Description:	Sets the signal source for the feedback signal "fixed stop reached". BI: p2637 = 1 signal Fixed stop is reached. BI: p2637 = 0 signal Fixed stop is not reached.		
Dependency:	Refer to: r2526, p2634		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The identification of "fixed stop reached" is, for the factory setting, dependent on the signal BO: r2526.4 (fixed stop reached). This signal is influenced via p2634 (EPOS fixed stop, maximum following error).		

p2638	BI: EPOS fixed stop outside the monitoring window / Fixed stop outside		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 3616, 3617 Unit selection: - Expert list: 1 Factory setting 2526.5
Description:	Sets the signal source for the feedback signal "fixed stop outside the monitoring window". BI: p2638 = 1 signal Fixed stop is located outside the monitoring window. BI: p2638 = 0 signal Fixed stop is inside the monitoring window.		
Dependency:	Refer to: r2526, p2635		
Note:	The identification of "fixed stop outside the monitoring window" is, for the factory setting, dependent on signal BO: r2526.5 (fixed stop outside window). This signal is influenced via p2635 (EPOS fixed stop monitoring window).		

p2639	BI: EPOS force limit reached / F_limit reached		
SERVO (EPOS, Lin), SERVO_AC (EPOS, Lin)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting 1407.7
Description:	Sets the signal source for the feedback signal "force limit reached" when traversing to fixed stop. BI: p2639 = 1 signal Force limit has been reached. BI: p2639 = 0 signal Force limit has not been reached.		
Dependency:	Refer to: r1407		
Note:	The feedback signal from "force limit reached" is, for the factory setting, dependent on the signal BO: r1407.7 (torque limit reached).		

p2639	BI: EPOS torque limit reached / M_limit reached		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3616
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1407.7
Description:	Sets the signal source for the feedback signal "torque limit reached" when traversing to fixed stop. BI: p2639 = 1 signal Torque limit is reached. BI: p2639 = 0 signal Torque limit is not reached.		
Dependency:	Refer to: r1407		
Note:	The feedback signal from "torque limit reached" is, for the factory setting, dependent on the signal BO: r1407.7 (torque limit reached).		

p2640	BI: EPOS intermediate stop (0 signal) / Intermediate stop		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3616, 3620, 3625
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the "no intermediate stop/intermediate stop". BI: p2640 = 1 signal No intermediate stop. BI: p2640 = 0 signal Intermediate stop.		
Dependency:	Refer to: p2631, p2641, p2647, p2649		
Caution:	For BI: p2649 = 1 signal, the following applies: Motion starts without any explicit control signal.		
			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	This signal is only effective in the modes "traversing blocks" and "direct setpoint input/MDI". When activating the intermediate stop, the axis brakes with the parameterized deceleration (p2620 or p2645).		

p2641	BI: EPOS reject traversing task (0 signal) / Trav_task reject		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3616, 3620, 3625
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for "do not reject traversing task/reject traversing task". BI: p2641 = 1 signal Do not reject traversing task. BI: p2641 = 0 signal Reject traversing task.		
Dependency:	Refer to: p2631, p2640, p2647, p2649		
Caution:	For BI: p2649 = 1 signal, the following applies: Motion starts without any explicit control signal.		
			

2 Parameters

2.2 List of parameters

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: This signal is only effective in the modes "traversing blocks" and "direct setpoint input/MDI".
When activating reject traversing tasks, then the axis brakes with the maximum deceleration (p2573).

p2642 **CI: EPOS direct setpoint input/MDI position setpoint / MDI s_set**

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Integer32	Dyn. index: -	Func. diagram: 3618
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	2690[0]

Description: Sets the signal source for the position setpoint in the mode "direct setpoint input/MDI".
Dependency: Refer to: p2648, p2649, p2650, p2690
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Depending on p2649, the position setpoint is either transferred continuously or edge-triggered.
The position setpoint input is interpreted as length unit [LU].

p2643 **CI: EPOS direct setpoint input/MDI velocity setpoint / MDI v_set**

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Integer32	Dyn. index: -	Func. diagram: 3618
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	2691[0]

Description: Sets the signal source for the velocity setpoint in the "direct setpoint input/MDI mode".
Dependency: Refer to: p2649, p2650, p2691
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Depending on p2649, the velocity setpoint is either transferred continuously or edge-triggered.
The velocity setpoint input is interpreted as [1000 LU/min].

p2644 **CI: EPOS direct setpoint input/MDI acceleration override / MDI a_over**

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 3618
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	2692[0]

Description: Sets the signal source for the acceleration override in the operating mode "direct setpoint input/MDI".
Dependency: Refer to: p2649, p2650, p2692
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: Depending on p2649, the acceleration override is either transferred continuously or edge-triggered.
The signal value 4000 hex (16384 dec) corresponds to 100 %.

p2645 **CI: EPOS direct setpoint input/MDI deceleration override / MDI -a_over**

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 3618
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	2693[0]

Description: Sets the signal source for the deceleration override in the operating mode "direct setpoint input/MDI".
Dependency: Refer to: p2649, p2650, p2693

Notice: If, when calculating the traversing profile, it is identified that the target position with the programmed deceleration override cannot be reached without reversing the direction, then when accepting the dynamic values, the larger deceleration override is accepted and becomes effective.

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Depending on p2649, the deceleration override is either transferred continuously or edge-triggered.
The signal value 4000 hex (16384 dec) corresponds to 100 %.

p2646**CI: EPOS velocity override / v_over**

SERVO (EPOS),
VECTOR (EPOS),
SERVO_AC (EPOS),
VECTOR_AC (EPOS)

Can be changed: T

Calculated: -

Access level: 1

1

Description: Sets the signal source for the velocity override.

This velocity override is effective in the following operating modes "direct setpoint input/MDI", "traversing blocks", "jogging" and "search for reference" (when approaching the reference cam).

Dependency: Refer to: p2571, p2585, p2586, p2605, p2618, p2643, r2681

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The effective override (r2681) can differ from the specified override due to limits (e.g. maximum velocity).

p2647**BI: EPOS direct setpoint input/MDI selection / MDI selection**

SERVO (EPOS),
VECTOR (EPOS),
SERVO_AC (EPOS),
VECTOR_AC (EPOS)

Can be changed: T

Calculated: -

0

Description: Sets the signal source for the positioning type in the mode "direct setpoint input/MDI".

BI: p2648 = 1 signal

Absolute positioning is selected.

BI: p2648 = 0 signal

Relative positioning is selected.

Dependency: Refer to: p2649, p2650, p2654

Refer to: A07461, F07488

Notice: Absolute positioning:

To traverse, the reference point must be set (r2684.11 = 1).

Relative positioning:

To traverse, it is not necessary that the reference point is set.

2 Parameters

2.2 List of parameters

Note: Depending on p2649, the positioning type is either transferred continuously or edge-triggered.
Binector input p2648 is only evaluated when connector input p2654 = 0. If p2654 is a value other than 0, the positioning type is evaluated by means of the set signal source.

p2649	BI: EPOS direct setpoint input/MDI transfer type selection / MDI trans_type sel		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3620
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to define how values are transferred in the operating mode "direct setpoint input/MDI". BI: p2649 = 1 signal Values are continually transferred (refer to parameter under dependency). BI: p2649 = 0 signal The values are transferred for BI: p2650 = 0/1 signal.		
Dependency:	Refer to: p2642, p2643, p2644, p2645, p2648, p2650, p2651, p2652		
Caution:	For BI: p2649 = 1 signal, the following applies: Motion starts without any explicit control signal.		
			
Note:	Parameter p2649 can only be changed when p0922 (p2079) = 999.		

p2650	BI: EPOS direct setpoint input/MDI setpoint acceptance edge / MDI setp_accept		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3620
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to accept the values for edge-triggered selection (BI: p2649 = 0 signal) in the operating mode "direct setpoint input/MDI". BI: p2650 = 0/1 signal and BI: p2649 = 0 signal Values are accepted, edge-triggered (refer to parameter under dependency).		
Dependency:	Refer to: p2640, p2641, p2642, p2643, p2644, p2645, p2648, p2649, p2651, p2652, r2684		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The status signal r2684.12 = 0/1 signal is used for acknowledgment. The operating mode "direct setpoint input/MDI" can be influenced via the following signals: - intermediate stop via BI: p2640. - reject traversing task via BI: p2641.		

p2651	BI: EPOS direct setpoint input/MDI direction selection, positive / MDI dir_sel pos		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3620
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the positive direction selection in the operating mode "direct setpoint input/MDI".		
Dependency:	Refer to: p2576, p2648, p2649, p2650, p2652, p2653, p2654		
Note:	The following applies for "setting-up": - the traversing direction can be entered using this binector input. - if both directions (p2651, p2652) are selected, then the axis remains stationary (zero speed). - if both directions (p2651, p2652) are de-selected, then the axis remains stationary (zero speed).		

The following applies for "positioning":

Using binector inputs p2651 and p2652, when the modulo correction (BI: p2577 = 1 signal) is activated and for absolute positioning (BI: p2648 = 1 signal), the traversing direction is specified as follows:

BI: p2651 / BI: p2652

0 signal / 0 signal: Absolute positioning through the shortest distance.

1 signal / 0 signal: Absolute positioning in the positive direction.

0 signal / 1 signal: Absolute positioning in the negative direction.

1 signal / 1 signal: Absolute positioning through the shortest distance.

p2652 BI: EPOS direct setpoint input/MDI direction selection negative / MDI dir_sel neg

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1

	Min	Max	Factory setting
-	-	0	

Description: Sets the signal source for the negative direction selection in the operating mode "direct setpoint input/MDI".

Dependency: Refer to: p2576, p2648, p2649, p2650, p2651, p2653, p2654

Note: The following applies for "setting-up":

- the traversing direction can be entered using this binector input.

- if both directions (p2651, p2652) are selected, then the axis remains stationary (zero speed).

- if both directions (p2651, p2652) are de-selected, then the axis remains stationary (zero speed).

The following applies for "positioning":

Using binector inputs p2651 and p2652, when the modulo correction (BI: p2577 = 1 signal) is activated and for absolute positioning (BI: p2648 = 1 signal), the traversing direction is specified as follows:

BI: p2651 / BI: p2652

0 signal / 0 signal: Absolute positioning through the shortest distance.

1 signal / 0 signal: Absolute positioning in the positive direction.

0 signal / 1 signal: Absolute positioning in the negative direction.

1 signal / 1 signal: Absolute positioning through the shortest distance.

p2653 BI: EPOS direct setpoint input/MDI setting-up selection / MDI setting-up sel

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3620
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
-	-	0	

Description: Sets the signal source for setting-up in the operating mode "direct setpoint input/MDI".

BI: p2653 = 1 signal

Setting-up selected.

BI: p2653 = 0 signal

Positioning selected.

Dependency: Refer to: p2651, p2652

Note: In the operating mode "direct setpoint input/MDI", it is possible to make a flying changeover between setting-up and positioning.

For "setup" (BI: p2653 = 1 signal), the following applies:

A traversing direction must be selected via binector inputs p2651 and p2652.

2 Parameters

2.2 List of parameters

p2654	CI: EPOS direct setpoint input/MDI mode adaptation / MDI mode adapt		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Integer16 P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3620 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to interconnect the MDI mode to the operating mode "direct setpoint input MDI" via PROFIBUS telegram 110. CI: p2654 = 0 The binector inputs listed below are evaluated. CI: p2654 > 0 The following binector inputs are not evaluated: - BI: p2648 (positioning type) - BI: p2651 (direction selection, positive) - BI: p2652 (direction selection, negative) In this case, the following definitions apply: Signal via CI: p2654 = xx0x hex -> absolute Signal via CI: p2654 = xx1x hex -> relative Signal via CI: p2654 = xx2x hex -> abs_pos (only for modulo correction) Signal via CI: p2654 = xx3x hex -> abs_neg (only for modulo correction)		
Dependency:	Refer to: p2648, p2651, p2652		
<hr/>			
p2655[0...1]	BI: EPOS select tracking mode / Sel tracking mode		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting [0] 1 [1] 2526.7
Description:	Sets the signal source to select tracking mode. BI: p2655[0] or BI: p2655[1] = 1 signal Tracking mode after withdrawing the enable signal from EPOS (BI: p2656 = 0 signal). BI: p2655[0] and BI: p2655[1] = 0 signal No tracking mode after withdrawing the enable signal from EPOS (BI: p2656 = 0 signal).		
Dependency:	Refer to: p2656		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	For the following events, independent of the signal that is present, tracking mode is selected: - after booting. - after a 0/1 signal at BI: p2658 (EPOS position actual value, valid feedback signal). - while a fault is present.		

p2656	BI: EPOS enable basic positioner / EPOS enable		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3635
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	2526.3
Description:	Sets the signal source to enable the basic positioner. BI: p2656 = 1 signal The basic positioner is enabled. BI: p2656 = 0 signal The basic positioner is not enabled.		
Dependency:	Refer to: r2526, p2655		
p2657	CI: EPOS position actual value/position setting value / Pos act/set value		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Integer32	Dyn. index: -	Func. diagram: 3610, 3616, 3620, 3635
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	2521[0]
Description:	Sets the signal source for the position actual value/position setting value.		
Dependency:	Refer to: r2521, p2658		
Note:	In the tracking mode, the position setpoint is taken from this connector input.		
p2658	BI: EPOS pos. actual value valid feedback signal / Pos valid feedback		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3635
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	2526.0
Description:	Sets the signal source for the feedback signal "position actual value is valid". BI: p2658 = 1 signal The position actual value received via CI: p2657 is valid. BI: p2658 = 0 signal The position actual value received via CI: p2657 is invalid.		
Dependency:	Refer to: r2526, p2657		
Note:	While a 0 signal is present, the position setpoint (p2665) is held at the value of 0.		

2 Parameters

2.2 List of parameters

p2659	BI: EPOS referencing active feedback signal / Ref act fdbk		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min - Max -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 3612 Unit selection: - Expert list: 1 Factory setting 2526.1
Description:	Sets the signal source for the feedback signal "referencing active". BI: p2659 = 1 signal Referencing is active. BI: p2659 = 0 signal Referencing is not active.		
Dependency:	Refer to: r2526		
<hr/>			
p2660	CI: EPOS measured value referencing / Meas val ref		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Integer32 P-Group: Basic positioner Not for motor type: - Min - Max -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 3612, 3614 Unit selection: - Expert list: 1 Factory setting 2523[0]
Description:	Sets the signal source for the measured value for the function "referencing".		
Dependency:	Refer to: r2523		
<hr/>			
p2661	BI: EPOS measured value valid feedback signal / MeasVal valid fdbk		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min - Max -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 3612, 3614, 3615 Unit selection: - Expert list: 1 Factory setting 2526.2
Description:	Sets the signal source for the feedback signal "measured value valid". BI: p2661 = 1 signal The measured value received via CI: p2660 is valid. BI: p2661 = 0 signal The measured value received via CI: p2660 is invalid.		
Dependency:	Refer to: r2526, p2660		
<hr/>			
p2662	BI: EPOS adjustment value valid feedback signal / Adj val valid FS		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min - Max -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2526.9
Description:	Sets the signal source for the feedback signal "adjustment value valid". BI: p2662 = 1 signal The adjustment value received via CI: p2660 is valid. BI: p2662 = 0 signal The adjustment value received via CI: p2660 is not valid.		
Dependency:	Refer to: r2526, p2660		

p2663	BI: EPOS clamping active feedback signal / Clamping active FS		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting 2526.8
Description:	Sets the signal source for the feedback signal "clamping active for travel to fixed stop". BI: p2663 = 1 signal Clamping is active BI: p2663 = 0 signal Clamping is not active.		
Dependency:	Refer to: r2526		
Note:	The feedback signal from "terminals active" is, for the factory setting, dependent on the signal BO: r2526.8 (terminals active when moving to a fixed stop).		
r2665	CO: EPOS position setpoint / s_set		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: - Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min - [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Displays the actual absolute position setpoint.		
Dependency:	Refer to: p2530		
Note:	As standard, the following BICO interconnection is established: CI: p2530 = r2665		
r2666	CO: EPOS velocity setpoint / v_set		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: - Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min - [1000 LU/min]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [1000 LU/min]	Access level: 1 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting - [1000 LU/min]
Description:	Displays the actual velocity setpoint.		
Dependency:	Refer to: p2531		
Note:	As standard, the following BICO interconnection is established: CI: p2531 = r2666		
r2667	CO: EPOS backlash compensation value / Backlash value		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: - Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min - [LU]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Displays the actual effective value for backlash compensation.		
Dependency:	Refer to: p2516		
Note:	As standard, the following BICO interconnection is established: CI: p2516 = r2667		

2 Parameters

2.2 List of parameters

r2669	CO: EPOS actual operating mode / Op mode act		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: -	Func. diagram: 3625, 3630
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the actual active operating mode.
 Value = 00 hex -> no operating mode active
 Value = 01 hex -> jogging active
 Value = 02 hex -> search for reference active
 Value = 04 hex -> traversing blocks active
 Value = 08 hex -> Positioning for direct setpoint input/MDI active
 Value = 10 hex -> Setting-up for direct setpoint input/MDI active
 Value = 20 hex -> flying referencing active

Dependency: Refer to: p2589, p2590, p2595, p2631, p2647, p2653

r2670.0...15	CO/BO: EPOS status word active traversing block / ZSW act trav_block		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 3615, 3625, 3650
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status word for the active traversing block.
 r2670.0: Active traversing block, bit 0
 ...
 r2670.5: Active traversing block, bit 5
 r2670.15: MDI active

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Active traversing block bit 0	Active	Not active	-
	01	Active traversing block bit 1	Active	Not active	-
	02	Active traversing block bit 2	Active	Not active	-
	03	Active traversing block bit 3	Active	Not active	-
	04	Active traversing block bit 4	Active	Not active	-
	05	Active traversing block bit 5	Active	Not active	-
	15	MDI active	Active	Not active	-

Dependency: Refer to: p2631, p2647

Note: For bit 00 ... 05:
 Displays the active traversing block in the traversing blocks operating mode.
 For bit 15:
 For a 1 signal, the operating mode - direct setpoint input/MDI - is active

r2671	CO: EPOS actual position setpoint / s_set act		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: -	Func. diagram: 3610, 3616, 3620
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [LU]	- [LU]	- [LU]

Description: Displays the position setpoint presently being processed.

Note: A position of 0 is displayed for non position-related tasks (e.g. ENDLESS_POS, ENDLESS_NEG).

r2672	CO: EPOS actual velocity setpoint / v_set act		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: -	Func. diagram: 3610, 3612, 3616, 3620
	P-Group: Basic positioner	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [1000 LU/min]	- [1000 LU/min]	- [1000 LU/min]
Description:	Displays the velocity setpoint presently being processed.		

r2673	CO: EPOS actual acceleration override / a_over act		
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: -	Calculated: -	Access level: 1

	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	- [%]	- [%]	- [%]		
Description:	Displays the actual effective velocity override.				
Dependency:	Refer to: p2571, p2646				
Note:	The effective override can differ from the specified override due to limits (e.g. p2571, maximum velocity).				
r2682	CO: EPOS residual distance to go / Residual distance				
SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	Can be changed: -	Calculated: -	Access level: 1		
	Data type: Integer32	Dyn. index: -	Func. diagram: 3635		
	P-Group: Basic positioner	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	- [LU]	- [LU]	- [LU]		
Description:	Displays the current residual distance.				
	The remaining distance is the distance to still to be moved through up to the end of the actual positioning task.				
Dependency:	Refer to: r2665, r2671, r2678				
r2683.0...14	CO/BO: EPOS status word 1 / POS_ZSW1				
SERVO (Lin, Position control), SERVO_AC (Lin, Position control)	Can be changed: -	Calculated: -	Access level: 1		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 3645		
	P-Group: Closed loop position control	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays status word 1 for the basic positioner (EPOS).				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Tracking mode active	Yes	No	3635, 4020
	01	Velocity limiting active	Yes	No	3630
	02	Setpoint fixed	Yes	No	3635
	03	Set position reached	Yes	No	3635
	04	Axis moves forward	Yes	No	3635
	05	Axis moves backward	Yes	No	3635
	06	Software limit switch minus reached	Yes	No	3635
	07	Software limit switch plus reached	Yes	No	3635
	08	Position actual value <= cam switching position 1	Yes	No	4025
	09	Position actual value <= cam switching position 2	Yes	No	4025
	10	Direct output 1 via traversing block	Yes	No	3616
	11	Direct output 2 via traversing block	Yes	No	3616
	12	Fixed stop reached	Yes	No	3616, 3617
	13	Fixed stop clamping force reached	Yes	No	3616, 3617
	14	Travel to fixed stop active	Yes	No	3616, 3617
Dependency:	Refer to: r2684				

2 Parameters

2.2 List of parameters

Note: For bit 02, 04, 05, 06, 07:
This signals designate the state after jerk limiting.
For bit 08, 09:
These signals are generated in the "closed-loop position control" function module.

r2683.0...14		CO/BO: EPOS status word 1 / POS_ZSW1			
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: Unsigned16 P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3645 Unit selection: - Expert list: 1 Factory setting -		
Description:	Displays status word 1 for the basic positioner (EPOS).				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Tracking mode active	Yes	No	3635, 4020
	01	Velocity limiting active	Yes	No	3630
	02	Setpoint fixed	Yes	No	3635

	07	Software limit switch plus reached	Yes	No	3635
	08	Position actual value <= cam switching position 1	Yes	No	4025
	09	Position actual value <= cam switching position 2	Yes	No	4025
	10	Direct output 1 via traversing block	Yes	No	3616
	11	Direct output 2 via traversing block	Yes	No	3616
	12	Fixed stop reached	Yes	No	3616, 3617
	13	Fixed stop clamping torque reached	Yes	No	3616, 3617
	14	Travel to fixed stop active	Yes	No	3616, 3617

Dependency: Refer to: r2684

Note: For bit 02, 04, 05, 06, 07:
This signals designate the state after jerk limiting.
For bit 08, 09:
These signals are generated in the "closed-loop position control" function module.

r2684.0...15		CO/BO: EPOS status word 2 / POS_ZSW2			
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: - Data type: Unsigned16 P-Group: Closed loop position control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 3646 Unit selection: - Expert list: 1 Factory setting -		
Description:	Displays status word 2 for the basic positioner (EPOS).				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Search for reference active	Active	Not active	3612
	01	Flying referencing active	Active	Not active	3614
	02	Referencing active	Active	Not active	-
	03	Printing mark outside outer window	Yes	No	3614
	04	Axis accelerating	Yes	No	3635
	05	Axis decelerating	Yes	No	3635
	06	Jerk limiting active	Yes	No	3635
	07	Activate correction	Yes	No	3635

08	Following error in tolerance	Yes	No	4025
09	Modulo correction active	Yes	No	-
10	Target position reached	Yes	No	4020
11	Reference point set	Yes	No	3612, 3614, 3630
12	Acknowledgment traversing block activated	Yes	No	3616, 3620
13	STOP cam minus active	Yes	No	3630
14	STOP cam plus active	Yes	No	3630
15	Traversing command active	Yes	No	3635

Note:

For bit 02:

The "referencing active" signal is an OR logic operation of "search for reference active" and "flying referencing active".

For bit 00 ... 07 and 11 ... 14:

These signals are generated in the function module "basic positioner".

For bit 08:

The signal is generated in the "closed-loop position control" function module.

Description:	Display and connector output for the reference quantity for speed and frequency (p2000). All speeds or frequencies specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word). This parameter has the unit rpm. The following applies: Reference frequency (in Hz) = reference speed (in rpm) / 60			
Dependency:	Refer to: p2000			

Note: This BICO parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.

r2700	CO: Reference velocity/reference frequency actual / v_ref/f_ref act		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 2

	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Display and connector output for the actual reference quantity for velocity and frequency.
All velocities or frequencies specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
The following applies:
Reference frequency (in Hz) = reference velocity (in m/min) / 60

Dependency: Refer to: p2000

Note: This parameter represents the numerical value of the reference quantity in the currently selected units and is only available for interconnection with Drive Control Chart (DCC).
If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example 1:

The signal of an analog input (e.g. r4055[0]) is connected to a velocity setpoint (e.g. p1070[0]). The actual percentage input value is cyclically converted into the absolute velocity setpoint using the reference velocity (p2000).

Example 2:

The setpoint from PROFIBUS (r2050[1]) is connected to a velocity setpoint (e.g. p1070[0]). The actual input value is cyclically converted into a percentage value via the pre-specified scaling 4000 hex. This percentage value is converted to the absolute velocity setpoint via reference velocity (p2000).

r2700	CO: Reference frequency / f_ref

Dependency:	Refer to: p2005		
Note:	This BICO parameter provides the numerical value of the reference quantity p2005 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC. This BICO parameter is not suitable for interconnecting for cyclic communication.		
r2706	CO: Reference temp / Reference temp		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM120, TM150	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Connector output of the reference quantity for temperatures. All temperatures specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word). This parameter has the unit degree Celsius.		
Note:	This BICO parameter provides the numerical value of the reference quantity for the temperature as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC. This BICO parameter is not suitable for interconnecting for cyclic communication.		
r2707	CO: Reference acceleration / Ref accel		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Connector output of the reference quantity for accelerations p2007. All acceleration rates specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word). The unit of this parameter is the same as the unit selected for p2007.		
Dependency:	r0108.12, p0505 Refer to: p2007		
Note:	This BICO parameter provides the numerical value of the reference quantity p2007 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value in the currently selected unit can be adopted unchanged from this connector output in DCC. This BICO parameter is not suitable for interconnecting for cyclic communication.		

p2720[0...n]		Load gear configuration / Load gear config			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(1, 4)	Calculated: -	Access level: 1		
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the configuration for position tracking of a load gear.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Load gear activate position tracking	Yes	No	-
	01	Axis type	Linear axis	Rotary axis	-
	02	Load gear reset position	Yes	No	-
Note:	For the following events, the non-volatile, saved position values are automatically reset:				
	- when an encoder replacement has been identified.				
	- when changing the configuration of the Encoder Data Set (EDS).				
	- when adjusting the absolute encoder again				

p2721[0...n]		Load gear rotary absolute encoder revolutions virtual / Abs rot rev		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(1, 4)	Calculated: -	Access level: 1	
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Encoder	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	4194303	0	
Description:	Sets the number of rotations that can be resolved for a rotary absolute encoder with activated position tracking of the load gear.			
Dependency:	This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking of the load gear (p2720.0 = 1).			
Note:	The resolution that is set must be able to be represented using r2723.			
	For rotary axes/modulo axes, the following applies:			
	This parameter is pre-set with p0421 when activating position tracking and can be changed.			
	For linear axes, the following applies:			
	This parameter is pre-assigned with p0421 when activating position tracking, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed.			

p2722[0...n]		Load gear position tracking tolerance window / Pos track tol		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(1, 4)	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Encoder	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00	4294967300.00	0.00	
Description:	Sets a tolerance window for position tracking.			
	After the system is switched on, the difference between the saved position and the actual position is determined, and depending on this, the following is initiated:			
	Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value.			
	Difference outside the tolerance window --> An appropriate message is output.			
Dependency:	Refer to: F07449			
Caution:	Rotation, e.g. through a complete encoder range is not detected.			

Note: The value is entered in integer (complete) encoder pulses.
 For p2720.0 = 1, the value is automatically pre-assigned quarter of the encoder range.
 Example:
 Quarter of the encoder range = (p0408 * p0421) / 4
 It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).

r2723[0...n]	CO: Load gear absolute value / Load gear abs_val		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: 4010, 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the absolute value after the load gear.		
Notice:	The encoder position actual value must be requested using the encoder control word Gn_STW.13.		
Note:	The increments are displayed in the format the same as r0483.		

r2724[0...n]	CO: Load gear position difference / Load gear pos diff		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the position difference before the load gear between switching off and switching on.		
Note:	The increments are displayed in the same format as for r0483/r2723. If the measuring gear of the motor encoder is not activated, the position difference should be read in encoder increments. If the measuring gear of the motor encoder is activated, the position difference is converted using the measuring gear factor.		

p2730[0...3]	BI: LR pos. actual value preprocessing activate neg. corr. (edge) / ActV_prep neg corr		
SERVO (Position control), VECTOR (Position control), SERVO_AC (Position control), VECTOR_AC (Position control)	Can be changed: T	Calculated: -	Access level: 1

	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [Arms]	5000.000 [Arms]	0.000 [Arms]
Description:	Magnetizing current for an induction motor determined by the motor data identification. This magnetizing current can be changed after the identification and accepted in p0320 with p1910/p1960 = -3.		
Dependency:	Refer to: p0320, r0331, p1910, r1948, p1960		

2 Parameters

2.2 List of parameters

p3027	Motld optimum load angle identified / phi_load opt ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: ASM, SESM, REL Min 0.0 [°]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 135.0 [°]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [°]
Description:	Optimum load angle for a synchronous motor determined by the motor data identification. This optimum load angle can be changed after the identification and accepted in p0327 with p1910/p1960 = -3.		
Dependency:	Refer to: p0327, r1947, p1960		
p3028	Motld reluctance torque constant identified / kT_reluct ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: ASM, SESM, REL Min -1000.00 [mH]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 1000.00 [mH]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [mH]
Description:	Reluctance torque constant for a synchronous motor determined by the motor data identification. This reluctance torque constant can be changed after the identification and accepted in p0328 with p1910/p1960 = -3.		
Dependency:	Refer to: p0328, r1939, p1960		
p3028	Motld reluctance force constant identified / kT_reluct ident		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: ASM, SESM, REL Min -1000.00 [mH]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 1000.00 [mH]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [mH]
Description:	Reluctance force constant for a synchronous motor determined by the motor data identification. This reluctance force constant can be changed after the identification and accepted in p0328 with p1910/p1960 = -3.		
Dependency:	Refer to: p0328, r1939, p1960		
p3030	Chld factor plane adaptation positive / Chld pi_adap pos		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 10.00 [%]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 200.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the factor for the plane compensation in the positive direction from the characteristic identification. This value corresponds to p1830 of the drive data set selected for the identification.		
Dependency:	Refer to: p1830		

p3030		Motld angular commutation offset identified / Ang_com offset		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Motor identification	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-180.00 [°]	180.00 [°]	0.00 [°]	
Description:	Angular commutation offset for a synchronous motor determined by the motor data identification. This angular commutation offset can be changed after the identification and accepted in p0431 with p1910/p1960 = -3.			
Dependency:	Refer to: p0431, p1910, p1960, r1984			

p3031		Chld factor plane adaptation negative / Chld pl_adap neg		
HLA	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Motor identification	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	10 [%]	200 [%]	100 [%]	
Description:	Sets the factor for the plane compensation in the negative direction from the characteristic identification. This value corresponds to p1831 of the drive data set selected for the identification.			
Dependency:	Refer to: p1831			

p3031		Motld encoder inversion actual value identified / EnclnvActVal ident			
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Motor identification	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Inversion of the encoder actual value determined by the motor data identification. This inversion can be changed after the identification and accepted in p0410 with p1910/p1960 = -3.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Invert speed actual value	Yes	No	4710, 4711, 4715 4704
	01	Invert position actual value	Yes	No	
Dependency:	Refer to: p0410, p1910, p1960				

p3031		Motld encoder inversion actual value identified / EnclnvActVal ident			
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Motor identification	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Inversion of the encoder actual value determined by the motor data identification. This inversion can be changed after the identification and accepted in p0410 with p1910/p1960 = -3.				

2 Parameters

2.2 List of parameters

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Invert velocity actual value	Yes	No	4710, 4711, 4715
	01	Invert position actual value	Yes	No	4704
Dependency:	Refer to: p0410, p1910, p1960				

p3033		Chld transition point compensation Q1 positive zero range / Chld tr pt Q1 pos			
HLA	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -		
	P-Group: Motor identification	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0.01 [%]	95.00 [%]	0.01 [%]		
Description:	Displays the flow rate Q for point 1 positive (zero range) of the transition point compensation from the characteristic identification. This value corresponds to p1833 of the drive data set selected for the identification.				
Dependency:	Refer to: r1833, p1833				

p3034		ChID transition point compensation U1 positive zero range / Chld tr pt U1 pos			
HLA	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -		
	P-Group: Motor identification	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0.00 [%]	95.00 [%]	0.00 [%]		
Description:	Displays the voltage U for point 1 positive (zero range) of the transition point compensation from the characteristic identification. This value corresponds to p1834 of the drive data set selected for the identification.				
Dependency:	Refer to: p1834				

p3035		ChID transition point compensation rounding 1 pos. zero range / Chld TrPtRnd 1 pos			
HLA	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -		
	P-Group: Motor identification	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0.00 [%]	30.00 [%]	0.00 [%]		
Description:	Displays the rounding for point 1 positive (zero range) of the transition point compensation from the characteristic identification. This value corresponds to p1835 of the drive data set selected for the identification.				
Dependency:	Refer to: p1835				

p3036		Chld transition point compensation Q1 negative zero range / Chld tr pt Q1 neg			
HLA	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -		
	P-Group: Motor identification	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0.01 [%]	95.00 [%]	0.01 [%]		
Description:	Displays the flow rate Q for point 1 negative (zero range) of the transition point compensation from the characteristic identification. This value corresponds to p1836 of the drive data set selected for the identification.				
Dependency:	Refer to: r1836, p1836				

p3037	Chld transition point compensation U1 negative zero range / Chld tr pt U1 neg		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	95.00 [%]	0.00 [%]
Description:	Displays the voltage U for point 1 negative (zero range) of the transition point compensation from the characteristic identification. This value corresponds to p1837 of the drive data set selected for the identification.		
Dependency:	Refer to: r1837, p1837		
p3038	Chld transition point compensation rounding 1 neg. zero range / Chld TrPtRnd 1 neg		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	30.00 [%]	0.00 [%]
Description:	Displays the rounding for point 1 negative (zero range) of the transition point compensation from the characteristic identification. This value corresponds to p1838 of the drive data set selected for the identification.		
Dependency:	Refer to: p1838		
p3039	Chld transition point compensation Q2 positive / Chld tr pt Q2 pos		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.02 [%]	95.00 [%]	10.00 [%]
Description:	Displays the flow rate Q for point 2 positive of the transition point compensation from the characteristic identification. This value corresponds to p1839 of the drive data set selected for the identification.		
Dependency:	Refer to: p1839		
p3040	Chld transition point compensation U2 positive / Chld tr pt U2 pos		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	95.00 [%]	10.00 [%]
Description:	Displays the voltage U for point 2 positive of the transition point compensation from the characteristic identification. This value corresponds to p1840 of the drive data set selected for the identification.		
Dependency:	Refer to: p1840		

p3041	Chld transition point compensation rounding 2 positive / Chld TrPtRnd 2 pos		
HLA	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	30.00 [%]	0.00 [%]
Description:	Displays the rounding for point 2 positive of the transition point compensation from the characteristic identification. This value corresponds to p1841 of the drive data set selected for the identification.		
Dependency:	Refer to: r1841, p1841		
p3041	Motld moment of inertia identified / M_inertia ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: 25_1	Unit selection: p0100
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000000 [kgm ²]	100000.000000 [kgm ²]	0.000000 [kgm ²]
Description:	Motor moment of inertia determined by the motor data identification. This motor moment of inertia can be changed after the identification and accepted in p0341 with p1910/p1960 = -3.		
Dependency:	Refer to: p0341, p1960, r1969		
p3041	Motld motor mass identified / Mot mass ident		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: 27_1	Unit selection: p0100
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000000 [kg]	10000.000000 [kg]	0.000000 [kg]
Description:	Mass of the motor determined by the motor data identification. This mass can be changed after the identification and accepted in p0341 with p1910/p1960 = -3.		
Dependency:	Refer to: p0341, p1960, r1969		
p3042	Chld transition point compensation Q2 negative / Chld tr pt Q2 neg		
HLA	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	95.00 [%]	0.00 [%]
Description:	Displays the flow rate Q for point 2 negative of the transition point compensation from the characteristic identification. This value corresponds to p1842 of the drive data set selected for the identification.		
Dependency:	Refer to: p1842		

p3042	Motld load moment of inertia identified / Load mom ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.00000 [kgm ²]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: 25_1 Scaling: - Max 100000.00000 [kgm ²]	Access level: 3 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting 0.00000 [kgm ²]
Description:	Load moment of inertia determined by the motor data identification. This load moment of inertia can be changed after the identification and accepted in p1498 with p1910/p1960 = -3.		
Dependency:	Refer to: p0342, p1498, p1960, r1969		
Note:	For p1910/p1960 = -3, p0342 is set to 1 (ratio between the total and motor).		
p3042	Motld load mass identified / Load mass ident		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.00000 [kg]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: 27_1 Scaling: - Max 10000.00000 [kg]	Access level: 3 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting 0.00000 [kg]
Description:	Load mass determined by the motor data identification. This load mass can be changed after the identification and accepted in p1498 with p1910/p1960 = -3.		
Dependency:	Refer to: p0342, p1498, p1960, r1969		
Note:	For p1910/p1960 = -3, p0342 is set to 1 (ratio between the total and motor).		
p3043	Chld transition point compensation U2 negative / Chld tr pt U2 neg		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 95.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	Displays the voltage U for point 2 negative of the transition point compensation from the characteristic identification. This value corresponds to p1843 of the drive data set selected for the identification.		
Dependency:	Refer to: p1843		
p3044	Chld transition point compensation rounding 2 negative / Chld TrPtRnd 2 neg		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 30.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	Displays the rounding for point 2 negative of the transition point compensation from the characteristic identification. This value corresponds to p1844 of the drive data set selected for the identification.		
Dependency:	Refer to: p1844		

2 Parameters

2.2 List of parameters

p3045	Chld transition point compensation Q3 positive saturation / Chld TrPt Q3 pos S		
HLA	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.20 [%]	100.00 [%]	100.00 [%]
Description:	Displays the flow rate Q for point 3 positive (saturation) of the transition point compensation from the characteristic identification. This value corresponds to p1845 of the drive data set selected for the identification.		
Dependency:	Refer to: p1845		
p3045	Motld force characteristic kT1 identified / kT1 ident		
SERVO (Ext M_ctrl, Lin), SERVO_AC (Ext M_ctrl, Lin), SERVO_I_AC (Ext M_ctrl, Lin)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-340.28235E36 [N/Arms]	340.28235E36 [N/Arms]	0.00 [N/Arms]
Description:	Coefficient kT1 for the force characteristic for a synchronous linear motor determined by the motor data identification. This coefficient can be changed after the identification and accepted in p0645 with p1910/p1960 = -3.		
Dependency:	Refer to: p0645, p0646, p0647, p0648, p1960, p3046, p3047, p3048		
p3045	Motld torque characteristic kT1 identified / kT1 ident		
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-340.28235E36 [Nm/A]	340.28235E36 [Nm/A]	0.00 [Nm/A]
Description:	Coefficient kT1 for the torque characteristic for a synchronous motor determined by the motor data identification. This coefficient can be changed after the identification and accepted in p0645 with p1910/p1960 = -3.		
Dependency:	Refer to: p0645, p0646, p0647, p0648, p1960, p3046, p3047, p3048		
p3046	Chld transition point compensation U3 positive saturation / Chld TrPt U3 pos S		
HLA	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.20 [%]	100.00 [%]	100.00 [%]
Description:	Displays the voltage U for point 3 positive (saturation) of the transition point compensation from the characteristic identification. This value corresponds to p1846 of the drive data set selected for the identification.		
Dependency:	Refer to: p1846		

p3046	Motld force characteristic kT3 identified / kT3 ident			
SERVO (Ext M_ctrl, Lin), SERVO_AC (Ext M_ctrl, Lin), SERVO_I_AC (Ext M_ctrl, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: ASM, SESM, REL Min -	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Coefficient kT3 for the force characteristic for a synchronous linear motor determined by the motor data identification. This coefficient can be changed after the identification and accepted in p0646 with p1910/p1960 = -3.			
Dependency:	Refer to: p0645, p0646, p0647, p0648, p1960, p3045, p3047, p3048			
p3046	Motld torque characteristic kT3 identified / kT3 ident			
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: ASM, SESM, REL Min -	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Coefficient kT3 for the torque characteristic for a synchronous motor determined by the motor data identification. This coefficient can be changed after the identification and accepted in p0646 with p1910/p1960 = -3.			
Dependency:	Refer to: p0645, p0646, p0647, p0648, p1960, p3045, p3047, p3048			
p3047	Chld transition point compensation Q3 negative saturation / Chld TrPt Q3 neg S			
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.20 [%]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 100.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [%]	
Description:	Displays the flow rate Q for point 3 negative (saturation) of the transition point compensation from the characteristic identification. This value corresponds to p1845 of the drive data set selected for the identification.			
Dependency:	Refer to: p1847			
p3047	Motld force characteristic kT5 identified / kT5 ident			
SERVO (Ext M_ctrl, Lin), SERVO_AC (Ext M_ctrl, Lin), SERVO_I_AC (Ext M_ctrl, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: ASM, SESM, REL Min -	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Coefficient kT5 for the force characteristic for a synchronous linear motor determined by the motor data identification. This coefficient can be changed after the identification and accepted in p0647 with p1910/p1960 = -3.			
Dependency:	Refer to: p0645, p0646, p0647, p0648, p1960, p3045, p3046, p3048			

2 Parameters

2.2 List of parameters

p3047	Motld torque characteristic kT5 identified / kT5 ident		
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: ASM, SESM, REL Min -	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Coefficient kT5 for the torque characteristic for a synchronous motor determined by the motor data identification. This coefficient can be changed after the identification and accepted in p0647 with p1910/p1960 = -3.		
Dependency:	Refer to: p0645, p0646, p0647, p0648, p1960, p3045, p3046, p3048		
p3048	Chld transition point compensation U3 negative saturation / Chld TrPt U3 neg S		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.20 [%]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 100.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Displays the voltage U for point 3 negative (saturation) of the transition point compensation from the characteristic identification. This value corresponds to p1848 of the drive data set selected for the identification.		
Dependency:	Refer to: r1848, p1848		
p3048	Motld force characteristic kT7 identified / kT7 ident		
SERVO (Ext M_ctrl, Lin), SERVO_AC (Ext M_ctrl, Lin), SERVO_I_AC (Ext M_ctrl, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: ASM, SESM, REL Min -	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Coefficient kT7 for the force characteristic for a synchronous linear motor determined by the motor data identification. This coefficient can be changed after the identification and accepted in p0648 with p1910/p1960 = -3.		
Dependency:	Refer to: p0645, p0646, p0647, p0648, p1960, p3045, p3046, p3047		
p3048	Motld torque characteristic kT7 identified / kT7 ident		
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: ASM, SESM, REL Min -	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Coefficient kT7 for the torque characteristic for a synchronous motor determined by the motor data identification. This coefficient can be changed after the identification and accepted in p0648 with p1910/p1960 = -3.		
Dependency:	Refer to: p0645, p0646, p0647, p0648, p1960, p3045, p3046, p3047		

p3049[0...n]	MotId Speed at start of field weakening identified / ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -

	Min	Max	Factory setting
	0.00000 [rpm]	210000.00000 [rpm]	0.00000 [rpm]
Description:	Speed at the start of field weakening determined by the motor data identification. This start speed can be changed after the identification and accepted in p0348 with p1910/p1960 = -3.		
Dependency:	Refer to: p0348, p1910, p1960		
p3049[0...n]	MotId Speed at start of field weakening identified / v_Fieldweak ident		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [m/min]	1300.00000 [m/min]	0.00000 [m/min]
Description:	Velocity at the start of field weakening determined by the motor data identification. This start velocity can be changed after the identification and accepted in p0348 with p1910/p1960 = -3.		
Dependency:	Refer to: p0348, p1910, p1960		
p3050[0...n]	MotorId stator resistance identified / R_stator ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor identification	Unit group: 16_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	2000.00000 [ohm]	0.00000 [ohm]
Description:	Stator resistance determined by the motor data identification. This stator resistance can be changed after the identification and accepted in p0350 with p1910/p1960 = -3.		
Dependency:	Refer to: p0350, p1910, r1912		
p3054[0...n]	MotId rotor resistance identified / R_rotor ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor identification	Unit group: 16_1	Unit selection: p0349
	Not for motor type: PMSM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	300.00000 [ohm]	0.00000 [ohm]
Description:	Rotor resistance for an induction motor determined by the motor data identification. This stator resistance can be changed after the identification and accepted in p0354 with p1910/p1960 = -3.		
Dependency:	Refer to: p0354, p0625, p1910, r1927, p1960		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		

2 Parameters

2.2 List of parameters

p3056[0...n]	Motld stator leakage inductance identified / L_stator leak		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.00000 [mH]	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: 15_1 Scaling: - Max 1000.00000 [mH]	Access level: 3 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting 0.00000 [mH]
Description:	Stator leakage inductance determined by the motor data identification.		
Dependency:	This stator leakage inductance can be changed after the identification and accepted in p3056 with p1910/p1960 = -3. Refer to: p0356, p1910, r1932		
p3058[0...n]	Motld rotor leakage inductance identified / L_rotor leak		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: PMSM, REL Min 0.00000 [mH]	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: 15_1 Scaling: - Max 1000.00000 [mH]	Access level: 3 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting 0.00000 [mH]
Description:	Rotor leakage induction for an induction motor determined by the motor data identification.		
Dependency:	This rotor leakage inductance can be changed after the identification and accepted in p3058 with p1910/p1960 = -3. Refer to: p0358, p1910, r1932		
p3060[0...n]	Motld magnetizing inductance identified / Motld Lh ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: PMSM, REL Min 0.00000 [mH]	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: 15_1 Scaling: - Max 10000.00000 [mH]	Access level: 3 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting 0.00000 [mH]
Description:	Magnetizing inductance for an induction motor determined by the motor data identification.		
Dependency:	This magnetizing inductance can be changed after the identification and accepted in p3060 with p1910/p1960 = -3. Refer to: p0360, p1910, r1936, p1960		
p3070	Motld voltage emulation error final value identified / U_err final ident		
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.000 [V]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 100.000 [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [V]
Description:	Final value of the voltage emulation error determined by the motor data identification.		
Dependency:	This final value can be changed after the identification and accepted in p1952 with p1910/p1960 = -3. Refer to: p1910, p1952, p1953, p3071		

p3071	Motld voltage emulation error current offset identified / U_error I_offset		
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.000 [A]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 100.000 [A]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [A]
Description:	Current offset of the voltage emulation error determined by the motor data identification. This current offset can be changed after the identification and accepted in p1953 with p1910/p1960 = -3.		
Dependency:	Refer to: p1910, p1952, p1953, p3070		
p3075	Chld velocity controller loop gain / Chld v loop_gain		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.0 [mm/Vmin]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 20000.0 [mm/Vmin]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [mm/Vmin]
Description:	Sets the loop gain of the velocity controller from the characteristic identification. This value corresponds to r1475 of the data set selected for the identification.		
Dependency:	Refer to: p1475		
p3080	Motld flux controller P gain identified / Flux ctrl Kp ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: PMSM, REL Min 0.0 [A/Vs]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 999999.0 [A/Vs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [A/Vs]
Description:	P gain of the flux controller for an induction motor determined by the motor data identification. This P gain can be changed after the identification and accepted in p1590 with p1910/p1960 = -3.		
Dependency:	Refer to: p1590, p1910		
p3081	Motld flux controller integral time identified / Flux ctrl Tn ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: PMSM, REL Min 0 [ms]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 10000 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Integral time of the flux controller for an induction motor determined by the motor data identification. This integral time can be changed after the identification and accepted in p1592 with p1910/p1960 = -3.		
Dependency:	Refer to: p1592, p1910		

2 Parameters

2.2 List of parameters

p3082	Motld current controller P gain identified / I_ctrl Kp ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: REL Min 0.000 [V/A]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: 18_1 Scaling: - Max 100000.000 [V/A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 0.000 [V/A]
Description:	P gain of the current controller determined by the motor data identification. This P gain can be changed after the identification and accepted in p1715 with p1910/p1960 = -3.		
Dependency:	Refer to: p1715, p1910		
<hr/>			
p3083	Chld maximum positive velocity / Chld v_max pos		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.000 [m/min]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1300.000 [m/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [m/min]
Description:	Displays the maximum velocity for the positive direction from the characteristic identification. This value corresponds to the maximum possible value in p1083 of the drive data set selected for the identification.		
Dependency:	Refer to: p1083		
<hr/>			
p3083	Motld current controller integral time identified / I_ctrl Tn ident		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: REL Min 0.00 [ms]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 1000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Integral time of the current controller determined by the motor data identification. This integral time can be changed after the identification and accepted in p1717 with p1910/p1960 = -3.		
Dependency:	Refer to: p1717, p1910		
<hr/>			
p3086	Chld maximum negative velocity / Chld v_max neg		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min -1300.000 [m/min]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 0.000 [m/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [m/min]
Description:	Displays the maximum velocity for the negative direction from the characteristic identification. This value corresponds to the minimum possible value in p1086 of the drive data set selected for the identification.		
Dependency:	Refer to: p1086		

p3088	MotId Motor model changeover speed operation with encoder ident. / MotMod n_chgSnsorI			
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Motor identification	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00000 [rpm]	210000.00000 [rpm]	0.00000 [rpm]	
Description:	Changeover speed for the motor model with encoder determined by the motor data identification. This changeover speed can be changed after the identification and accepted in p1752 with p1910/p1960 = -3.			
Dependency:	Refer to: p1752, p1910			
p3088	MotId Motor model changeover vel. operat. with encod. ident. / v_chg Ident encod			
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Motor identification	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00000 [m/min]	1300.00000 [m/min]	0.00000 [m/min]	
Description:	Changeover velocity for the motor model with encoder determined by the motor data identification. This changeover velocity can be changed after the identification and accepted in p1752 with p1910/p1960 = -3.			
Dependency:	Refer to: p1752, p1910			
p3090[0...n]	PolID elasticity-based configuration / PolID el config			
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3	
	Data type: Unsigned16	Dyn. index: MDS, p0130	Func. diagram: -	
	P-Group: Motor identification	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Sets the configuration for the elasticity-based pole position identification. Depending on the mechanical design (sequence machine - encoder - brake) and the braking force, the pole position identification can cause deflections with a different control sense. For bit 00 = 0: The deflection caused by the pole position identification acts in the positive control sense. For bit 00 = 1: The deflection caused by the pole position identification acts in the negative control sense. This can only occur for a linear measuring system if a brake is installed between the machine and the measuring system and the brake is powerful enough to do this.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Sign change	Yes	No
Dependency:	Refer to: p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p3091, p3092, p3093, p3094, p3095, p3096, r3097			
	Refer to: F07995			
Note:	PolID el: pole position identification, elasticity-based			

2 Parameters

2.2 List of parameters

p3091[0...n]	PolID elasticity-based ramp time / PolID el t_ramp		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.0 [ms]	Calculated: CALC_MOD_CON Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 1000.0 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 250.0 [ms]
Description:	Sets the ramp time for the current increase when executing the elasticity-based pole position identification. The current is ramped up in order to reduce the mechanical load on the machine.		
Dependency:	Refer to: p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p3090, p3092, p3093, p3094, p3095, p3096, r3097 Refer to: F07995		
Note:	PolID el: pole position identification, elasticity-based		
p3092[0...n]	PolID elasticity-based wait time / PolID el t_wait		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.0 [ms]	Calculated: CALC_MOD_CON Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 1000.0 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.0 [ms]
Description:	Sets the wait time between two measurements when executing the elasticity-based pole position identification. The wait time between two measurements is necessary in order to avoid mechanical resonance effects.		
Dependency:	Refer to: p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p3090, p3091, p3093, p3094, p3095, p3096, r3097 Refer to: F07995		
Note:	PolID el: pole position identification, elasticity-based		
p3093[0...n]	PolID elasticity-based measurement number / PolID el meas		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: Unsigned16 P-Group: Motor identification Not for motor type: - Min 6	Calculated: CALC_MOD_CON Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 56	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 12
Description:	Sets the number of measuring operations when executing the elasticity-based pole position identification. When the value is increased, the result is more accurate, however, the identification takes longer.		
Dependency:	Refer to: p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p3090, p3091, p3092, p3094, p3095, p3096, r3097 Refer to: F07995		
Note:	PolID el: pole position identification, elasticity-based		
p3094[0...n]	PolID elasticity-based deflection expected / PolID el defl exp		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: - Min 0.0000 [°]	Calculated: CALC_MOD_CON Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 90.0000 [°]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0030 [°]
Description:	Sets the expected deflection when executing the elasticity-based pole position identification. The following setting makes sense: p3094 < p3095		

Dependency: Refer to: p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p3090, p3091, p3092, p3093, p3095, p3096, r3097
Refer to: F07995

Note: PolID el: pole position identification, elasticity-based

p3094[0...n] PolID elasticity-based deflection expected / PolID el defl exp

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0000 [mm]	90.0000 [mm]	0.0030 [mm]

Description: Sets the expected deflection when executing the elasticity-based pole position identification.
The following setting makes sense: p3094 < p3095

Dependency: Refer to: p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p3090, p3091, p3092, p3093, p3095, p3096, r3097
Refer to: F07995

Note: PolID el: pole position identification, elasticity-based

p3095[0...n] PolID elasticity-based deflection permissible / PolID el defl exp

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0000 [°]	90.0000 [°]	1.0000 [°]

Description: Sets the permissible deflection when executing the elasticity-based pole position identification.
The following setting makes sense: p3094 < p3095

Dependency: Refer to: p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p3090, p3091, p3092, p3093, p3094, p3096, r3097
Refer to: F07995

Note: PolID el: pole position identification, elasticity-based

p3095[0...n] PolID elasticity-based deflection permissible / PolID el defl exp

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0000 [mm]	90.0000 [mm]	1.0000 [mm]

Description: Sets the permissible deflection when executing the elasticity-based pole position identification.
The following setting makes sense: p3094 < p3095

Dependency: Refer to: p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p3090, p3091, p3092, p3093, p3094, p3096, r3097
Refer to: F07995

Dependency:	Refer to: p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p3090, p3091, p3092, p3093, p3094, p3095, p3096 Refer to: F07995				

Note: PolID el: pole position identification, elasticity-based
 For bit 00 ... 15:
 Displays the actual status of the elasticity-based pole position identification.
 For bits 16 ... 23:
 Displays the status for the background state machine.
 For bits 24 ... 31:
 Displays the status for the time slices state machine.

p3100	RTC time stamp mode / RTC t_stamp mode		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2
Description:	Sets the mode for the time stamp		
Value:	0: Operating hours 1: UTC format 2: Operating hours + 01.01.2000		
Notice:	For p3100 = 1: The system prevents this setting from being changed. The parameter can only be influenced after "Set factory setting" or with a "Project download".		
Note:	RTC: Real-time clock UTC: Universal Time Coordinates For p3100 = 1: Time of day synchronization is only possible with this setting. The UTC time started, according to the definition on 01.01.1970 at 00:00:00 and is output in days and milliseconds.		

p3101[0...1]	Setting UTC time / Set UTC time		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4294967295	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting the UTC time. This means that the drive system is synchronized to the time specified by the time master. To start p3101[1] must be written to followed by p3101[0]. After writing to p3101[0], the UTC time is accepted.		
Index:	[0] = Milliseconds [1] = Days		
Dependency:	Refer to: p3100		

r3102[0...1]	Displaying UTC time / Display UTC time		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displaying the current UTC time.		
Index:	[0] = Milliseconds [1] = Days		
Dependency:	Refer to: p3100		

p3103	UTC synchronization process / UTC sync_process		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting the synchronization process.		
Value:	0: PING/SNAP 1: Reserved 2: Parameter 3: Reserved		
Dependency:	Refer to: p3101, p3104		
Note:	For p3103 = 0: The PING/SNAP technique allows the UTC time to be set with a high degree of accuracy using p3104 and p3101. For additional information, see SINAMICS S120 Function Manual Drive Functions (FH1). For p3103 = 2: Simply setting the UTC time via p3101.		

p3104	BI: UTC PING synchronization / UTC PING sync		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the PING event to set the UTC time.		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

r3107[0...3]	UTC synchronization time out of tolerance / UTC t_sync out tol		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the last synchronizing event that was out of tolerance.		
Index:	[0] = Milliseconds after sync [1] = Days after sync [2] = Milliseconds before sync [3] = Days before sync		
Dependency:	Refer to: p3109 Refer to: A01099		
Note:	For r3107[0, 1]: Displays the UTC time after synchronization. For 3107[2, 3]: Displays the UTC time before synchronization.		

r3108[0...1]	UTC synchronization deviation / UTC sync_dev		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the absolute value of the last synchronization deviation that was determined.		
Index:	[0] = Milliseconds [1] = Days		
p3109	UTC synchronization tolerance / UTC sync tol		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned16 P-Group: - Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100 [ms]
Description:	Sets the tolerance for time of day synchronization. When this tolerance is exceeded, an appropriate alarm is output.		
Dependency:	Refer to: A01099		
p3110	External fault 3 switch-on delay / Ext fault 3 t_on		
All objects	Can be changed: U, T Data type: Unsigned16 P-Group: Messages Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000 [ms]	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the delay time for external fault 3.		
Dependency:	Refer to: p2108, p3111, p3112 Refer to: F07862		
p3111	BI: External fault 3 enable / Ext fault 3 enab		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for the enable signal of external fault 3. External fault 3 is initiated by the following AND logic operation: - BI: p2108 negated - BI: p3111 - BI: p3112 negated		

2 Parameters

2.2 List of parameters

Dependency: Refer to: p2108, p3110, p3112
Refer to: F07862

p3111[0...n]	BI: External fault 3 enable / Ext fault 3 enab		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1

Description: Sets the signal source for the enable signal of external fault 3.
External fault 3 is initiated by the following AND logic operation:
- BI: p2108 negated
- BI: p3111
- BI: p3112 negated

Dependency: Refer to: p2108, p3110, p3112
Refer to: F07862

p3112	BI: External fault 3 enable negated / Ext flt 3 enab neg		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 0

Description: Sets the signal source for the negated enable signal of external fault 3.
External fault 3 is initiated by the following AND logic operation:
- BI: p2108 negated
- BI: p3111
- BI: p3112 negated

Dependency: Refer to: p2108, p3110, p3111
Refer to: F07862

p3112[0...n]	BI: External fault 3 enable negated / Ext flt 3 enab neg		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0

Description: Sets the signal source for the negated enable signal of external fault 3.
External fault 3 is initiated by the following AND logic operation:
- BI: p2108 negated
- BI: p3111
- BI: p3112 negated

Dependency: Refer to: p2108, p3110, p3111
Refer to: F07862

r3113.0...15**CO/BO: NAMUR message bit bar / NAMUR bit bar**

All objects

Can be changed: -**Calculated:** -**Access level:** 3**Data type:** Unsigned16**Dyn. index:** -**Func. diagram:** -**P-Group:** Messages**Unit group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

-

-

-

Description:

Display and BICO output for the status of the NAMUR message bit bar.

The faults and alarms are assigned to the appropriate signaling/message classes and influence a specific message bit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fault converter information electronics/software error	Yes	No	-
01	Network fault	Yes	No	-
02	DC link overvoltage	Yes	No	-
03	Fault drive converter power electronics	Yes	No	-
04	Drive converter overtemperature	Yes	No	-
05	Ground fault	Yes	No	-
06	Motor overload	Yes	No	-
07	Bus error	Yes	No	-
08	External safety-relevant shutdown	Yes	No	-
09	Mot encoder fault	Yes	No	-
10	Error communication internal	Yes	No	-
11	Fault infeed	Yes	No	-
15	Other faults	Yes	No	-

Note:

For bit 00:

Hardware or software malfunction was identified. Carry out a POWER ON of the component involved. If it occurs again, contact Technical Support.

For bit 01:

A line supply fault has occurred (phase failure, voltage level, ...). Check the line supply / fuses. Check the supply voltage. Check the wiring.

For bit 02:

The DC link voltage has assumed an inadmissibly high value. Check the dimensioning of the system (line supply, reactor, voltages). Check the infeed settings.

For bit 03:

An inadmissible operating state of the power electronics was identified (overcurrent, overtemperature, IGBT failure, ...). Check that the permissible load cycles are maintained. Check the ambient temperatures (fan).

For bit 04:

The temperature in the component has exceeded the highest permissible limit. Check the ambient temperature / control cabinet cooling.

For bit 05:

A ground fault / inter-phase short-circuit was detected in the power cables or in the motor windings. Check the power cables (connection). Check the motor.

For bit 06:

The motor was operated outside the permissible limits (temperature, current, torque, ...). Check the load cycles and limits that have been set. Check the ambient temperature / motor cooling.

For bit 07:

The communication to the higher-level control system (internal coupling, PROFIBUS, PROFINET, ...) is faulted or interrupted. Check the state of the higher-level control system. Check the communication connection/wiring. Check the bus configuration / clock cycles.

For bit 08:

A safety operation monitoring function (Safety) has detected an error.

For bit 09:

When evaluating the encoder signals (track signals, zero marks, absolute values, ...) an illegal signal state was detected. Check the encoder / state of the encoder signals. Observe the maximum frequencies.

For bit 10:

The internal communication between the SINAMICS components is faulted or interrupted. Check the DRIVE-CLiQ wiring. Ensure an EMC-compliant design. Observe the maximum permissible quantity structure / clock cycles.

2 Parameters

2.2 List of parameters

For bit 11:

The infeed is faulted or has failed. Check the infeed and the surroundings (line supply, filter, reactors, fuses, ...).
Check the closed-loop infeed control.

For bit 15:

Group fault. Determine the precise cause of the fault using the commissioning tool.

r3114.9...11	CO/BO: Messages status word global / Msg ZSW global			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: -	Calculated: -	Access level: 2

Description:	Displays the component of the alarm which has occurred.				
Dependency:	Refer to: r2110, r2122, r2123, r2124, r2125, r2134, r2145, r2146, r3123				
Note:	Value = 0: Assignment to a component not possible. The buffer parameters are cyclically updated in the background (refer to status signal in r2139). The structure of the alarm buffer and the assignment of the indices is shown in r2122.				
r3122[0...63]	Diagnostic attribute fault / Diag_attr fault				
All objects	Can be changed: - Data type: Unsigned32 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8060 Unit selection: - Expert list: 1 Factory setting -		
Description:	Displays the diagnostic attribute of the fault which has occurred.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Hardware replacement recommended	Yes	No	-
	15	Message has gone	Yes	No	-
	16	PROFIdrive fault class bit 0	High	Low	-
	17	PROFIdrive fault class bit 1	High	Low	-

2 Parameters

2.2 List of parameters

18	PROFIdrive fault class bit 2	High	Low	-
19	PROFIdrive fault class bit 3	High	Low	-
20	PROFIdrive fault class bit 4	High	Low	-

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3120

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the fault buffer and the assignment of the indices is shown in r0945.

For bits 20 ... 16:

Bits 20, 19, 18, 17, 16 = 0, 0, 0, 0, 0 --> PROFIdrive message class 0: not assigned

Bits 20, 19, 18, 17, 16 = 0, 0, 0, 0, 1 --> PROFIdrive message class 1: hardware fault/software error

Bits 20, 19, 18, 17, 16 = 0, 0, 0, 1, 0 --> PROFIdrive message class 2: line fault

Bits 20, 19, 18, 17, 16 = 0, 0, 0, 1, 1 --> PROFIdrive message class 3: supply voltage fault

Bits 20, 19, 18, 17, 16 = 0, 0, 1, 0, 0 --> PROFIdrive message class 4: DC link fault

Bits 20, 19, 18, 17, 16 = 0, 0, 1, 0, 1 --> PROFIdrive message class 5: power electronics faulted

Bits 20, 19, 18, 17, 16 = 0, 0, 1, 1, 0 --> PROFIdrive message class 6: overtemperature electronic components

Bits 20, 19, 18, 17, 16 = 0, 0, 1, 1, 1 --> PROFIdrive message class 7: ground fault/phase fault detected

Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 0 --> PROFIdrive message class 8: motor overload

Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 1 --> PROFIdrive message class 9: communication error to the higher-level control

Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 0 --> PROFIdrive message class 10: safe monitoring channel has identified an error

Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 1 --> PROFIdrive message class 11: incorrect position actual value/speed actual value or not available

Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 12: internal (DRIVE-CLiQ) communication error

Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 1 --> PROFIdrive message class 13: infeed unit faulted

Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 0 --> PROFIdrive message class 14: braking controller/Braking Module faulted

Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 1 --> PROFIdrive message class 15: line filter faulted

Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 0 --> PROFIdrive message class 16: external measured value/signal state outside the permissible range

Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 1 --> PROFIdrive message class 17: application/technology function faulted

Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 0 --> PROFIdrive message class 18: error in the parameterization/configuration/commissioning sequence

Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 1 --> PROFIdrive message class 19: general drive fault

Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 20: auxiliary unit faulted

r3123[0...63] Diagnostic attribute alarm / Diag_attr alarm

Description:

Displays the diagnostic attribute of the alarm which has occurred.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Hardware replacement recommended	Yes	No	-
11	Alarm class bit 0	High	Low	-
12	Alarm class bit 1	High	Low	-
13	Maintenance required	Yes	No	-
14	Maintenance urgently required	Yes	No	-
15	Message has gone	Yes	No	-
16	PROFIdrive fault class bit 0	High	Low	-
17	PROFIdrive fault class bit 1	High	Low	-
18	PROFIdrive fault class bit 2	High	Low	-
19	PROFIdrive fault class bit 3	High	Low	-
20	PROFIdrive fault class bit 4	High	Low	-

Dependency:

Refer to: r2110, r2122, r2123, r2124, r2125, r2134, r2145, r2146, r3121

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the alarm buffer and the assignment of the indices is shown in r2122.
For bit 12, 11:
These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only on certain automation systems with integrated SINAMICS functionality.
For bits 20 ... 16:
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 0, 0 --> PROFIdrive message class 0: not assigned
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 0, 1 --> PROFIdrive message class 1: hardware fault/software error
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 1, 0 --> PROFIdrive message class 2: line fault
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 1, 1 --> PROFIdrive message class 3: supply voltage fault
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 0, 0 --> PROFIdrive message class 4: DC link fault
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 0, 1 --> PROFIdrive message class 5: power electronics faulted
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 1, 0 --> PROFIdrive message class 6: overtemperature electronic components
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 1, 1 --> PROFIdrive message class 7: ground fault/phase fault detected
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 0 --> PROFIdrive message class 8: motor overload
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 1 --> PROFIdrive message class 9: communication error to the higher-level control
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 0 --> PROFIdrive message class 10: safe monitoring channel has identified an error
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 1 --> PROFIdrive message class 11: incorrect position actual value/speed actual value or not available
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 12: internal (DRIVE-CLiQ) communication error
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 1 --> PROFIdrive message class 13: infeed unit faulted
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 0 --> PROFIdrive message class 14: braking controller/Braking Module faulted
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 1 --> PROFIdrive message class 15: line filter faulted
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 0 --> PROFIdrive message class 16: external measured value/signal state outside the permissible range
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 1 --> PROFIdrive message class 17: application/technology function faulted
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 0 --> PROFIdrive message class 18: error in the parameterization/configuration/commissioning sequence
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 1 --> PROFIdrive message class 19: general drive fault
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 20: auxiliary unit faulted

-

Description:

Displays the component number of the oldest fault that is still active.

Dependency:

Refer to: r2131, r3131

2 Parameters

2.2 List of parameters

p3135	Suppress active fault / Supp act flt		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: U, T Data type: Unsigned32 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: 8060 Unit selection: - Expert list: 1 Factory setting 0000 0000 0000 0000 bin

Description: Sets the suppression of r2139.3 "Fault present" for certain fault responses.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	08	Suppression of fault response ENCODER	ON	OFF	-
	10	Suppression of fault response NONE	ON	OFF	-

Dependency: Refer to: p0491, r2139

Note: Depending on the suppression of a fault reaction in this parameter, r2139.1 "Acknowledgment required" is set when at least one fault occurs.

For bit 08:

The suppression is only effective if p0491 = 1.

p3201[0...n]	Excitation current outside the tolerance threshold value / I_exc n Tol thresh		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: ASM, PMSM, REL, RESM Min 0.1 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.0 [%]

Description: Sets the threshold value for the "excitation current outside tolerance" message for the excitation current monitoring. If the absolute value of the difference between the excitation current setpoint and actual value (r1641 - r1626) exceeds the threshold value and the hysteresis is longer than the selected delay time, then fault F07913 is output. This fault is withdrawn when the threshold voltage is undershot.

Dependency: Refer to: r1626, r1641, p3202, p3203

Refer to: F07913

Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).

p3202[0...n]	Excitation current outside the tolerance hysteresis / I_exc n Tol hyst		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: ASM, PMSM, REL, RESM Min 0.1 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.0 [%]

Description: Sets the hysteresis for the "excitation current outside tolerance" message for the excitation current monitoring.

Dependency: Refer to: p3201, p3203

Refer to: F07913

Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).

p3203[0...n]	Excitation current outside the tolerance delay time / I_exc n Tol t_del		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	10.0 [s]	1.0 [s]
Description:	Sets the delay time for the "excitation current outside tolerance" message for the excitation current monitoring.		
Dependency:	Refer to: p3201, p3202 Refer to: F07913		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).		
p3204[0...n]	Flux outside the tolerance threshold value / Flux n tol thresh		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.1 [%]	100.0 [%]	10.0 [%]
Description:	Sets the threshold value for the "flux outside the tolerance" message for the flux monitoring. If the absolute value of the difference between the flux setpoint and actual value (r0083 - r0084) falls below the threshold value with hysteresis longer than the selected delay time, then fault F07914 is output. This fault is withdrawn when the threshold voltage is undershot.		
Dependency:	Refer to: r0083, r0084, p3205, p3206 Refer to: F07914		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The flux monitoring is only active after magnetizing (r0056.4 = 1).		
p3205[0...n]	Flux outside the tolerance hysteresis / Flux n tol hyst		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.1 [%]	50.0 [%]	10.0 [%]
Description:	Sets the hysteresis for the "flux outside tolerance" message for the flux monitoring.		
Dependency:	Refer to: p3204, p3206 Refer to: F07914		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The flux monitoring is only active after magnetizing (r0056.4 = 1).		

2 Parameters

2.2 List of parameters

p3206[0...n]	Flux outside tolerance delay time / Flux n tol t_del		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	10.0 [s]	5.0 [s]
Description:	Sets the delay time for the "flux outside tolerance" message for the flux monitoring.		
Dependency:	Refer to: p3204, p3205 Refer to: F07914		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The flux monitoring is only active after magnetizing (r0056.4 = 1).		
p3207[0...n]	Zero current signal threshold value / I_0_sig thresh		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.01 [Arms]	10000.00 [Arms]	1.00 [Arms]
Description:	Sets the threshold value for the zero current signal for the zero current monitoring. If the absolute current falls below the threshold value then r2199.6 is set to 1 after the delay time has expired. The bit is reset if the threshold value and the hysteresis are exceeded again.		
Dependency:	Refer to: r2199, p3208, p3209		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).		
p3208[0...n]	Zero current signal hysteresis / I_0_sig hyst		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.01 [Arms]	10000.00 [Arms]	1.00 [Arms]
Description:	Sets the hysteresis for the zero current signal for the zero current monitoring.		
Dependency:	Refer to: p3207, p3209		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).		

p3209[0...n]	Zero current signal delay time / I_0_sig t_del		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: ASM, PMSM, REL, RESM Min 0.00 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10.00 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.02 [s]
Description:	Sets the delay time for the zero current signal for the zero current monitoring.		
Dependency:	Refer to: p3207, p3208		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The monitoring is only carried out for speeds less than the speed threshold in p2161 (r2199.0 = 1).		
p3233[0...n]	Torque actual value filter time constant / M_act_filt T		
SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000000 [ms]	Access level: 3 Func. diagram: 8013 Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the time constant for the PT1 element to smooth the torque actual value. The smoothed torque actual value is compared with the threshold values and is only used for messages and signals.		
p3235	Phase failure signal motor monitoring time / Ph_fail t_monit		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2000 [ms]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 320 [ms]
Description:	Sets the monitoring time for phase failure detection of the motor.		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	Monitoring is only effective for blocksize and booksize power units. For p3235 = 0 the function is deactivated. For VECTOR, the following applies: The monitoring is automatically deactivated during a flying restart for a motor that is still rotating.		
p3236[0...n]	Speed threshold value 7 / n_thresh val 7		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: REL Min 0.00 [rpm]	Calculated: CALC_MOD_LIM_REF Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 3000.00 [rpm]	Access level: 3 Func. diagram: 8012 Unit selection: p0505 Expert list: 1 Factory setting 100.00 [rpm]
Description:	Sets the speed threshold value for the signal "speed deviation model/external in tolerance" (BO: r2199.7).		
Dependency:	Refer to: r1443, r2169, r2199, p3237		

2 Parameters

2.2 List of parameters

p3237[0...n]	Hysteresis speed 7 / n_hysteresis 7		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [rpm]	Calculated: CALC_MOD_LIM_REF Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 200.00 [rpm]	Access level: 3 Func. diagram: 8012 Unit selection: p0505 Expert list: 1 Factory setting 2.00 [rpm]
Description:	Sets the hysteresis speed for the signal "speed deviation model/external" (BO: r2199.7).		
Dependency:	Refer to: r2199, p3236		
p3238[0...n]	OFF delay n_act_motor model = n_act external / t_del n_a = n_ext		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: REL Min 0.0 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.0 [s]	Access level: 3 Func. diagram: 8012 Unit selection: - Expert list: 1 Factory setting 3.0 [s]
Description:	Sets the OFF delay for the signal "speed deviation model/external in tolerance" (BO: r2199.7). The smoothed actual speed of the motor model r2169 is compared with the speed measured externally r1443 (threshold value p3236).		
Dependency:	Refer to: p3236, p3237		
p3240[0...n]	CI: I2t input value signal source / I2t in_value s_src		
VECTOR (Ext msg), VECTOR_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, REL, RESM Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 4 Func. diagram: 8022 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the input value of the freely parameterizable I2t monitoring.		
Dependency:	Refer to: p3241, p3242, p3243, r3244		
Notice:	To activate the freely parameterizable I2t monitoring, the following applies: - the function module "Extended messages/monitoring" must be activated (r0108.17 = 1). - the maximum duration must be set greater than zero (p3242 > 0).		
Note:	Application example: Excitation current monitoring for the separately excited synchronous motor.		
p3241[0...n]	Permissible I2t continuous value / Perm I2t cont val		
VECTOR (Ext msg), VECTOR_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: ASM, PMSM, REL, RESM Min 10.00 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 200.00 [%]	Access level: 4 Func. diagram: 8022 Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the permissible continuous value of the freely parameterizable I2t monitoring. The integrator value in r3244 decreases if the value received via connector input p3240 is higher than the value set in p3241. The integrator value in r3244 increases if the value received via connector input p3240 is less than the value set in p3241.		
Dependency:	Refer to: p3240, p3242, p3243, r3244		

p3242[0...n]	I2t maximum duration / I2t max_dur		
VECTOR (Ext msg), VECTOR_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, REL, RESM	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: -	Access level: 4 Func. diagram: 8022 Unit selection: - Expert list: 1
	Min 0.00 [s]	Max 3600.00 [s]	Factory setting 0.00 [s]
Description:	Sets the maximum duration for 100 % overload (corresponding to p3241 + 100 %) of the freely parameterizable I2t monitoring. Setting example: Operation should be possible at 150 % of the input quantity for a duration of 3 s for a permissible continuous value p3241 = 110 %. As a consequence, the following settings value is obtained: $p3242 = ((150 \times 150 - 110 \times 110) / ((100 + 110) \times (100 + 110) - 110 \times 110)) \times 3 \text{ s} = 0.975 \text{ s}$		
Dependency:	Refer to: p3240, p3241, p3243, r3244		
Notice:	For p3242 = 0, the freely parameterizable I2t monitoring is deactivated.		
Note:	After this time expires for 100 % overload, fault F07824 is output and status bit r2199.14 is set. For lower overload conditions, the permissible duration extends corresponding to the specified setting example.		
p3243[0...n]	I2t alarm thresh / I2t alarm thresh		
VECTOR (Ext msg), VECTOR_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: ASM, PMSM, REL, RESM	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: -	Access level: 4 Func. diagram: 8022 Unit selection: - Expert list: 1
	Min 0.00 [%]	Max 99.90 [%]	Factory setting 50.00 [%]
Description:	Sets the alarm threshold for the I2t integrator value (r3244) scaled to 100 %. When the alarm threshold is reached, alarm A07823 is output and status bit r2199.13 is set.		
Dependency:	Refer to: p3240, p3241, p3242, r3244		
r3244	CO: Actual I2t integrator value / Act I2t integ_val		
VECTOR (Ext msg), VECTOR_AC (Ext msg), VECTOR_I_AC (Ext msg)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, REL, RESM	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT	Access level: 3 Func. diagram: 8022 Unit selection: - Expert list: 1
	Min - [%]	Max - [%]	Factory setting - [%]
Description:	Display and connector output for the actual integrator value of the freely parameterizable I2t monitoring. The value is scaled, so that the maximum permissible overload is reached at 100 %.		
Dependency:	Refer to: p3240, p3241, p3242, p3243		

p3290	Variable signaling function start / Var sig start			
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 5301	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0010 bin	
Description:	Settings for start/stop and the comparison type for the variable signaling function.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Activate function	Active	Not active
	01	Comparison with sign	With sign	Without sign
Dependency:	Refer to: p3291, p3292, p3293, r3294, p3295, p3296, p3297, p3298, p3299			
	Refer to: A02085			
Notice:	The parameters of the variable message function are only checked and become effective when starting. Otherwise, an alarm is output.			

p3291	CI: Variable signaling function signal source / Var sig S_src			
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / Integer16	Dyn. index: -	Func. diagram: 5301	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source for the variable signaling function.			
Dependency:	Refer to: p3290, p3292, p3293			
Notice:	This parameter is only checked and becomes effective when restarting the variable message function.			
Note:	For p3291 = 1: (internal Siemens):			
	In this case, the signal source is defined via the memory address (p3292) and the data type (p3293).			
	As the memory address can be different for each version, it must always be redetermined.			
	Procedure:			
	- set the memory address and data type (p3292, p3293).			
	- establish the BICO interconnection (p3291 = 1).			

p3292	Variable signaling function signal source address / Var sig S_src addr			
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 5301	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0000 hex	FFFF FFFF hex	0000 hex	
Description:	Sets the address of the signal source for the variable signaling function.			
Dependency:	Refer to: p3290, p3291			
Caution:	The software can crash if an incorrect address and data type are set.			
				
Notice:	This parameter is only checked and becomes effective when restarting the variable message function.			
Note:	This parameter should only be set for p3291 = 1.			

p3293 Variable signaling function signal source data type / Var sig S_src type			
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: -	Func. diagram: 5301
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	7	0

Description: Sets the data type of the signal source for the variable signaling function.

Value:

0:	Unknown
1:	U8, Unsigned8
2:	I8, Signed8
3:	U16, Unsigned16
4:	I16, Signed16
5:	U32, Unsigned32
6:	I32, Signed32
7:	Float, FloatingPoint32

Dependency: Refer to: p3290, p3291

Caution: The software can crash if an incorrect address and data type are set.

Notice: This parameter is only checked and becomes effective when restarting the variable message function.

Note: This parameter should only be set for p3291 = 1.

r3294 BO: Variable signaling function output signal / Var sig outp_sig			
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 5301
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Display and binector output of the output signal for the variable signaling function.

Dependency: Refer to: p3290, p3291, p3295, p3296, p3297, p3298

p3295 Variable signaling function threshold value / Var sig thresh_val			
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5301
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-340.28235E36	340.28235E36	0.000

Description: Sets the threshold value for the variable signaling function.

Dependency: Refer to: p3290

Notice: This parameter is only checked and becomes effective when restarting the variable message function.

p3296 Variable signaling function hysteresis / Var sig hyst			
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5301
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	340.28235E36	0.000

Description: Sets the hysteresis for the variable signaling function.

Dependency: Refer to: p3290

Notice: This parameter is only checked and becomes effective when restarting the variable message function.

p3297	Variable signaling function pickup delay / Var sig t_pickup		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 5301
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	10000 [ms]	0 [ms]
Description:	Sets the pickup delay for the variable signaling function.		
Dependency:	Refer to: p3290		
Notice:	This parameter is only checked and becomes effective when restarting the variable message function. Values that do not comply with the following condition are rejected: Pickup delay (p3297) >= sampling time (p3299)		
Note:	For a value of 0, the pickup delay is disabled. The output signal is set if the condition for the 1 signal is fulfilled for longer than the selected time.		

p3298	Variable signaling function dropout delay / Var sig t_dropout		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 5301
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	10000 [ms]	0 [ms]
Description:	Sets the dropout delay for the variable signaling function.		
Dependency:	Refer to: p3290		
Notice:	This parameter is only checked and becomes effective when restarting the variable message function. Values that do not comply with the following condition are rejected: Dropout delay (p3298) >= sampling time (p3299)		
Note:	For a value of 0, the dropout delay is disabled. The output signal is reset if the condition for the 0 signal is fulfilled for longer than the selected time.		

p3299	Variable signaling function sampling time / Var sig t_sample		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5301
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.000 [ms]	4.000 [ms]	4.000 [ms]
Description:	Sets the sampling time for the variable signaling function.		
Dependency:	Refer to: p3290		
Notice:	This parameter is only checked and becomes effective when restarting the variable message function. The following must apply for the setting: Sampling time (p3299) <= pickup delay (p3297), dropout delay (p3298)		
Note:	Only the following values can be set: 1000, 2000, 3000, 4000		

p3320[0...n]	Fluid flow machine power point 1 / Fluid_mach P1		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	25.00
Description:	For the energy-saving display of a fluid-flow machine, a typical flow characteristic $P = f(n)$ with 5 points along the characteristic is required. This parameter specifies the power (P) of point 1 as a [%]. The characteristic comprises the following value pairs: Power (P) / speed (n) p3320 / p3321 --> point 1 (P1 / n1) p3322 / p3323 --> point 2 (P2 / n2) p3324 / p3325 --> point 3 (P3 / n3) p3326 / p3327 --> point 4 (P4 / n4) p3328 / p3329 --> point 5 (P5 / n5)		
Dependency:	Refer to: r0041, p3321, p3322, p3323, p3324, p3325, p3326, p3327, p3328, p3329		
Note:	The reference value for power and speed is the rated power/rated speed. The energy saved is displayed in r0041.		
p3321[0...n]	Fluid flow machine speed point 1 / Fluid_mach n1		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -

p3400

Infeed configuration word / INF config_word

A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8940
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 1010 bin

Description: Sets the configuration word of the infeed.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Smart Mode	ON	OFF	-
	01	Flat-Top Mode	ON	OFF	-
	03	Vdc controller	ON	OFF	-
	05	Line supply voltage sensing with VSM	ON	OFF	-

Dependency: Refer to: p0210

Notice: For bit 00:

The following applies for Active Infeed chassis:

When used with an Active Interface Module (AIM), it is not permissible to activate the Smart Mode.

Note: For bit 00:

In the Smart Mode, the DC link voltage is not controlled - however, infeed can still regenerate. The magnitude of the DC link voltage depends on the actual line supply voltage and the DC link load.

The following applies for Active Infeed booksize:

When setting the device supply voltage (p0210) to greater than 415 V, then the Smart Mode is automatically activated. This means that the 660 V limit can be maintained for the steady-state DC link voltage (p0280) up to a line supply voltage of 480 V. If higher DC link voltages are permissible, then p0280 can be increased and the Smart Mode deactivated (see p0210).

For bit 01:

If the Flat Top Mode is deactivated, switching losses are higher. This means that the full power is no longer continuously available.

For p3400.0 = 1 or p1810.15 = 1, this bit is not effective.

For bit 03:

If the Vdc controller is switched out, overvoltage or undervoltage conditions occur in the DC link if no other voltage-regulating component is located in the DC link.

For p3400.0 = 1, this bit is not effective.

For bit 05:

If a VSM is detected when commissioning the system, this bit is automatically set.

When the bit is set, the line supply voltage input of the VSM must be connected (connected at the line side of the line reactor).

The bit must be set in the case of chassis power units.

VSM: Voltage Sensing Module

r3402

Infeed internal state / INF state int

A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: 8832, 8932
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	12	-

Description: Displays the internal status of the infeed module.

Value:

0: Initialization
1: Fault
2: No ON command
3: Offset measurement running
4: ON delay active

- 5: Precharging running
- 6: Pulse enable missing
- 7: Synchronization running
- 8: Voltage ramp-up active
- 9: Operation
- 10: Shutdown running
- 11: Identification running
- 12: Magnetization/black start running

r3402 Infeed status internal BIC / INF state int

B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: 8932
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	-

Description: Displays the internal status of the infeed module.

Value:

- 0: Initialization
- 1: Fault
- 2: No ON command
- 3: Offset measurement running
- 4: ON delay active
- 5: Precharging running
- 6: Operation

r3405.0...7 CO/BO: Infeed status word / Inf ZSW

SERVO (Tech_ctrl), SERVO_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8828, 8928
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Display and BICO output for the status word of the infeed unit.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Smart Mode active	Yes	No	-
	01	Vdc-ctrl active	Yes	No	-
	02	Phase failure detected	Yes	No	-
	03	Current limit reached	Yes	No	-
	04	Infeed operates in generator/motor mode	Regenerative mode	Motor mode	-
	05	Motor mode inhibited	Yes	No	-
	06	Generator mode inhibited	Yes	No	-
	07	DC link undervoltage alarm threshold undershot	Yes	No	-

Dependency: Refer to: A06810

Note:

- For bit 00:
Smart Mode is activated with p3400.0.
- For bit 01:
The DC link voltage closed-loop control is activated with parameters p3400.3 and p3513.
- For bit 02:
The bit is set if messages A06205 (phase failure) or A06208 (asymmetry) are output.
The bit is reset for the following events:
 - the infeed had reached the normal operating state again after a phase failure has been bypassed/buffered (p3402 = 9).
 - the pulse enable is withdrawn due to a fault or switching off with OFF1/OFF2.
 - alarm message A6208 is reset.
- For bit 03:
The present current limit is displayed in r0067.

2 Parameters

2.2 List of parameters

For bit 04:

An active current setting $r0078 \geq 0$ means infeed operation in motor mode; an active current setting $r0078 < 0$ means regenerative operation in generator mode.

For bit 05:

The motor mode inhibit is activated with p3532.

For bit 06:

The generator mode inhibit is activated with p3533.

For bit 07:

When the alarm threshold is fallen below, alarm A06810 is output and $r3405.7$ is set = 1.

The alarm threshold is obtained from the sum of the undervoltage threshold p0296 and offset r0279. As a consequence, the alarm threshold is only effective for $p0279 > 0$.

Monitoring only takes place when operational.

The following applies for states $r3402 \leq 5$ and $r3402 = 12$: $r3405.7 = 0$.

For bit 07:

When the alarm threshold is fallen below, alarm A06810 is output and $r3405.7$ is set = 1.

The alarm threshold is obtained from the sum of the undervoltage threshold p0296 and offset r0279. As a consequence, the alarm threshold is only effective for $p0279 > 0$.

Monitoring only takes place when operational.

The following applies for states $r3402 \leq 5$ and $r3402 = 12$: $r3405.7 = 0$.

p3409		Infeed line frequency setting / INF f_line_mode		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	1	1	
Description:	Sets the mode to detect the line supply frequency.			
Value:	0: Line supply frequency setting 50/60 Hz off 1: Line supply frequency setting 50/60 Hz on			
Dependency:	Refer to: p0211, p0284, p0285 Refer to: A06350, A06351, F06500			
Note:	For p3409 = 1, the following applies: After operation has been enabled, the rated line supply frequency (p0211) is automatically set to a value of 50 Hz or 60 Hz corresponding to the currently measured frequency. This means that the parameter value of p0211 is, under certain circumstances, changed. For p3409 = 0, the following applies: The system does not change parameter p0211.			
p3410		Infeed identification method / INF Ident_type		
A_INF, S_INF, R_INF	Can be changed: C2(1), T	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	5	5	
Description:	Sets the line and DC link parameter identification routine for the infeed module.			
Value:	0: Identification (Id) off 1: Activate identification (Id) 2: Set controller settings 3: Save identification and controller settings 4: Save identification and controller settings with L adaptation 5: Reset save Id and controller setting with L adaptation			
Dependency:	Refer to: r3411, r3412, r3414, p3415, p3416, p3417, p3421, p3422, p3424, p3555, p3560, p3614 Refer to: A06400			
Notice:	For p3410 = 1, 3, 4, 5, alarm A06400 is output and designates that the selected identification will take place the next time that the pulses are enabled. The line and DC link adaptation is not permissible for Smart Line Modules in the chassis format. During identification, no additional loads may be switched-in/switched out.			
Note:	p3410 is automatically set to 0 after an identification run has been completed. When p3410 = 1 an identification run for the total inductance and DC link capacitance is initiated when the pulses are next enabled. The results are displayed in r3411 and r3412. If a Voltage Sensing Module (VSM) is connected, then the line inductance (r3414) is also measured. The infeed then goes into the ready for switching on state. For p3410 = 2, the data (r3411, r3412 and r3414) determined during the identification run (p3410 = 1) are transferred into p3421, p3422 and p3424. The control loop parameters are suitably scaled to achieve a rugged controller setting (p3425); the fast controller response (p3555[2]) and the current actual value smoothing (p3614) are pre-set. Calculations for the controller are then repeated. The user must save the data in a non-volatile fashion so that the new controller setting is effective the next time that the system is switched on. When p3410 = 3 an identification run for the inductance and DC link capacitance is initiated when the pulses are next enabled. Data determined during the identification (r3411, r3412, r3414) are used, as described under p3410 = 2 for the setting of p3421, p3422, p3424, p3425, p3555 as well as p3614, and the controller is re-calculated. All of the parameters for the infeed module are then automatically stored in a non-volatile memory. The infeed continues to operate without any interruption with the new controller parameters.			

2 Parameters

2.2 List of parameters

When p3410 = 4 an identification run for the inductance and DC link capacitance is initiated when the pulses are next enabled. Data determined during the identification (r3411, r3412, r3414) are used, as described under p3410 = 2 for the setting of p3421, p3422, p3424, p3425, p3555 as well as p3614, and the controller is re-calculated. The line inductance identification is then repeated, if p3415[1] > p3514[0]. If the inductance measured the second time is lower than the first, the parameters are written to the current controller adaptation (p3620, p3622). All of the parameters for the infeed module are then automatically stored in a non-volatile memory. The infeed continues to operate without any interruption with the new controller parameters.

For p3410 = 5, the same measurements and write operations are always carried-out as for p3410 = 4. However, for the first identification run, initially the controller setting is reset by setting p3421 = p0223 + p0225, p3424 = p0225, p3422 = p0227 and p3425[0...1] = 100 %. Further, before the measurements are carried out, a brief identification run is executed to coarsely set the controller.

r3411[0...1]	Infeed identified inductance / INF L ident		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the identified total inductance. The value corresponds to the total inductance between the rigid line supply and the infeed input terminals.		
Index:	[0] = Run 1 [1] = Run 2		
Dependency:	Refer to: p3410		
Note:	The value measured in the first identification run is displayed in r3411[0] (for p3410 = 1, 3, 4, 5). This value is transferred to p3421. The value measured in the second identification run (for p3410 = 4, 5) is displayed in r3411[1] - this value is used to set the current controller adaptation (p3622). For the inductance of the commutating reactor, the following applies. r3411 - r3414		

r3412[0...1]	Infeed DC link capacitance identified / INF C_DClink ident		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mF]	- [mF]	- [mF]
Description:	Displays the identified total DC link capacitance.		
Index:	[0] = Run 1 [1] = Run 2		
Dependency:	Refer to: p3410		
Note:	The value measured in the first identification run (for p3410 = 1, 3, 4, 5) is displayed in r3412[0]. For p3410 = 1, 3, this value is transferred to p3422. The DC link capacitance is not measured at the second identification run. The total DC link capacitance of a DC link group comprises the sum of the sub-capacitances of all motor/infeed modules and the additional DC link capacitors.		

r3414[0...1]		Infeed line supply inductance identified / INF t_line ident		
A_INF, S_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [mH]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [mH]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [mH]	
Description:	Displays the identified line supply inductance. The value corresponds to the total inductance between the stiff line supply and the connection point of the Voltage Sensing Module (VSM).			
Index:	[0] = Run 1 [1] = Run 2			
Dependency:	Refer to: p3410			
Notice:	The value is only automatically determined for the line supply identification (p3410 > 0), if operation with a Voltage Sensing Module is selected (p3400.5 = 1). Otherwise, r3414 = 0 is displayed.			
Note:	The value measured in the first identification run is displayed in r3414[0] (for p3410 = 1, 3, 4, 5). This value is transferred to p3421. The value measured in the second identification run is displayed in r3414[1] (for p3410 = 4, 5). For the inductance of the commutating reactor, the following applies. r3411 - r3414			
p3415[0...1]		Infeed excitation current L identification / INF I_exc L-ident		
A_INF, S_INF, R_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 1.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 75.00 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 20.00 [%]	
Description:	Sets the magnitude of the excitation frequency for the L identification. The setting is made as a percentage of the maximum power unit current (r0209).			
Index:	[0] = Run 1 [1] = Run 2			
Dependency:	Refer to: p3410, r3411, p3421, p3620, p3622			
Notice:	To correctly identify the current level (p3410 = 4, 5) depending on the reactor inductance, the following must apply: p3415[0] < p3415[1] For A_INF booksized units, the following applies: The interrelationship between the reactor inductance and the current magnitude should be measured. Generally, the factory setting of p3415[0] and p3415[1] should be kept. For chassis units and S_INF booksized units, the following applies: Generally, there is only a very low inter-relationship between the reactor inductance and the current magnitude. This means that for the factory setting p3415[0] = p3415[1] = 20 %, i.e. run 2 is not executed.			
Note:	The reactive current for identification run 1 is set in p3415[0] (basic controller setting). The reactive current for identification run 2 is set in p3415[1] (adaptation of the current controller when reducing the reactor inductance with increasing current magnitude).			

p3416	Infeed excitation amplitude C identification / INF exc_amp C_Id		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.10 [%]	20.00 [%]	2.00 [%]
Description:	Sets the level of the excitation frequency for identification of the total DC link capacitance. The amplitude is specified as a percentage of the setpoint DC link voltage (p3510).		
Dependency:	Refer to: p3410, r3412, p3422		

p3417	Infeed excitation frequency C identification / INF f_exc C_ID		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.00 [Hz]	200.00 [Hz]	50.00 [Hz]
Description:	Sets the level of the excitation frequency for identification of the total DC link capacitance.		
Dependency:	Refer to: p3410, r3412, p3422		

p3421	Infeed inductance / INF L		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.001 [mH]	2000.000 [mH]	1.000 [mH]
Description:	Sets the total effective inductance for the closed-loop current control from the sum of the line supply inductance and inductance of the line reactor. This parameter is pre-set to the sum of p0223 and p0225.		
Dependency:	Refer to: p0223, p0225, p3410, p3425, p3614, p3622		
Note:	The controller setting is derived from this value and p3425. The value can be automatically determined using the identification run (p3410). For a parallel circuit, the value corresponds to the inductance of a power unit. For the inductance value of the line reactor, p3421 - p3424 applies.		

p3422	Infeed DC link capacitance / INF C_DCL		
SERVO (Tech_ctrl), SERVO_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), A_INF, S_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.20 [mF]	2000.00 [mF]	2.00 [mF]
Description:	Sets the DC link capacitance for the closed-loop voltage control. This value is pre-set with p0227.		
Dependency:	Refer to: p0227, p3410, p3425		
Note:	The controller setting is derived from this value and p3425. A suitable value can be automatically determined using the identification run (p3410).		

p3422	DC link capacitance total / C_DC tot		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.20 [mF]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2000.00 [mF]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2.00 [mF]
Description:	Sets the total DC link capacitance for closed-loop voltage control. The capacitance of one power unit is pre-assigned to this value. The value should be adapted according to the number of power units.		
Note:	The controller setting for the DC link voltage controller is derived from this value.		
p3424	Infeed line supply inductance / INF L_line		
A_INF, S_INF, R_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.001 [mH]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000.000 [mH]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.001 [mH]
Description:	Sets the line supply inductance. This parameter is pre-set with p0225.		
Dependency:	Refer to: p0223, p0225, p3410, p3425, p3622		
Note:	The controller setting is derived from this value and p3425. The value can be automatically determined using the identification (p3410) if operation with a Voltage Sensing Module is selected. Otherwise, p3424 is set to p3421 - p0223.		
p3425[0...3]	Infeed control loop parameter scaling / INF par scal		
A_INF, S_INF, R_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 1.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000.00 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the scaling factors for controller parameters p3421, p3422 and p3424.		
Index:	[0] = Inductance value for closed-loop control [1] = Capacitance value for closed-loop control [2] = Inductance value for decoupling [3] = Inductance value for line model		
Dependency:	Refer to: p3410, p3421, p3422, p3424, p3614		
Note:	For index 0, 1: p3425 is automatically and optimally set when setting the controller parameters with the line supply data identification p3410 >= 2. As the line supply inductance (p3424) increases in comparison to the total inductance (p3421), lower values must be selected for p3425. This means that the control is adapted to weak line supplies with high relative short-circuit voltage uk or high line supply inductance (refer to p3614). The scaled control loop parameters become effective for closed-loop control, i.e. the products p3421 * p3425[0] and p3422 * p3425[1] represent the controller setting. For index 2: Sets the inductance value, which is used for the calculations in the decoupling block of the closed-loop current control. The value of 100% corresponds to the inductance p3421 * p3425[0]. Setting values between 100 % and 200 % are recommended for fluctuating line fault levels.		

2 Parameters

2.2 List of parameters

For index 3:

Sets the value for the line inductance, which is used for the calculations in the line (grid) model of the PLL.

The value of 100 % corresponds to inductance p3424.

Setting values up to 4x of p0223 are recommended for fluctuating line fault levels.

p3440		Smart Mode configuration / Smart Mode config			
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0001 bin		
Description:	Sets the configuration of the Smart Mode.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Soft Pulse Mode	ON	OFF	-
	01	Extended Smart Mode	ON	OFF	-
	02	De-select automatic line identification after POWER ON	Yes	No	-
Notice:	For bit 00: This parameter influences the line harmonics for regenerative operation. For operation with Active Interface Module (AIM) the soft-pulse mode must be activated.				
	For bit 01: Operating BLM and SLM together (mixed operation) with bit 1 = 1 is not permissible.				
Note:	For bit 00: When the pulsed mode for Smart Mode is deactivated, when regenerating, higher phase current gradients occur. For Smart Line Modules in the "chassis" format, pulsed operation is not effective.				
	For bit 01: For active Extended Smart Mode, for partial load operation, the line reactive power requirement must be reduced and the average value of the DC link voltage increased. At rated load and overload, the operating behavior is equivalent to the Smart Mode (p3440.1 = 0).				
	For bit 02 (only effective for bit 01 = 1): This line supply identification is only effective in the Extended Smart Mode (it should not be confused with the line supply identification using p3410). The values for inductance and DC link capacitance are required for the Extended Smart Mode (p3448[0...1]). Automatic line supply identification must be deselected (p3440.2 = 1) when manually entering p3448[0...1]. When automatic line supply identification is selected (p3440.2 = 0), these values are determined at the first pulse enable after each POWER ON and saved in p3448[0...1]. A new line supply identification with the next pulse enable can be initiated by setting p3440.2 = 1 and then by setting p3440.2 back to = 0.				

p3441[0...1]		Smart Mode Vdc ctrl Kp/Tn / SLM Vdc_ctrl Kp/Tn		
A_INF, S_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [%]	1000.00 [%]	100.00 [%]	
Description:	Sets the standardized proportional gain (index 0) and the integral time (index 1) for the DC link voltage controller (Vdc controller) in Smart Mode.			
Index:	[0] = Proportional gain [1] = Integral time			
Note:	A value of 100% corresponds to the basic setting derived from loop control parameters (p0115, p3409, p3448[1]).			

p3442[0...1] Smart Mode smoothing times / SLM t_smooth			
A_INF, S_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	20.00 [ms]	[0] 0.25 [ms] [1] 1.00 [ms]
Description:	Sets the time constant for PT1 filtering of the DC link voltage for the Vdc controller (index 0) and the monitored DC link load current (index 1) in Smart Mode.		
Index:	[0] = DC link voltage actual value (r3445) [1] = Monitored DC link load current (r3446[2])		
Dependency:	Refer to: r3445, r3446		
p3443[0...1] Smart Mode line commutation current threshold values / SLM line com I_thr			
A_INF, S_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	1000.00 [%]	[0] 100.00 [%] [1] 200.00 [%]
Description:	Sets the current threshold values for the deactivation (index 0) and activation (index 1) of line commutation in Smart Mode.		
Index:	[0] = Deactivation [1] = Activation		
Note:	A value of 100% corresponds to the minimum feedback load current derived from the loop control parameters (p0210, p0211, p3409, p3448[0], p3432) without infeed components. To avoid frequent changeovers in operation close to the changeover point, the value for activation (index 1) must be significantly higher than the value for deactivation (index 0).		
p3444[0...3] Smart Mode voltages / SLM voltages			
A_INF, S_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	105.00 [%]	[0] 90.00 [%] [1] 100.50 [%] [2] 70.00 [%] [3] 70.00 [%]
Description:	Sets voltage values for the Extended Smart Mode (p3440.1 = 1).		
Index:	[0] = Minimum line voltage for feedback [1] = DC link voltage setpoint [2] = Line supply undervoltage threshold [3] = Line supply symmetry threshold		

2 Parameters

2.2 List of parameters

Note: For index 0:
Sets the minimum line voltage for regenerative feedback into the line supply (energy recovery).
If the voltage threshold is fallen below, feedback is deactivated to prevent the DC link voltage decaying in the event of a significant system voltage dip.
A value of 100% corresponds to the supply voltage set in p0210.
For index 1:
Sets the DC link voltage setpoint.
A value of 100% corresponds to the rectified value of the actual line voltage.
The value must be greater than or equal to 100%.
For index 2:
Sets the voltage threshold to identify a line supply undervoltage condition (A06205 with alarm value 32).
A value of 100 % corresponds to the voltage threshold set using p0283.
For index 3:
Sets the voltage threshold for monitoring line supply symmetry.
A line supply undervoltage is signaled when this threshold is fallen below (A06205 with alarm value 32).

r3445[0...1] Smart Mode voltages display / SLM voltages disp

A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 5_2	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]

Description: Displays the various voltages in Smart Mode.

Index: [0] = DC link voltage smoothed
[1] = DC link voltage setpoint

Dependency: Refer to: r0070, p3442

Note: The display values are only valid when the Smart Mode (p3400.0 = 1) has been activated and the pulses enabled.
For index 0:
Displays the DC link voltage actual value measured and smoothed with p3442[0].
The smoothed value is used for the DC link voltage controller (Vdc controller) in Smart Mode.
The DC link voltage is also available unsmoothed (r0070).
For index 1:
Displays the DC link voltage setpoint for the DC link voltage controller (Vdc controller) in Smart Mode.

r3446[0...2] Smart Mode currents / SLM currents

A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 6_4	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]

Description: Displays the various current values in Smart Mode.

Index: [0] = DC link current setpoint
[1] = Vdc controller I component
[2] = Monitored DC link load current

Note: For index 0:
Displays the DC link current setpoint requested by the DC link voltage controller (Vdc controller) in Smart Mode.
For index 1:
Displays the I component of the DC link voltage controller (Vdc controller).
For index 2:
Displays the monitored DC link load current.

r3447	Smart Mode OFF angle / SLM phi_OFF		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the OFF angle requested by the DC link voltage controller (Vdc controller) in Smart Mode.		
Note:	A value = 30 ° deactivates feedback. A value = 0 ° requests maximum feedback (line commutation).		
p3448[0...1]	Smart Mode inductance/DC link capacitance / SLM L/C		
A_INF, S_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.00 [%]	10000.00 [%]	[0] 110.00 [%] [1] 100.00 [%]
Description:	Sets the inductance and/or the DC link capacitance for the Extended Smart Mode.		
Index:	[0] = Inductance referred to p0223 [1] = DC link capacitance referred to p0227		
Notice:	When automatic line supply identification is selected for the Extended Smart Mode (p3440.2 = 0), the following applies: - the inductance and DC link capacitance values are calculated at the first pulse enable after each POWER ON and saved in p3448[0...1]. - the value range of the automatic identification is limited (100 % <= p3448[0...1], p3448[0] <= 100 % + 100 % / p0120). As a consequence, the preassigned values for the commutation inductance (p0223) and the DC link capacitance (p0227) must be correctly entered. - values entered manually are overwritten after the next POWER ON. When automatic line supply identification is deselected for the Extended Smart Mode (p3440.2 = 1), the following applies: - the inductance and DC link capacitance values must be entered manually.		
Note:	For index 0: The value is used in the calculation of the reference value of p3443 and in the controller models. A value of 100% corresponds to the inductance parameterized in p0223. For a parallel circuit, the value corresponds to the inductance of a power unit. Values less than 100 % do not make sense - and indicate an incorrect setting of p0223 or unsuitable operating points for the line supply identification (p3440.2). For index 1: The value is used in the calculation of the reference value of p3441 and in the controller models. A value of 100% corresponds to the capacitance parameterized in p0227. The value includes the capacitances of all modules connected on the DC link. Values less than 100 % do not make sense - and indicate an incorrect setting of p0227 or unsuitable operating points for the line supply identification (p3440.2).		

r3452	Infeed PLL status / INF PLL status		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	7	-
Description:	Displays the status of the line supply PLL.		
Value:	0: Initialization running 1: Error when synchronizing 2: Line analysis 3: Calculation line data 4: Pulse enable missing 5: PLL calculation 6: Final status controlled / Smart Mode 7: Reserved		

p3457[0...2]	Infeed PLL supplementary settings / INF PLL suppl_set		
A_INF, S_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	300.00 [%]	0.00 [%]
Description:	Sets the scaling values for the line PLL of the infeed.		
Index:	[0] = Synchronization fixed voltage value [1] = Synchronization angular offset [2] = Synchronization angular linearity		
Notice:	The default settings only have to be changed in exceptional cases. Unsuitable parameter values result in overcurrents and overvoltages.		
Note:	The setting values are only directly effective for pulse enable or for line synchronization. For adaptations, which are also effective in operation, the PLL can be switched over to the configurable transformer model (p5495). For index 0: The setting value is used to finely adjust PLL line synchronization. For setting values not equal to 0, p3457[0] * p0210 is set as output voltage for pulse enable. This is especially practical for booksize devices without VSM line voltage measurement. For index 1: The setting value is used to finely adjust PLL line synchronization, and when the pulses are enabled, is added to the line angle that is measured. The value of 100% corresponds to an angle of 180 °. For index 2: When synchronizing, the linearity of the phase angle is determined in order to check the line quality, and for instance, to detect whether a phase has failed (A06205). The setting value is used to scale this linearity measured value. Setting values less than 100 % reduce the sensitivity of the line supply check, for example. A setting value of 0 % deactivates scaling.		

p3458[0...1]	Infeed PLL smoothing time / INF PLL t_smooth		
A_INF, S_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.0 [ms]	1000.0 [ms]	[0] 23.1 [ms] [1] 9.1 [ms]
Description:	Sets the smoothing time for the line supply PLL.		
Index:	[0] = Encoderless operation line supply frequency smoothing time [1] = VSM operation line supply frequency smoothing time		
Note:	It may be necessary to reduce the smoothing time for weak line supplies with high frequency fluctuations. There is otherwise a risk of brief orientation errors and the infeed could fail.		
r3460	Infeed PLL system deviation / INF PLL sys_dev		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the PLL system deviation.		
r3461	Infeed PLL system deviation after filtering / INF PLL sys_dev sm		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the PLL system deviation after filtering.		
Dependency:	Refer to: p3458		
p3462	Infeed line fault maximum time / INF line fault t		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [s]	10000.00 [s]	0.00 [s]
Description:	Sets the maximum permissible wait time for the line supply to return after identifying a line fault.		
Note:	This parameter is used to define how long alarm A06205 may be continuously present. F06200 is initiated after the wait time has expired. For p3462 = 0, the following applies: The time monitoring is deactivated. Fault F06200 is only output, if in addition to A06205, an additional message is initiated with a stop response.		

p3463	Infeed line angle change phase failure detection / INF phi ph_fail		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-180.0 [°]	180.0 [°]	15.0 [°]
Description:	If the line supply angle (angle between the line supply phases) suddenly changes by this value, then a phase failure is assumed. The pulses are then inhibited for 10 ms.		
Dependency:	Refer to: A06205		

r3467[0...3]	CO: Infeed current alpha/beta / INF I a/b		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Display and connector output for the line current in alpha/beta components.		
Index:	[0] = Alpha [1] = Beta [2] = Alpha [3] = Beta		
Note:	For index 0, 1: Displays the line current at the input terminals of the line filter. For index 2, 3: Displays the line current at the input terminals of the power unit.		

r3468[0...5]	CO: Infeed voltage alpha/beta / INF U a/b		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Display and connector output for the line supply voltage at the input terminals of the line filter in alpha/beta components.		
Index:	[0] = Alpha [1] = Beta [2] = Alpha [3] = Beta [4] = Alpha [5] = Beta		
Note:	For index 0, 1: The input terminals of the line filter form, for infeeds, the connection point of the Voltage Sensing Module (VSM) to measure the line supply voltage. For operation with VSM (p3400.5 = 1), the following applies: The voltage measured values r3661 and r3662, transformed into the alpha/beta system are displayed in r3468. For encoderless operation without VSM (p3400.5 = 0), the following applies: The estimated values of the voltages from the line supply model of the PLL transformed into the alpha/beta system are displayed in r3468. For index 2, 3: The basic fundamental amplitudes of the clocked inverter output voltages are displayed. The values are only valid when operation is enabled.		

For index 4, 5:

The basic fundamental amplitudes of the voltage source calculated using a line model are displayed.

The values are only valid when operation is enabled.

p3469[0...n]	Latch delay time correction, zero crossover detection / t_latch corr PLL		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10000.0 [µs]	10000.0 [µs]	0.0 [µs]
Description:	Calibration value for the RC filter of the zero crossover detection of the line supply voltage in the power unit. When p3469 = 0, a new calibration is performed the next time identification is carried out with p3410 = 4 or 5.		
Note:	The calibration value is stored in the EEPROM of the power unit because it is a characteristic of the power unit.		
r3470	CO: Infeed active current filter / INF I_act filter		
A_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the active current requirement due to the line filter.		
Dependency:	Refer to: r0038, p0221, p0222		
Note:	With respect to the line supply, the sum of the active currents of the power unit (p0078) and line filter (r3470) are effective. The active current demand of the line filter is taken into account when calculating the power factor (r0038). The magnitude of the line filter active current depends on the capacitance (p0221) and the resistance (p0222) of the line filter.		
r3471	CO: Infeed reactive current filter / INF I_reactiveFilt		
A_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the reactive current requirement as a result of the line filter. The reactive current requirement of a line filter is covered by the controlled infeed/regenerative feedback so that the converter always operates with a power factor of 1 compared to the line.		
Dependency:	Refer to: r0038, r0075, r0076, p0221		
Note:	With respect to the line supply, the sum of the reactive currents of the power unit (p0076) and line filter (r3471) are effective. The reactive current requirement of the line filter is taken into account when calculating the power factor (r0038). The amount of the reactive current depends on the capacitance (p0221) of the line filter that is automatically parameterized when a line filter is selected (p0220). If the line phases are reversed and the line voltage therefore has a negative orientation (r0066 < 0), it should be noted that the sign of the reactive current is reversed.		

p3472[0...4]		Line supply PLL line supply voltage smoothing time / Line PLL U_I t_{sm}	
A_INF, S_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.0 [ms]	30000.0 [ms]	[0] 200.0 [ms] [1] 100.0 [ms] [2] 5000.0 [ms] [3] 8.0 [ms] [4] 8.0 [ms]
Description:	Sets the smoothing time of the line supply voltage for the line supply PLL.		
Index:	[0] = Encoderless operation line supply voltage smoothing time [1] = VSM operation line supply voltage smoothing time [2] = Detection line supply undervoltage smoothing time [3] = Detection line supply overvoltage smoothing time [4] = Detection line supply voltage step smoothing time		
Dependency:	Refer to: p3400		
Note:	For the pre-control of the line supply voltage, a smoothed value of the line supply voltage is used in the closed-loop control. p3472[0]: Sets the PT1 time constant to smooth the line supply voltage for operation without VSM (p3400.5 = 0). p3472[1]: Sets the PT1 time constant to smooth the line supply voltage for operation with VSM (p3400.5 = 1). p3472[2]: Sets the smoothing time constant to slowly detect a line supply undervoltage (F06100). p3472[3]: Sets the smoothing time constant to quickly detect line supply undervoltages for phase failure (A06205). p3472[4]: Sets the smoothing time constant to quickly adapt the line supply pre-control for line supply voltage steps (p0286).		
p3473[0...3]		CI: cos phi display current signal source / cos phi I S_{src}	
A_INF (cos phi), R_INF (cos phi)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 8951
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	-	-	[0] 3467[0] [1] 3467[1] [2] 3467[2] [3] 3467[3]
Description:	Sets the signal source for the current for the cos phi display.		
Index:	[0] = Alpha subsystem 1 [1] = Beta subsystem 1 [2] = Alpha subsystem 2 [3] = Beta subsystem 2		
Dependency:	Refer to: r3467		
Note:	Using p3475.1, the signal source format can be converted over from alpha/beta space vector coordinates to a 3-conductor representation. With this setting, measured values from the Voltage Sensing Module (VSM) can be directly interconnected (e.g. r5471[0]). For index 0: Current alpha (current phase 1) for r3478[0] space vector 1. For index 1: Current beta (current phase 2) for r3478[0] space vector 1. For index 2: Current alpha (current phase 1) for r3478[1] space vector 2. For index 3: Current beta (current phase 2) for r3478[1] space vector 2.		

p3474[0...3]		CI: cos phi display voltage signal source / cos phi U S_src			
A_INF (cos phi), R_INF (cos phi)	Can be changed: T	Calculated: -	Access level: 3		
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 8951		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: p2001	Expert list: 1		
	Min	Max	Factory setting		
	-	-	[0] 3468[0]		
			[1] 3468[1]		
			[2] 3468[2]		
			[3] 3468[3]		
Description:	Sets the signal source for the voltage for the cos phi display.				
Index:	[0] = Alpha subsystem 1 [1] = Beta subsystem 1 [2] = Alpha subsystem 2 [3] = Beta subsystem 2				
Dependency:	Refer to: r3468				
Note:	Using p3475.1, the signal source format can be converted over from alpha/beta space vector coordinates to a 3-conductor representation. With this setting, measured values from the Voltage Sensing Module (VSM) can be directly interconnected (e.g. r5461[0]). For index 0: Voltage alpha (voltage phase-phase 12) for r3478[0] space vector 1. For index 1: Voltage beta (voltage phase-phase 23) for r3478[0] space vector 1. For index 2: Voltage alpha (voltage phase-phase 12) for r3478[1] space vector 2. For index 3: Voltage beta (voltage phase-phase 23) for r3478[1] space vector 2.				
p3475[0...1]		cos phi display configuration / cos phi config			
A_INF (cos phi), R_INF (cos phi)	Can be changed: T	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8951		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the configuration for the cos phi display.				
Index:	[0] = Space vector 1 [1] = Space vector 2				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	cos phi display activation	ON	OFF	-
	01	Signal sources in 3-conductor coordinates	Yes	No	-
	02	Signal source phase sequence negated (negative frequency)	Yes	No	-
Note:	For bit 00: For p3475[0].0 = 1 the values in r3477[0] and p3478[0] are updated. For p3475[1].0 = 1 the values in r3477[1] and p3478[1] are updated. For bit 01: For p3475.1 = 0, the following applies: The format of the signal source in p3473 and p3474 is interpreted as alpha/beta space vector coordinates. For p3475.1 = 1, the following applies: The format of the signal source in p3473 and p3474 is interpreted as 3-conductor representation. For bit 02: When the bit is activated, the phase sequence of the signal source, interconnected via connector inputs p3473 and p3474, is negated with respect to the signals at the inputs of the infeed. For example, this is the case for a transformer with a phase rotation of 180 ° and the corresponding tapping of the signals.				

2 Parameters

2.2 List of parameters

For p3475.2 = 0, the following applies:

The phase sequence of the signal source in p3473 and p3474 is not negated.

For p3475.2 = 1, the following applies:

The phase sequence of the signal source in p3473 and p3474 is negated.

p3476[0...1]	cos phi display smoothing time / cos phi t_smooth		
A_INF (cos phi), R_INF (cos phi)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8951
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	2000.00 [ms]	200.00 [ms]
Description:	Sets the smoothing time for the cos phi display.		
Index:	[0] = Space vector 1 [1] = Space vector 2		
r3477[0...1]	CO: cos phi display actual value sign / cosphi actVal sign		
A_INF (cos phi), R_INF (cos phi)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8951
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for the sign of the offset factor (cos phi). The offset factor cos phi is defined as the cosine of the phase angle between the sinusoidal oscillations of the voltage and the current of the fundamental frequency.		
Note:	The following definition of the signs corresponds with that used in the relevant standards relating to line supplies (e.g. VDE-AR-4105). For under-excited operation (negative reactive current: r0076 < 0), the following applies: Lower output voltage or lagging current is identified with a positive sign. For over-excited operation (positive reactive current: r0076 > 0), the following applies: Higher output voltage or leading current is identified with a negative sign.		
r3478[0...1]	CO: cos phi display absolute actual value / cos phi actVal abs		
A_INF (cos phi), R_INF (cos phi)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8951
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for the absolute value of the offset factor (cos phi). The offset factor cos phi is defined as the cosine of the phase angle between the sinusoidal oscillations of the voltage and the current of the fundamental frequency.		
Index:	[0] = Space vector 1 [1] = Space vector 2		
Notice:	The current and voltage signals must come from the same line supply to which the Active Line Module is connected (identical line frequency). p3475.2 can be used to compensate if the phase sequence is reversed with respect to the Active Line Module connection terminals.		

p3479[0...1]	cos phi display current measurement dead time / cosphi I_m t_dead		
A_INF (cos phi), R_INF (cos phi)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10000.000 [µs]	10000.000 [µs]	620.000 [µs]
Description:	Sets a dead time for the current measurement. This means that a calibration of the current measuring instant ensures a precise cos phi measurement in 3-conductor coordinates.		
Index:	[0] = Space vector 1 [1] = Space vector 2		
Notice:	A calibration is only required for signal sources in 3-conductor coordinates (p3475.1 = 1).		
Note:	A calibration value can be checked as follows: 1. Set p3473[0, 1] = p3467[2, 3], configuration p3475[0] = 1. 2. Determining a cos phi reference value. 3. Set p3473[2, 3] = p3671, p3672, configuration p3475[1] = 3. 4. When the calibration value has been correctly set, both indices of the "cos phi display absolute actual value" p3478[0, 1] should have the same value.		
p3480	Infeed modulation depth limit / INF mod_depth lim		
A_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8940
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.0 [%]	110.0 [%]	97.0 [%]
Description:	Sets the maximum steady-state modulation depth. When this limit is reached, the DC link voltage is boosted to maintain the control margin. This means that the control reserve is maintained.		
Dependency:	Refer to: p3481, r3485		
p3481	Infeed standby controller dynamic response / INF res_ctrl dyn		
A_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8940
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [ms]	1000.0 [ms]	7.5 [ms]
Description:	Sets the dynamic response of the reserve controller for the modulation depth. As the smoothing time increases, the response of the DC link voltage tracking becomes slower.		
Dependency:	Refer to: p3480, r3485		

2 Parameters

2.2 List of parameters

r3485	Infeed standby controller output / INF res_ctrl outp		
A_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8940
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the reserve controller output for the modulation depth. The DC link voltage is increased by this voltage value - the summed setpoint for the DC link voltage is output in r0088. The summed setpoint is limited to the maximum steady-stage DC link voltage (p0280).		
Dependency:	Refer to: p3480, p3481		

p3490	Infeed delay time OFF1 command / INF t_del OFF1		
A_INF, S_INF, R_INF, B_INF	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8732, 8832, 8932
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [ms]	1000000.0 [ms]	0.0 [ms]
Description:	Sets the delay time for the ON/OFF1 command of the infeed. After ON/OFF1 = 0 the infeed remains in operation for the specified time		
Dependency:	Refer to: p0840		
Notice:	The ON/OFF1 command of the infeed can be interrupted.		
Note:	This parameter is only relevant if a Motor Module and the infeed are controlled by the same OFF command. In this case, the delay time and the stop ramp time of the motor can be coordinated with one another.		

p3491	Infeed I-offset measurement monitoring time / INF I_offs t_monit		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8832, 8932
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	65000 [ms]	2000 [ms]
Description:	Sets the monitoring time for the current-offset measurement of the power unit. The time is started with the normal end of the measurement. If the measurement is invalid and if no valid measurement can be taken within the monitoring period (phase currents too high), an appropriate message is generated.		
Note:	Set this parameter to 0 to allow variations in the delay when running-up.		

p3492	Infeed, line supply undervoltage delay time / INF U_line t_del		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [s]	300 [s]	0 [s]
Description:	Sets the delay time for shutdown due to a line supply undervoltage condition (F06100). After the line supply undervoltage is detected, the power unit is tripped (shut down) after this delay time has expired. If, during this delay time, the line supply undervoltage is no longer detected, then the power unit is not shut down. While the closed-loop control is being synchronized to the line supply (r3402 = 7) the delay time p3492 is not effective.		

Dependency:	Refer to: p0283 Refer to: F06100
Note:	The degree of ruggedness of the infeed with respect to fluctuations in the line supply voltage can be increased by parameterizing this delay value. However, the following should be noted: <ul style="list-style-type: none"> - the infeed power decreases proportionally (linearly) with the line supply voltage. - when other components are connected, for low line supply voltage, operating faults or damage can occur. In this case, the specifications of the connected electrical components should always be carefully observed.

r3496[0...1]	CO: cos phi display actual value / cospfi disp ActVal		
A_INF (cos phi), R_INF (cos phi)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8951
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for offset factor cos phi. The offset factor cos phi is defined as the cosine of the phase angle between the sinusoidal oscillations of the voltage and the current of the fundamental frequency.		
Index:	[0] = Space vector 1 [1] = Space vector 2		
Notice:	The current and voltage signals must come from the same line supply to which the Active Line Module is connected (identical line frequency). p3475.2 can be used to compensate if the phase sequence is reversed with respect to the Active Line Module connection terminals.		

p3508	Infeed step-up factor maximum / Step-up factor max		
A_INF, R_INF	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.60	3.00	1.60
Description:	Sets the maximum permissible step-up factor for the power unit used in conjunction with the line filter parameterized in p0220[0].		
Dependency:	Refer to: p0210, p0220, p3510		
Note:	The maximum step-up factor determines the maximum ratio between the DC link voltage setpoint (p3510) and the unit supply voltage (p0210). The input of the DC link voltage setpoint (p3510) is limited corresponding to the permissible step-up factor (p3508): $p3510 \leq p0210 * p3508$. Pre-setting values: 380 ... 480 V booksize units without Active Interface Module: 1.60 380 ... 480 V booksize units with Active Interface Module (p0220 = 41 ... 45): 2.00 380 ... 480 V chassis units: 2.00 500 ... 690 V chassis units: 2.00 Maximum values: 380 ... 480 V booksize units without Active Interface Module: 1.60 380 ... 480 V booksize units with Active Interface Module (p0220 = 41 ... 45): 2.00 380 ... 480 V chassis units: 2.00 500 ... 690 V chassis units: 2.00 When the filter setting (p0220) is changed, then the setting of the maximum step-up factor (p3508) is also automatically adapted.		

2 Parameters

2.2 List of parameters

p3510	Infeed DC link voltage setpoint / INF Vdc setp		
SERVO (Tech_ctrl), SERVO_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), A_INF, R_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 100.00 [V]	Calculated: - Dyn. index: - Unit group: 5_2 Scaling: p2001 Max 1600.00 [V]	Access level: 2 Func. diagram: 8910, 8940 Unit selection: p0505 Expert list: 1 Factory setting 600.00 [V]
Description:	Sets the setpoint for the DC link voltage.		
Dependency:	Refer to: p0210, p0280, p3400, p3508, p3511		
Warning:	Before increasing the voltage limit for pulsed operation of a controlled booksize infeed with line supply voltages p0210 > 415 V it should be checked whether the motors connected to the DC link are specified for the higher motor voltages.		
	The warning information associated with p0210 must be carefully observed.		
Note:	When the Smart Mode is activated (p3400.0 = 1) the DC link voltage is not regulated, i.e. the value entered here is in this case not effective. The permissible range of the DC link voltage depends on the parameterized unit supply voltage (p0210) and the permissible, maximum continuous DC link voltage (p0280). In voltage-controlled operation (p3400.0 = 0) the following applies: p3510 >= 1.42 * p0210 and p3510 <= p3508 * p0210 and p3510 <= p0280. In the Smart Mode (p3400.0 = 1) the following applies: The setpoint p3510 for the DC link voltage control is inactive. In order to permit an adapted display, deviating from voltage-controlled operation, the lower limit p3510 is >= 1.2 * p0210.		

p3510	DC link voltage setpoint / Vdc setp		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 100.00 [V]	Calculated: - Dyn. index: - Unit group: 5_2 Scaling: p2001 Max 1600.00 [V]	Access level: 2 Func. diagram: 7960 Unit selection: p0505 Expert list: 1 Factory setting 600.00 [V]
Description:	Sets the setpoint for the DC link voltage on the motor side.		

p3511	CI: Infeed DC link voltage supplementary setpoint / INF Vdc Z_set		
SERVO (Tech_ctrl), SERVO_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), A_INF, R_INF	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max -	Access level: 3 Func. diagram: 8940 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the supplementary setpoint for the DC link voltage.		
Dependency:	Refer to: p3510		

p3511	CI: DC link voltage supplementary setpoint / Vdc Z_set		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max -	Access level: 3 Func. diagram: 7960 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the supplementary setpoint for the DC link voltage on the motor side.		
Dependency:	Refer to: p3510		

p3513	BI: Voltage-controlled operation inhibit / U_ctrl op inhib		
SERVO (Tech_ctrl), SERVO_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8940 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for inhibiting the voltage-controlled mode of the infeed.		
Dependency:	Refer to: p3400, r3405		
Notice:	The DC link voltage must be controlled by a different component at the DC link; otherwise this results in an overvoltage or undervoltage condition.		
Note:	Parameter being prepared. For this firmware version, the technology controller "DC link voltage controller" is not supported. The current controller remains active and can be controlled by means of its setpoint inputs (p3515, p3610). This binector input is used to change over between master operation (0 signal) and slave operation (1 signal) operation and vice versa.		

p3513	BI: Voltage-controlled operation inhibit / U_ctrl op inhib

Description:	Sets the signal source for the scaling of the current limit when motoring (p3530) to limit the line active current.		
Dependency:	Refer to: p3530		
Note:	The effective current limit is given by the product of p3530 * CI: p3528 .		
p3529	CI: Infeed current limit regenerative scaling / INF I_lim gen scal		
A_INF, R_INF	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: 8940 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for the scaling of the current limit when generating (p3531) to limit the line active current.		
Dependency:	Refer to: p3530		
Note:	The effective current limit is given by the product of p3531 * CI: p3529.		
p3530	Infeed current limit motoring / INF I_lim mot		
A_INF, R_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 1.00 [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: - Max 100000.00 [Arms]	Access level: 3 Func. diagram: 8940 Unit selection: p0505 Expert list: 1 Factory setting 10000.00 [Arms]
Description:	Sets the motoring limit for the active line current. The currently effective current limit is displayed in r0067[0].		
Dependency:	Refer to: r0067, p3532		
Notice:	<p>If this limit is selected lower than the maximum current permissible for the power unit (r0067), the infeed can no longer provide its full controlled power. Operating faults of the infeed can occur due to the resulting DC link undervoltage.</p> <p>For self-commutated infeeds, the DC link voltage decreases if more power is drawn from the DC link by the connected load than can be supplied by the line because of the power unit maximum current or a limit in p3530. If the DC link voltage decreases down to the rectified value, then the complete current - necessary to cover the required active power - flows, uncontrolled into the rectifier circuit via the diodes.</p>		

This is the reason that, for physical reasons, the value in p3530 cannot act as current limit that is always maintained. The value forms a current threshold from which point onwards the DC link energy is used as buffer for brief power fluctuations.

Note: If Smart Mode is activated (p3400.0 = 1), the setting in this parameter is not active.

p3531	Infeed current limit regenerative / INF I_limit regen		
A_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8940
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100000.00 [Arms]	-1.00 [Arms]	-10000.00 [Arms]
Description:	Sets the limit for the active line supply current when regenerating. The currently effective current limit is displayed in r0067[1].		
Dependency:	Refer to: r0067, p3533		
Notice:	If this limit is selected lower than the maximum current permissible for the power unit (r0067), the infeed can no longer provide its full controlled power. This can result in an overvoltage condition in the DC link. For self-commutated infeeds, the DC link voltage increases if more power is input to the DC link through the connected source than can be fed to the line because of the maximum power unit current or a limit in p3531 If the DC link voltage exceeds the permissible threshold (p0297), defined by the hardware, then the unit is tripped due to overvoltage. The value in p3531 represents a current limit that is always maintained - however, this can result in overvoltage conditions in the DC link. The value in p3531 represents a current limit from which point onwards the capacitance of the DC link can be used as buffer for brief power fluctuations.		
Note:	If Smart Mode is activated (p3400.0 = 1), the setting in this parameter is not active.		

p3532	BI: Infeed inhibit motoring / INF mot mode inhib		
A_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 8920
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for inhibiting the motor mode of the infeed.		
Dependency:	Refer to: r3405, p3530		
Notice:	If the motor mode is inhibited although power is withdrawn from the DC link, then the DC link voltage drops to the rectified value. In this state, the DC link is post-charged through the diodes and motoring power is fed to the power unit in spite of the motoring inhibit. The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The inhibit only becomes active after operation has been enabled and the Vdc has been ramped up (r0863.0 = 1). If Smart Mode is activated (p3400.0 = 1), the setting in this parameter is not active.		

p3533	BI: Infeed inhibit generator mode / INF gen mode inhib		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 8820, 8920
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to inhibit the generator mode of the infeed.		
Dependency:	Refer to: r3405, p3531		

2 Parameters

2.2 List of parameters

Notice: The DC link voltage will increase if generator mode is inhibited even though power is being regenerated into the DC link.

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The inhibit only becomes active after operation has been enabled and the Vdc has been ramped up (r0863.0 = 1).

r3534	Infeed line filter maximum current / INF filter I_{max}		
A_INF, R_INF	Can be changed: -	Calculated: -	Access level: 2

p3555[0...5] Infeed Vdc controller integral component fast intervention / Vdc_ctr I-compFast

A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	200.00 [%]	[0] 2.00 [%] [1] 102.00 [%] [2] 0.00 [%] [3] 5.00 [%] [4] 100.00 [%] [5] 0.00 [%]

Description: Sets the fast Vdc controller intervention for a step-like decrease of the DC link voltage due to a high motor load of the infeed.

The Vdc controller fast intervention is deactivated for p3555[5] = 0 % or p3560 < 100% or p0225 > 0.5 * p0223.
For a line supply and DC link identification (p3410 >= 2) the level of the fast controller intervention (p3555[2]) is automatically adapted to the line supply inductance.

Recommendation: Precise system knowhow is required when correctly changing this parameter!

- generally, the fast controller intervention is used to improve the control behavior for high-speed load changes. The function can therefore always be deactivated with p3555[5] = 0 % if no peak load duty cycles are required in the application.

- using p3555[0], the calculation of the modulation depth is determined in the case of high system deviations also when the controller intervention is deactivated. This is the reason that p3555[0] should generally not be changed.

2 Parameters

2.2 List of parameters

Index: [0] = Intervention threshold 1: Vdc deviation from the setpoint
 [1] = Intervention threshold 2: Vdc difference to the rectified value
 [2] = Fast intervention automatic scaling
 [3] = Fast intervention pre-control
 [4] = Fast intervention timeout
 [5] = Fast intervention manual scaling

Note: p3555[0]:
 Vdc system deviation as a percentage of the setpoint of the DC link voltage (first condition to initiate fast controller intervention). The threshold is also used to internally change over the modulation depth calculation for high system deviations and should therefore generally not be changed!

p3555[1]:
 Vdc threshold as a percentage of the rectified value of the actual line supply voltage (second condition to initiate the fast controller intervention). Both threshold conditions must be fulfilled to initiate the controller intervention.

p3555[2]:
 Percentage overall level of the fast intervention (scaling factor). For a line supply identification with p3410 >= 2, the factor is automatically adapted or, for weak line supplies with a high inductance, set to 0.

p3555[3]:
 Percentage correction of the pre-control for a fast voltage dip (dead time compensation).

p3555[4]:
 Percentage minimum time between two controller interventions (100% corresponds to 100 ms). If high load change frequencies occur with the application, the minimum time between two controller interventions can be reduced using p3555[4].

p3555[5]:
 Percentage overall level of the fast intervention (scaling factor). With p3555[5] = 0, the fast controller intervention is inhibited. For weak line supplies with a high inductance, it makes sense to deactivate the fast intervention.

p3560	Infeed Vdc controller proportional gain / INF Vdc_ctrl Kp		
SERVO (Tech_ctrl), SERVO_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), A_INF, R_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.01 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000.00 [%]	Access level: 2 Func. diagram: 8940 Unit selection: - Expert list: 1 Factory setting 100.00 [%]

Description: Sets the scaled proportional gain for the DC link voltage controller (Vdc controller).
Note: A value of 100 % corresponds to the basic setting derived from loop control parameters (p3421, p3422).

Description: Sets the scaled proportional gain for the DC link voltage controller (Vdc controller).
Note: A value of 100% corresponds to the basic setting derived from the loop control parameter (p3422).

p3561	CI: Infeed Vdc controller proportional gain scaling / INF Vdc ctr Kpscal		
A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: 8940 Unit selection: - Expert list: 1 Factory setting 1

Description: Sets the signal source for scaling the proportional gain for the DC link voltage controller (Vdc controller).
Dependency: Refer to: p3560

Note: The total, effective gain is given by the product p3561 * p3560.
Internally, this product is limited to values greater than 0.01.

p3562	Infeed Vdc controller integral time / INF Vdc_ctrl Tn		
SERVO (Tech_ctrl), SERVO_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), A_INF, R_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.10 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100000.00 [%]	Access level: 2 Func. diagram: 8940 Unit selection: - Expert list: 1 Factory setting 100.00 [%]

Description: Sets the scaled integral time for the DC link voltage controller (Vdc).

Note: A value of 100 % corresponds to the basic setting derived from loop control parameters (p3421, p3422).

p3562	Vdc controller integral time / Vdc_ctrl Tn		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.10 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100000.00 [%]	Access level: 2 Func. diagram: 7960 Unit selection: - Expert list: 1 Factory setting 100.00 [%]

Description: Sets the scaled integral time for the DC link voltage controller (Vdc).

Note: A value of 100% corresponds to the basic setting derived from the loop control parameter (p3422).

p3564	Infeed Vdc monitor time constant / INF Vdc monit T		
A_INF, R_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100.0 [ms]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.2 [ms]

Description: Sets the filter time constant for the DC link voltage monitor (Vdc).

p3566	Infeed Vdc ramp duration / INF Vdc t_ramp		
A_INF, R_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 40 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000 [ms]	Access level: 2 Func. diagram: 8932 Unit selection: - Expert list: 1 Factory setting 100 [ms]

Description: Sets the ramp time for the DC link voltage (Vdc) when switching on and switching off.
Switching on (pulses enabled, r0898.3 = 1):
During this time, the DC link voltage is increased from the rectifier value after precharging to the voltage setpoint (p3510, p3511). The voltage setpoint is increased, when necessary, so that the modulation depth reserve (p3481) is maintained. The reactive current is set to the value 0 while ramping.
Switching off (inhibit pulses, r0898.3 = 0):
During this time, the DC link voltage is reduced to the rectified value ($\sqrt{2}$ * line supply voltage). The reactive current value is set to the value 0 when the ramp starts.

2 Parameters

2.2 List of parameters

p3570	CI: Master/slave active current setpoint / I_act_setp		
A_INF (Master/Slave), R_INF (Master/Slave)	Can be changed: T	Calculated: -	Access level: 3

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]

Description: Display and connector output for the multiplexer output value.

The signal value is used as standard for the current distribution factor for the infeed master slave operation.

Dependency: Refer to: p3576, p3577, p3579

Note: If the multiplexer for the master/slave is not required, then it can also be used for another function.

p3579 **CI: Master/Slave current distribution factor / I_dist_factor**

A_INF (Master/Slave), R_INF (Master/Slave)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 8940
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	3578[0]

Description: Sets the factor to be multiplied by the active current setpoint for the current controller.

For a master/slave infeed configuration, the value reduced in this way can be distributed to the slave axes. The overall gain from the perspective of the voltage controller remains the same.

Dependency: Refer to: p3576, p3577, r3578

r3602 **Infeed control status / INF ctrl state**

A_INF, R_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	8	-

Description: Displays the status of the closed-loop infeed control.

Value:

- 0: Initialization running
- 1: Pulse enable missing
- 2: Ramp-up DC link voltage
- 3: Ramp-up reactive current
- 4: Shutdown running
- 5: Reset identification

- 6: Operation
7: Identification running
8: Smart Mode running

p3603	Infeed current pre-control factor D component / INF I_ctrl D-comp		
A_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8946
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	500.00 [%]	100.00 [%]

Description: The D component of the current pre-control is determined from the device data of the filter. p3603 can be used to weigh the pre-calculated D component. If no dynamic pre-control is to be used, set the factor to zero.

p3604	CI: Infeed current pre-control factor D component scaling / INF I_ctrl D scale		
A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)	Can be changed: T	Calculated: -	Access level: 3

	- [Arms]	- [Arms]	- [Arms]

Description: Displays the system deviation of the reactive current controller.

2 Parameters

2.2 List of parameters

p3610	Infeed reactive current fixed setpoint / INF I_reactv F_set		
A_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8910, 8946
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10000.0 [Arms]	10000.0 [Arms]	0.0 [Arms]
Description:	Sets the fixed setpoint for the reactive current. The permissible maximum absolute value for the reactive current is the device rated current r0207. The following applies: p3610 <= r0207		
Dependency:	Refer to: r0029, r0075, r0076		
Notice:	If the line phases are reversed and the line voltage therefore has a negative orientation (r0066 < 0), it should be noted that the sign of the reactive current is also reversed. The negated value of p3610 is effective in display parameters r0029, r0075, r0076 as appropriate.		
Note:	p3610 < 0: Inductive reactive current is produced, i. e. the current follows the voltage. p3610 > 0: Capacitive reactive current is produced, i. e. the current leads the voltage. This definition applies to 3AC voltage systems both with positive rotational orientation (r0066 > 0) and for negative rotational orientation (r0066 < 0).		
p3611	CI: Infeed reactive current supplementary setpoint / INF I_react Z_set		
A_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 8946
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the supplementary setpoint of the reactive current.		
p3612	CI: Infeed reactive power precontrol / INF P_react prectr		
A_INF (Dyn. grid support), R_INF (Dyn. grid support)	Can be changed: U, T	Calculated: -	Access level: 2

	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the precontrol of the reactive power.		
Dependency:	Refer to: p3520		
p3614[0...2]	Infeed current actual value filter smoothing time / INF I_act t_sm		
A_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8950
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [ms]	2.000 [ms]	0.000 [ms]
Description:	Sets the time constant for the PT1 filtering of the active current actual value and reactive current actual value.		
Index:	[0] = Current actual value smoothing with dead time [1] = Current actual value smoothing without dead time [2] = System deviation smoothing without dead time		

Note: The current actual value filter is deactivated with p3614[0, 1, 2] = 0.
 For index 0:
 The PT1 filter with a clock cycle dead time can be used to stabilize the closed-loop current control for extremely weak line supplies (with higher relative short-circuit voltage uk).
 For an automatic controller setting with p3410 >= 2, the current actual value filter is automatically pre-set.
 For index 1:
 The PT1 filter without dead time can be used to optimize the closed-loop current control (e.g. in conjunction with frequency wobulation).
 For index 2:
 The PT1 filter without dead time for the system deviation (r3606, r3608) can be used to stabilize the closed-current control for weak line supplies (with low line fault rating).

p3615	Infeed current controller P gain / INF I_ctrl Kp		
A_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8946
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the scaled P gain for closed-loop current control of the infeed.

Note: A value of 100 % corresponds to the basic setting derived from loop control parameters (p3421, p3422).

p3616	CI: Infeed current controller P gain scaling / INF I_ctrl Kp scal		
A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for scaling the proportional gain of the current controller.

Dependency: Refer to: p3615

Note: The total, effective gain is given by the product p3616 * p3615.
 Internally, this product is limited to values greater than 0.

p3617	Infeed current controller integral time / INF I_ctrl Tn		
A_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8946
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.10 [%]	100000.00 [%]	100.00 [%]

Description: Sets the scaled integral time for the infeed current controller.

Note: A value of 100 % corresponds to the basic setting derived from loop control parameters (p3421, p3422).

r3618	Infeed active current controller integral component / INF I_act_ctrl Tn		
A_INF, R_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8946
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the integral component of the active current controller.

r3619	Infeed reactive current controller integral component / INF I_reactv_ctrTn		
A_INF, R_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8946
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the integral action component of the reactive current controller.		
p3620	Infeed current controller adaptation lower switch-in threshold / INF I_adpt thr low		
A_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	100.00 [%]	40.00 [%]
Description:	Sets the switch-in threshold for the current controller adaptation. The value refers to the maximum power unit current (r0209). From the starting threshold onwards, the inductance value (p3421) used for current control is reduced linearly as a function of the current value. The inductance value for the maximum power unit current is therefore p3421 * p3622.		
Dependency:	Refer to: p3410, p3415, p3622		
Note:	The parameter can be set automatically using the line supply identification (p3410 = 4, 5) (also refer to p3622). Prerequisite for a reliable measurement of p3622 is that the current magnitude for run 2 (p3415[1]) is at least 10 % higher than the current magnitude for run 1 of the line supply identification. Otherwise, the measurement result is rejected. In the case of a correct measurement, p3620 is set to 80% of the current magnitude for run 1 (p3415[0]). For chassis power units, it is generally not necessary to adapt p3620 and p3622 to the characteristics of the line supply. However, when required, the current controller adaptation can be optimized by selecting suitable current magnitudes for p3415. For booksize power units, p3620 and p3622 are automatically adapted with the then valid factory setting of the line identification p3415.		
p3622	Infeed current controller adaptation reduction factor / INF I_adapt factor		
A_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.01 [%]	100.00 [%]	85.00 [%]
Description:	Sets the inductance of the line reactor at the maximum power unit current (r0209) as a percentage of the inductance (p3421) at the application threshold (p3620).		
Dependency:	Refer to: p3410, p3415, p3620		
Note:	The parameter for a line supply identification (p3410 = 4, 5) automatically optimized, if the following applies: p3415[1] - p3415[0] > 10 % Otherwise, the measurement result is rejected. For chassis power units, it is generally not necessary to adapt p3620 and p3622 to the characteristics of the line supply. However, when required, the current controller adaptation can be optimized by selecting suitable current magnitudes for p3415. For booksize power units, p3620 and p3622 are automatically adapted with the then valid factory setting of the line identification p3415.		

p3624[0...1]	Infeed harmonics controller order / INF harm_ctr order		
A_INF, R_INF	Can be changed: T Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: - Min 5	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max 13	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 5 [1] 7
Description:	Sets the Order of the line harmonics for the current harmonics controller. p3624[0]: Order of the line harmonics for the first harmonics controller. p3624[1]: Order of the line harmonics for the second harmonics controller.		
Dependency:	Refer to: p3625, r3626		
Note:	Harmonics in the line supply voltage can cause harmonics in the converter current. These types of current harmonics can be reduced by activating additional controller modules. Example: For a 50 Hz line supply harmonics at 250 Hz in the phase currents can be reduced by activating a harmonic controller with Order 5 (p3624[0] = 5).		
p3625[0...1]	Infeed harmonics controller scaling / INF harm_ctrl scal		
A_INF, R_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max 300.0 [%]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the gain of the harmonics controller. p3625[0]: Gain of the first harmonics controller p3625[1]: Gain of the second harmonics controller 0 %: Controller is deactivated 100 %: Controller is activated with default gain setting		
Dependency:	Refer to: p3624, r3626		
Note:	The harmonics controller corrects the power unit voltages so that the line-side current harmonics are reduced. The order of a current harmonic, that is to be dampened using a harmonics controller, is defined using p3624.		
r3626[0...1]	Infeed harmonics control output / INF harm_ctrl outp		
A_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [Vrms]	Calculated: - Dyn. index: - Unit group: 5_1 Scaling: - Max - [Vrms]	Access level: 2 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [Vrms]
Description:	Displays the output voltages of the harmonics controller. r3626[0]: rms value of the 5th harmonic of the controller output voltage r3626[1]: rms value of the 7th harmonic of the controller output voltage The harmonics controller corrects the power unit voltages so that the line-side current harmonics are reduced.		
Dependency:	Refer to: p3624, p3625		

r3632

	- [°]	- [°]	- [°]
Description:	Display and connector output for the angle of the input voltage (relative to the line supply angle).		
p3636[0...2]			
CI: Negative phase-sequence system controller phase current scaling / Neg_sys_ctr ph sc			
A_INF (Dyn. grid support), R_INF (Dyn. grid support)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for scaling the phase current using the negative phase-sequence system controller. Setpoints not equal to 0 result in shifting the corresponding phase currents to the two other phases. As a consequence, an identical scaling value for all 3 phases does not result in a change in the current.		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W		
Caution:	 Unequal scaling values result in an oscillating line power and therefore in voltage fluctuations in the DC link and unsymmetrical line supply load. As a consequence, additional thermal losses occur in the inverter Further, this can have a negative impact on adjacent systems and components - or even damage them. Depending on the magnitude of the asymmetry, increased harmonics can occur in the phase currents. It may be necessary to increase the capacitance in the DC link to reduce the amplitude of the DC link voltage fluctuations.		

- Notice:** The phase current scaling requires the calculation of the line voltage negative-phase sequence system (p5500.3 = 1). Grid support (p5501) can be activated or deactivated.
Internally, the value range of p3636 is limited depending on p3527.
The following applies to the maximum absolute value of the scaling value:
 $(100\% - p3527) * 2$
The complete value range [-1, 1] assumes that p3527 is set $\leq 50\%$. For p3527 = 100%, p3636 is not effective.
Contrary to entering setpoint pointers (p3641), the phase current scaling becomes active with p3636 after the dynamic grid support has entered a setpoint (p5506, p5509). As a consequence, dynamic grid support is influenced by p3636.
- Note:** The scaling signals are internally limited by the value range [-1, 1].
Example:
p3636[0] = 1 signal (corresponds to 100%) results in a reduction of the current setpoint in phase U to approximately 0, if the following applies:
p3636[1] = p3636[2] = 0 signal
The current amplitudes of the two other phases V and W are then symmetrically increased by 50%.
The setpoints r5510[4, 6] and the negative phase-sequence system setpoint pointer calculated using p3636 are added.

r3637[0...3] CO: Negative phase-sequence system controller current setpoint / Neg_seq_ctrl I_set

Description: Display and connector output for the current actual values of the negative phase-sequence system controller.
The setpoint for the positive phase-sequence system current is compensated in the displayed negative-phase sequence system current.
The setpoint for the negative phase-sequence system current is compensated in the displayed positive-phase sequence system current.

Index: [0] = Negative phase-sequence system component active current
[1] = Negative phase-sequence system component reactive current
[2] = Positive phase-sequence system component active current
[3] = Positive phase-sequence system component reactive current

Note: The total active current actual value in the positive phase-sequence system coordinates is displayed in r0078.
The total reactive current actual value in the positive phase-sequence system coordinates is displayed in r0076.

p3639[0...3]	Negative phase-sequence system controller scaling values / Neg_sys_ctrl scal		
A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 300.00 [%]	Access level: 3 Func. diagram: 7987 Unit selection: - Expert list: 1 Factory setting [0] 100.00 [%] [1] 0.10 [%] [2] 200.00 [%] [3] 1.00 [%]

Description: Sets the scaling values for the negative phase-sequence system controller.

Index:
 [0] = Integral time
 [1] = Integrator feedback coupling
 [2] = DC link voltage extrapolation
 [3] = DC link voltage filter

Note:
 For index 0:
 The value 100% corresponds to the integral time, which is active for the regular positive phase-sequence system current controller (p3617).
 With p3639[0] = 0, the integral component of the negative phase sequence system controller is deactivated.
 For index 1:
 Sets an integrator feedback loop, which, for values greater than 0, results in a PT1 response. In the control, instead of an integrator, a 1st order delay element with time constant $[-p0115[0] / \ln(1 - p3639[1])]$ is active. This allows the negative phase-sequence system controller stability range to be extended.
 Internally, the setting value is limited to 10 %.
 We only recommend that this parameter is changed if stability problems are encountered. Typical setting values are in the range of 1%.
 For index 2:
 Sets the extrapolation width for the actual value of the DC link voltage to compensate for Vdc oscillation. A value of 100% corresponds to an extrapolation of one current controller sampling time (p115[0]).
 The extrapolated value is displayed in r3643[1].
 For index 3:
 Sets the scaling factor for the Vdc actual value filter.
 At twice the line supply frequency, this component of the Vdc oscillation can pass through the bandstop and causes the Vdc controller to respond. As a consequence, the stability of the overall closed-loop control can be improved.
 The setting values are internally limited to 100%.

p3640	Negative phase-sequence system controller configuration / Neg_sys_ctr config		
A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)	Can be changed: U, T Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 7987 Unit selection: - Expert list: 1 Factory setting 0000 bin

Description: Sets the configuration for the negative phase-sequence system current controller.

Recommendation: Setting p3640 = 7 is recommended if the emphasis is not on correcting current asymmetry, but on identifying high-ohmic line supply phase failures.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Negative phase-sequence system current controller activated	Yes	No	-
	01	Asymmetry monitoring activated	Yes	No	-
	02	Output limiting activated	Yes	No	-

Note:
 For bit 00:
 The negative phase-sequence system controller controls negative phase-sequence components in the line current. For asymmetry in the line supply, this means that current harmonics with 2x the line frequency can be compensated.

For bit 01:

Only active for bit 0 = 1.

For bit 1 = 1, the following applies:

The smoothed amplitude of the controller output is monitored, and when a threshold is exceeded (p3647[1]) an alarm is output (A06208) - and the signal bit for phase failure is set (r3405.2 = 1).

When compared to passive monitoring, this negative phase-sequence system control represents active phase failure detection; even under no load conditions, it can be guaranteed that single-phase, high-ohmic line supply faults are detected.

For bit 02:

Only active for bit 0 = 1.

For bit 2 = 1, the following applies:

In the case of high-ohmic line supply faults (e.g. phase failure), the line asymmetry that occurs can result in a significant increase in the controller integral components, and as a consequence in a fault shutdown (e.g. fault F06200).

If these types of line supply faults are to be ridden through without shutdown (as far as is possible), then the controller output voltage limiting must be activated (threshold p3647[0]).

In conjunction with active monitoring (bit 1), for example, after A06208 is output, a higher-level control can initially stop the drives in a controlled fashion and then switch-off the Active Infeed.

p3641[0...1]

0

Description:

Sets the signal source for the setpoint pointer of the negative phase-sequence system current controller.

Index:

[0] = Active
[1] = Reactive

Warning:

Setpoints not equal to zero result in an oscillating line power and therefore in voltage fluctuations in the DC link and unsymmetrical line supply load.

Note:

When the function module "dynamic grid support" (r0108.7 = 1) is activated, the following applies:
The setpoints r5510[4, 6] and the setpoints of the signal source are summed.

p3647[0...2]	Negative phase-sequence system controller phase asymmetry / Neg_seq ctrl asym		
A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 300.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 15.00 [%] [1] 10.00 [%] [2] 50.00 [%]
Description:	Sets the threshold limits and monitoring thresholds for the negative phase-sequence system controller.		
Index:	[0] = Threshold limit [1] = Signaling threshold [2] = Smoothing time		
Note:	For index 0: Sets the limit threshold for the output amplitude of the negative phase-sequence system control. The value of 100 % corresponds to the smoothed line voltage (r0072[4]). For p3640.2 = 1, the following applies: The negative phase-sequence system integral components (r3645) are reduced if the set threshold is exceeded. For index 1: Sets the signaling threshold for the output amplitude of the negative phase-sequence system control. The negative phase-sequence system output amplitude corresponds to the asymmetry of the line voltage. The value of 100 % corresponds to the smoothed line voltage (r0072[4]). The setting value is internally limited to a maximum of 0.9 * p3647[0]. For p3640.1 = 1, the following applies: A06208 is output and r3405.2 is set = 1 if the set threshold is exceeded. This allows line asymmetry monitoring or phase failure detection to be implemented. For index 2: Sets the smoothing time for identifying the asymmetry described under index 1. The 100% value corresponds to 1 second.		
r3648[0...1]	CO: Transformer DC component controller current actual value / Tr DC_ctrl I_act

Description:	Sets the integral time Tn of the DC component controller.		
Dependency:	Refer to: r3648, p3650, p3651, r3652, p3654		

2 Parameters

2.2 List of parameters

Note: The 100% value corresponds to the standard setting
With p3649 = 0, the integral component of the DC component controller is deactivated.

p3650	Transformer DC component controller proportional gain / Tr DC_ctrl Kp		
A_INF (Line transf), R_INF (Line transf)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7987
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	300.00 [%]	0.00 [%]
Description:	Sets the proportional gain Kp of the DC component controller. The DC component control is a very precise control without any remaining system deviation under steady-state operating conditions. It calculates a supplementary voltage for the output voltage of a power unit so that any DC component in the current can be counteracted. The controller is designed analytically based on a model of the controlled system comprising converter, line filter and transformer.		
Dependency:	The prerequisite for the "DC component control" function is that the "Line transformer" function module is activated (r0108.4 = 1). Refer to: r3648, p3649, p3651, r3652, p3654		
Note:	The 100% value corresponds to the standard setting The DC component controller is deactivated with p3650 = 0.		

p3651	Transformer DC component controller limiting / Tr DC_ctrl lim		
A_INF (Line transf), R_INF (Line transf)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7987
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	2.0 [%]	10.0 [%]	5.0 [%]
Description:	Sets the limit for the output voltage of the DC component controller. The value is referred to the device supply voltage (p0210). Refer to: r3648, p3649, p3650, r3652, p3654		
Dependency:	Refer to: r3648, p3649, p3650, r3652, p3654		
Note:	If this parameter is set too low, then a DC component can no longer be corrected.		

r3652[0...1]	CO: Transformer DC component controller manipulated variable / Tr DC_ctrl man_var		
A_INF (Line transf), R_INF (Line transf)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7987
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Display and connector output for the manipulated variable (output voltage) of the DC component controller.		
Index:	[0] = Alpha [1] = Beta		
Dependency:	Refer to: r3648, p3649, p3650, p3651, p3654		
Note:	The manipulated variable is displayed in alpha/beta coordinates, and in comparison to the phase-to-phase rms supply voltage (p0210) is therefore evaluated with a factor of 0.8165.		

p3654	Transformer DC component controller PT2 limit frequency / Tr DC_ctrl PT2 f

2 Parameters

2.2 List of parameters

Value:
0: No sensor
1: PTC
2: KTY84
6: PT1000

Notice: If, when connecting AIMs in parallel, the last position of the Article number (MLFB) is different, then the sensor type must be manually set (p3665).

For MLFBs with the last position 1, 5, 7, p3665 should be set = 6.

For MLFBs with the last position 0, 3, p3665 should be set = 2.

Note: The parameter preassignment depends on the set line filter type (p0220).

For chassis power units, the temperature monitoring of the line filter is active (p3665 = 2 or p3665 = 6).

Description:	Sets the alarm threshold for the temperature sensor of the Voltage Sensing Module (VSM) to monitor the line filter temperature. Prerequisite: A KTY/PT1000 temperature sensor is connected, and correspondingly p3665 is set = 2, 6.		
Dependency:	Refer to: p0220, p3665 Refer to: F06255, A34211		
Note:	For sensor type KTY (p3665 = 2), values 181 ... 300 °C result in fault F06255. The monitoring is deactivated for p3667 = 301. Deactivating the monitoring (p3667 = 301) is only permissible, if, as line filter (p0220) a chassis AIM is not set.		

p3668[0...n]	VSM overtemperature shutdown threshold / VSM T F_thresh		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3

	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the actual value of the voltage measured at the 10 V input 2 of the Voltage Sensing Module (VSM).		
Dependency:	Refer to: p3670		
Note:	10 V input 2: Terminals X520.3 and X520.4		

r3674	CO: VSM 10 V input 2 actual value / VSM inp 2 U_act		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9880
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the actual value of the voltage measured at the 10 V input 2 of the Voltage Sensing Module (VSM).		
Dependency:	Refer to: p3670		
Note:	10 V input 2: Terminals X520.3 and X520.4		

p3676	VSM line filter capacitance alarm threshold / VSMfilt C A_thresh		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	100.00 [%]	0.00 [%]
Description:	Sets the alarm threshold for the change of the capacitance of the line filter. The monitoring of the filter capacitance is deactivated with p3676 = 0.00 %.		
Recommendation:	Set the value >= 20 % and dependent on the harmonic content of the line supply.		
Dependency:	Refer to: p3670 Refer to: A06250		
Notice:	The following must be ensured before activating monitoring (e.g. p3676 = 20 %): Measured filter capacitance (r3677[0...2]) = 3 x filter capacitance (p0221) Otherwise, to establish this ratio, p3670 must be appropriately set. Example: The filter capacitance is specified with p0221 = 39 µF. In order that the measured capacitance is 3x so high, p3670 = 6.7 A must be set in the gain factor. p0221[0] = 39 µF r3677[0...2] = 3 x 39 = 117 µF --> p3670 = 6.7 A		
Note:	Prerequisites for monitoring the filter capacitance: The phase currents must be measured at two capacitors of the line filter. To do this, current transformers should be connected at the 10 V inputs of the Voltage Sensing Module (VSM).		

r3677[0...2]	CO: VSM line filter capacitance / VSM filt C		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [µF]	- [µF]	- [µF]
Description:	Displays the capacitance of the line filter (for a star connection).		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W		
Dependency:	Refer to: p3676		
Note:	Prerequisite: The monitoring of the filter capacitance is activated.		

p3678[0...1]	Filter monitoring threshold values / Filter monit thr		
A_INF (Line transf), R_INF (Line transf)	Can be changed: C2(1)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7991
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	10000.00 [%]	[0] 0.00 [%] [1] 0.00 [%]
Description:	Sets the threshold values for filter monitoring. The voltage threshold value is referred to p0210. The current threshold value is referred to the nominal filter current. Nominal filter current = $2 \times PI \times p0211 \times 3 \times p0221[0] \times p0210 \times \sqrt{2} / \sqrt{3}$		
Index:	[0] = Voltage threshold value [1] = Current threshold value		
Dependency:	Refer to: r3671, r3672, r7310, r7311 Refer to: F06855		
Note:	The filter monitoring function is deactivated with p3678 = 0.00. Recommended setting for activation: Voltage threshold value: 5.0 % Current threshold value: 500 %		

p3679[0...1]	Transformer filter monitoring times / Filter monit times		
A_INF (Line transf), R_INF (Line transf)	Can be changed: C2(1)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7991
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	40.00 [ms]	[0] 20.00 [ms] [1] 0.50 [ms]
Description:	Sets the times for filter monitoring. Index 0: Smoothing time for the alpha and beta components of the filter voltage. Index 1: If the set current threshold value is exceeded at least for the time set, a corresponding fault is output.		
Index:	[0] = Voltage threshold value [1] = Current threshold value		
Dependency:	Refer to: F06855		

p3680	BI: Braking Module internal inhibit / BM int inhib		
B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to inhibit the internal Braking Module. BI: p3680 = 1 signal: The Braking Module is inhibited. BI: p3680 = 0 signal: The Braking Module is enabled.		

Dependency: Refer to: A06904

Caution: When the Braking Module is inhibited, no energy can be dissipated in the braking resistor.

p3681 **BI: Activating Braking Module internal DC link fast discharge / BM intDCdischg act**

B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to activate the DC link fast discharge for an internal braking module.
When the following conditions apply, the DC link fast discharge is started later with delay time (p3682):

- BI: p3681 = 1 signal.
- an external line contactor is opened via r0863.1 "energize contactor".

The DC link fast discharge is interrupted when the following conditions apply:

- BI: p3681 = 0 signal.
- ON command for the infeed.

Recommendation: The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults can occur when precharging (e.g. F30027).

Dependency: Refer to: p3682

Refer to: F30027

Notice: The parameter is only effective for Basic Line Modules with the internal Braking Module (this is valid for Basic Line Modules with a power rating of less than 100 kW).

p3682 **Braking Module internal DC link fast discharge delay time / BM int DC dischg t**

B_INF	Can be changed: C1(3), T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	500 [ms]	4294967295 [ms]	1000 [ms]

Description: Sets the delay time for switching in the DC link fast discharge for an internal Braking Module.

Dependency: Refer to: p3681

Notice: The parameter is only effective for Basic Line Modules with the internal Braking Module (this is valid for Basic Line Modules with a power rating of less than 100 kW).

p3683 **Braking Module internal activation threshold brake chopper / BM int act thresh**

B_INF	Can be changed: C2(1)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	110.00 [V]	780.00 [V]	760.00 [V]

Description: Sets the activation threshold for the braking chopper.

Note: The activation threshold is only effective if the "Device supply voltage reduced" function (p0212.0 = 1) has been activated!

r3685	BO: Digital Braking Module: Pre-alarm I2t shutdown / Dig BM A I2t shutd		
B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	The binector output uses a 1 signal to indicate that 80 % of the highest permissible I2t value has been reached in the Braking Module.		
Dependency:	Refer to: A06905		

r3686	BO: Digital Braking Module fault / Dig BM fault		
B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	The binector output uses a 1 signal to indicate an overcurrent fault or an I2t shutdown in the Braking Module.		
Dependency:	Refer to: F06906		

r3687	BO: Digital Braking Module pre-alarm overtemperature / Dig BM A overtemp		
B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays a fault due to the excessively high temperature. 1 signal: The connected temperature sensor (X21.1, X21.2) signals an overtemperature.		
Recommendation:	Measure the braking resistor temperature using the temperature sensor.		

r3688	BO: Braking Module internal overtemperature shutdown / BM int temp shutd		
B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the shutdown due to the excessively high temperature. 1 signal: The connected temperature sensor (X21.1, X21.2) signals an overtemperature. The highest permissible temperature at the connected temperature sensor has been exceeded and results in a shutdown.		
Dependency:	Refer to: F06908		

r3689	BO: Digital Braking Module Uce fault / Dig BM Uce fault			
B_INF	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays an Uce fault in the internal Braking Module. 1 signal: An Uce fault is present in the internal Braking Module.			
Dependency:	Refer to: F06909			
p3700	APC configuration / APC config			
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 7012	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 0000 0000 0000 bin	
Description:	Sets the configuration for APC (Advanced Positioning Control).			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Activating APC	Yes	No
	01	APC acceleration sensor	Yes	No
	02	APC without sensor on the load side	Yes	No
	03	Take into account acceleration precontrol	Yes	No
	08	Activating pulse de-coupling/speed weighting	Yes	No
	09	APC speed actual value via BICO input	Yes	No
Note:	For bit 00: For a 1 signal, the acceleration filter output is added to the speed setpoint. For a 0 signal, the value 0 is added. This must be used to evaluate the filter frequency characteristics. For bit 01: For a 1 signal, as APC acceleration actual value, the source of p3750 with high pass filtering is used. For a 0 signal, as APC actual value, the encoder actual value selected with p3701 is used. For bit 02: For a 1 signal, as APC actual value, a model value without sensor on the load side is used. In so doing, PT1 filtering with p3709 as smoothing time - and a high pass filter with p3751 as a high pass filter time constant apply. For a 0 signal, as APC actual value, the encoder actual value selected with p3701 is used. For bit 03: For a 1 signal, when calculating the acceleration, the speed precontrol value in p1432[1] is taken into account. For bit 08: For bit 0 = 1 and bit 8 = 1 (pulse decoupling/speed weighting activated), the speed from the direct measuring system (p3701) selected for APC, weighted with p3702, and the motor speed is used as actual value for the speed controller. For bit 09: For a 1 signal, instead of the selected encoder actual value, the source of p3749 weighted with p3748 is used. For a 0 signal, as APC actual value, the encoder actual value selected with p3701 is used.			

2 Parameters

2.2 List of parameters

p3701	APC enc sel / APC enc sel				
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: C1(4)	Calculated: -	Access level: 3		
	Data type: Integer16	Dyn. index: -	Func. diagram: -		
	P-Group: Data sets	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	2	3	2		
Description:	Sets the number of the encoder used for for APC (Advanced Positioning Control).				
Value:	2: Encoder 2 3: Encoder 3				
Note:	Encoder 1 is the motor encoder and cannot be used for APC as APC requires a load measuring system. An encoder used for APC is, regarding its fault messages, treated just like a motor encoder - this means that its fault messages are assigned to the drive.				
p3702[0...n]	APC load speed/motor speed weighting / APC n_load/mot wt				
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: Setpoints	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-10.000	10.000	1.000		
Description:	Sets the weighting factor to form the speed actual value from the load speed and motor speed. p3700.8 = 1 must be set to activate weighting.				
Dependency:	Refer to: p3700, p3701				
Note:	1.0: only corresponds to the load speed. 0.0: only corresponds to the motor speed. 0.5: corresponds to the average value from the load speed and motor speed.				
p3704[0...n]	APC filter activation / APC filter act				
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 7012		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 0000 0000 bin		
Description:	Setting to activate the filter for APC (Advanced Positioning Control).				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Activate filter 1.1	Yes	No	-
	04	Activate filter 2.1	Yes	No	-
	05	Activate filter 2.2	Yes	No	-
	08	Activate filter 3.1	Yes	No	-
	09	Activate filter 3.2	Yes	No	-

p3705[0...n]		APC filter type / APC filter type			
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 7012		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 0000 0000 bin		
Description:	Sets the filter type for the filter for APC (Advanced Positioning Control).				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Filter 1.1 type	A. 2nd ord filter	Low pass (PT2)	-
	04	Filter 2.1 type	A. 2nd ord filter	Low pass (PT2)	-
	05	Filter 2.2 type	A. 2nd ord filter	Low pass (PT2)	-
	08	Filter 3.1 type	A. 2nd ord filter	Low pass (PT2)	-
	09	Filter 3.2 type	A. 2nd ord filter	Low pass (PT2)	-

p3706[0...n]		APC sub-sampling filter 2.x / APC sub-samp. 2.x			
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 7012		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	1	64	1		
Description:	Sets the factor for the sub-sampling in the branch of filter 2.1 and 2.2 for APC (Advanced Positioning Control).				
Note:	The values are integer multiples of the speed controller clock cycle (p0115[1]).				

p3707[0...n]		APC sub-sampling filter 3.x / APC sub-samp. 3.x			
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 7012		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	1	64	1		
Description:	Sets the factor for the sub-sampling in the branch of filter 3.1 and 3.2 for APC (Advanced Positioning Control).				
Note:	The values are integer multiples of the speed controller clock cycle (p0115[1]).				

p3708[0...n]		APC velocity actual value smoothing time encoder 2 / APC v_act t_sm 2			
SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3		
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4711		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0.00 [ms]	50.00 [ms]	0.00 [ms]		
Description:	Sets the smoothing time constant (PT1) for the velocity actual value of encoder 2 with APC (Advanced Positioning Control).				
Note:	The speed actual value should be smoothed for encoders with a low pulse number or for resolvers.				

2 Parameters

2.2 List of parameters

p3708[0...n]	APC speed actual value smoothing time encoder 2 / APC n_act t_sm 2		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4711
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	50.00 [ms]	0.00 [ms]
Description:	Sets the smoothing time constant (PT1) for the speed actual value of encoder 2 with APC (Advanced Positioning Control).		
Note:	The speed actual value should be smoothed for encoders with a low pulse number or for resolvers.		
p3709[0...n]	APC velocity actual value smoothing time encoder 3 / APC v_act t_sm 3		
SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4711
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	50.00 [ms]	0.00 [ms]
Description:	Sets the smoothing time constant (PT1) for the velocity actual value of encoder 3 with APC (Advanced Positioning Control).		
Note:	The speed actual value should be smoothed for encoders with a low pulse number or for resolvers.		
p3709[0...n]	APC speed act. value smoothing time encoder 3/ w/out load sensor / APC n_act t_sm 3		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4711
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	50.00 [ms]	0.00 [ms]
Description:	Sets the smoothing time constant (PT1) for the speed actual value of encoder 3 with APC (Advanced Positioning Control). For p3700.2 = 1, the following applies: Sets the smoothing time constant (PT1) for the model for operation without encoder on the load side for APC (Advanced Positioning Control).		
Note:	The speed actual value should be smoothed for encoders with a low pulse number or for resolvers.		
p3711[0...n]	APC filter 1.1 denominator natural frequency / APC Filt1.1 fn_den		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the denominator natural frequency for filter 1.1 (PT2, general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		

p3712[0...n]	APC filter 1.1 denominator damping / APC Filt 1.1 D_den		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.050	10.000	0.700
Description:	Sets the denominator damping for filter 1.1 (PT2, general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3713[0...n]	APC filter 1.1 numerator natural frequency / APC Filt 1 fn_num		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for filter 1.1 (general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3714[0...n]	APC filter 1.1 numerator damping / APC Filt 1.1 D_num		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for filter 1.1 (general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3721[0...n]	APC filter 2.1 denominator natural frequency / APC Filt2.1 fn_den		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the denominator natural frequency for filter 2.1 (PT2, general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3722[0...n]	APC filter 2.1 denominator damping / APC Filt 2.1 D_den		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.050	10.000	0.700
Description:	Sets the denominator damping for filter 2.1 (PT2, general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		

2 Parameters

2.2 List of parameters

p3723[0...n]	APC filter 2.1 numerator natural frequency / APC Filt2.1 fn_num		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for filter 2.1 (general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3724[0...n]	APC filter 2.1 numerator damping / APC Filt 2.1 D_num		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for filter 2.1 (general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3726[0...n]	APC filter 2.2 denominator natural frequency / APC Filt2.2 fn_den		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the denominator natural frequency for filter 2.2 (PT2, general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3727[0...n]	APC filter 2.2 denominator damping / APC Filt 2.2 D_den		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.050	10.000	0.700
Description:	Sets the denominator damping for filter 2.2 (PT2, general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3728[0...n]	APC filter 2.2 numerator natural frequency / APC Filt2.2 fn_num		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for filter 2.2 (general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		

p3729[0...n]	APC filter 2.2 numerator damping / APC Filt 2.2 D_num		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7029
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for filter 2.2 (general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3731[0...n]	APC filter 3.1 denominator natural frequency / APC Filt3.1 fn_den		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the denominator natural frequency for filter 3.1 (PT2, general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3732[0...n]	APC filter 3.1 denominator damping / APC Filt 3.1 D_den		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.050	10.000	0.700
Description:	Sets the denominator damping for filter 3.1 (PT2, general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3733[0...n]	APC filter 3.1 numerator natural frequency / APC Filt3.1 fn_num		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for filter 3.1 (general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3734[0...n]	APC filter 3.1 numerator damping / APC Filt 3.1 D_num		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for filter 3.1 (general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		

2 Parameters

2.2 List of parameters

p3736[0...n]	APC filter 3.2 denominator natural frequency / APC Filt3.2 fn_den		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the denominator natural frequency for filter 3.2 (PT2, general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3737[0...n]	APC filter 3.2 denominator damping / APC Filt 3.2 D_den		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.050	10.000	0.700
Description:	Sets the denominator damping for filter 3.2 (PT2, general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3738[0...n]	APC filter 3.2 numerator natural frequency / APC Filt3.2 fn_num		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for filter 3.2 (general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3739[0...n]	APC filter 3.2 numerator damping / APC Filt 3.2 D_num		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for filter 3.2 (general 2nd order filter) for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3704, p3705		
p3748[0...n]	APC velocity input scaling / APC v_input scale		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000000.000	1000000.000	1.000
Description:	Sets the scaling to adapt the velocity value via a connector input p3749.		
Dependency:	Refer to: p3749		

p3749[0...n]	CI: APC velocity actual value external input / APC v_act ext inp		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the actual value of the external velocity actual value for APC (Advanced Positioning Control).		
Recommendation:	When interconnecting a speed actual value from another axis, it is recommended to evaluate the bit "Speed information available" (r1992.11) (e.g. interconnect to an external fault p2106 - p2108). To avoid additional dead time as a result of the calculation sequence, it is recommended to set the drive object associated with the signal source of p3749 to a higher priority (p7900).		
Dependency:	Refer to: p3748		
p3750[0...n]	CI: APC acceleration sensor input / APC accel input		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2007	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the actual value of the acceleration sensor for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3700		
p3751[0...n]	APC acceleration sensor high pass time constant / APC accel DT1 T		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	10000.00 [ms]	100.00 [ms]
Description:	Sets the time constant of the high pass filter for the acceleration sensor for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3700, p3750		
p3752[0...n]	APC controller preassignment natural oscillation frequency / APC preassign fn		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Hz]	1000.0 [Hz]	0.0 [Hz]
Description:	Sets the natural oscillation frequency for preassignment of the APC controller data p3709, p3751 and p3761. The value is only effective for operation without an encoder on the load side (p3700.2 = 1). The preassignment is started when writing p3752 > 0 (if p3700.2 = 1).		
Dependency:	Refer to: p3700, p3709, p3751, p3761		
Note:	The load moment of inertia is used for the calculation. Parameters p0342 and p1498 should be checked, and if required, corrected before the calculation.		

2 Parameters

2.2 List of parameters

p3760[0...n]	APC load velocity controller 1 P gain / APC v_load ctr1 Kp		
SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -100.000	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.000	Access level: 2 Func. diagram: 7012 Unit selection: - Expert list: 1 Factory setting 0.000
Description:	Sets the proportional gain of the load velocity controller 1 for APC (Advanced Positioning Control). The gain acts on the difference between the velocity setpoint and load velocity in the branch for filter 2.1 and 2.2.		
p3760[0...n]	APC load speed controller 1 P gain / APC n_load ctr1 Kp		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -100.000	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.000	Access level: 2 Func. diagram: 7012 Unit selection: - Expert list: 1 Factory setting 0.000
Description:	Sets the proportional gain of the load speed controller 1 for APC (Advanced Positioning Control). The gain acts on the difference between the speed setpoint and load speed in the branch for filter 2.1 and 2.2.		
p3761[0...n]	APC load velocity controller 1 rate time / APC v_load ctr1 Tv		
SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -500.00 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 500.00 [ms]	Access level: 2 Func. diagram: 7012 Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Sets the rate time of the load velocity controller 1 for APC (Advanced Positioning Control). The rate time acts on the load acceleration in the branch for filter 2.1 and 2.2.		
p3761[0...n]	APC load speed controller 1 rate time / APC n_load ctr1 Tv		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -500.00 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 500.00 [ms]	Access level: 2 Func. diagram: 7012 Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Sets the rate time of the load speed controller 1 for APC (Advanced Positioning Control). The rate time acts on the load acceleration in the branch for filter 2.1 and 2.2.		
p3765[0...n]	APC load velocity controller 2 P gain / APC v_load ctr2 Kp		
SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -100.000	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.000	Access level: 2 Func. diagram: 7012 Unit selection: - Expert list: 1 Factory setting 0.000
Description:	Sets the proportional gain of the load velocity controller 2 for APC (Advanced Positioning Control). The gain acts on the difference between the velocity setpoint and load velocity in the branch for filter 3.1 and 3.2.		

p3765[0...n]	APC load speed controller 2 P gain / APC n_load ctr2 Kp		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2

	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	10000.00 [ms]	100.00 [ms]
Description:	Sets the time constant of the high pass filter for the differential position gain for APC.		
Dependency:	Refer to: p3700, p3768		
Note:	APC: Advanced Positioning Control		

p3768[0...n]	APC differential position gain factor / APC s_dif Kp		
SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7013
	P-Group: Closed-loop control	Unit group: 49_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-50000.00 [Nm/rad]	50000.00 [Nm/rad]	0.00 [Nm/rad]
Description:	Sets the gain factor Kp for the differential position controller for APC. The gain acts on the force setpoint (in front of the current setpoint filters).		

2 Parameters

2.2 List of parameters

Dependency: Refer to: p3700, p3767, r3769
Note: APC: Advanced Positioning Control

p3768[0...n]	APC differential position gain factor / APC s_dif Kp		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7013
	P-Group: Closed-loop control	Unit group: 49_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-50000.00 [Nm/rad]	50000.00 [Nm/rad]	0.00 [Nm/rad]

Description: Sets the gain factor Kp for the differential position controller for APC.
The gain acts on the torque setpoint (in front of the current setpoint filters).
The differential position controller is deactivated with a value = 0.

Dependency: Refer to: p3700, p3767, r3769
Note: APC: Advanced Positioning Control

r3769	CO: APC differential position force setpoint / APC s_dif F_set		
SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5040, 7013
	P-Group: Setpoints	Unit group: 8_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [N]	- [N]	- [N]

Description: Display and connector output for the force setpoint from the differential position controller for APC.
This value is added to the force setpoint of the velocity controller (r1480).

Dependency: Refer to: p3700, p3767, p3768
Note: APC: Advanced Positioning Control

r3769	CO: APC differential position torque setpoint / APC s_dif M_set		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5040, 7013
	P-Group: Setpoints	Unit group: 7_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the torque setpoint from the differential position controller for APC.
This value is added to the torque setpoint of the speed controller (r1480).

Dependency: Refer to: p3700, p3767, p3768
Note: APC: Advanced Positioning Control

r3770	CO: APC load velocity / APC v_load		
SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4711, 7012
	P-Group: Setpoints	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]

Description: Display and connector output for the load velocity for APC (Advanced Positioning Control).

Dependency: Refer to: r3771

r3770	CO: APC load speed / APC n_load		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4711, 7012
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the load speed for APC (Advanced Positioning Control).		
Dependency:	Refer to: r3771		

r3771[0...1]	CO: APC velocity actual value / APC v_act		
SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4711, 5040, 5042
	P-Group: Setpoints	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Displays the load/motor velocity actual value weighted with p3702 for APC (Advanced Positioning Control). Displays the velocity actual values for APC (Advanced Positioning Control). Index 0: Displays the smoothed load velocity. Index 1: Displays the load/motor velocity actual value weighted with p3702 for p3700.8=1.		
Index:	[0] = Load actual value speed smoothed [1] = Load/motor actual speed weighted		
Dependency:	Refer to: p1441, r3770		

r3771[0...1]	CO: APC speed actual value / APC n_act		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4711, 5040, 5042
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the speed actual values for APC (Advanced Positioning Control). Index 0: Displays the smoothed load speed. Index 1: Displays the load/motor speed actual value weighted with p3702 for p3700.8=1.		
Index:	[0] = Load actual value speed smoothed [1] = Load/motor actual speed weighted		
Dependency:	Refer to: p1441, r3770

Description:	Sets the speed limit for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3779		
p3779[0...n]	APC velocity limit monitoring time / APC v_limit t		
SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)	Can be changed: U, T Data type: Unsigned32 P-Group: Closed-loop control Not for motor type: REL Min 0 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000000 [ms]	Access level: 2 Func. diagram: 7012 Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the monitoring time to limit the output for APC (Advanced Positioning Control). This monitoring time is started after the selected limit value (p3778) has been exceeded. A corresponding fault is output if the limit value is not undershot before this time expires.		

2 Parameters

2.2 List of parameters

Dependency: Refer to: p3778
Refer to: F07425

p3779[0...n]	APC speed limit monitoring time / APC n_limit t		
SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: 7012
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000000 [ms]	0 [ms]
Description:	Sets the monitoring time to limit the output for APC (Advanced Positioning Control). This monitoring time is started after the selected limit value (p3778) has been exceeded. A corresponding fault is output if the limit value is not undershot before this time expires.		
Dependency:	Refer to: p3778 Refer to: F07425		

p3800[0...n]	Sync-line-drive activation / Sync act		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the activation for the line-drive synchronization.		
Value:	0: Sync-line-drive deactivated 1: Sync-line-drive activated VSM-INT		
Dependency:	Refer to: p3801, p3802		
Caution:	 <p>If there is only one VSM being used, this can either be used for line synchronization or for a flying restart. If the VSM was connected to the line supply, then flying restart should be deselected in p1200. If the VSM was connected at the output (motor side), then line synchronization should be deactivated using p3800. Line synchronization (first VSM connected with the line supply) and also flying restart (second VSM connected to the motor terminals) can only be used if two VSMs are assigned to the Motor Module.</p>		
Note:	<p>When the ground fault monitoring initiates a fault for overlapping synchronizing the threshold value p0287[1] for the Motor Module and the associated infeed must be appropriately increased (e.g. p0287[1] = 100 %). For p3800 = 1, the following applies: The INTERNAL voltage actual values are used for synchronization. The effects that a (sine-wave) filter - that is connected between the Motor Module and motor - has on the voltage actual values are taken into account (theoretically) by appropriately selecting p0230. VSM: Voltage Sensing Module</p>		

p3801[0...n]	Sync-line-drive drive object number / Sync DO_no		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	62	1
Description:	Sets the drive object number of the VSM used for the line-drive synchronization.		
Dependency:	Refer to: p3800, p3802		
Notice:	The current controller sampling time p0115[0] of the drive object with the VSM used for synchronization must be identical to the current controller sampling time of the drive of the drive used to perform line synchronization.		
Note:	<p>VSM: Voltage Sensing Module The setting p3801 = 1 is always possible (no VSM selected). If the VSM is assigned subsequently to a Motor Module, its drive object number must be entered in p3801. The line voltage is always measured using the first VSM (p0151[0]).</p>		

p3802[0...n]	BI: Sync-line-drive enable / Sync enable			
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 2

	P-Group: Functions	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source to switch in/switch out for the line-drive synchronization. BI: p3802 = 1 signal: The line-drive synchronization is switched in.			
Dependency:	Refer to: p3800, p3801			
r3803.0	CO/BO: Sync-line-drive control word / Sync STW			
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -	
	P-Group: Functions	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the control word for the line-drive synchronization.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Sync-line-drive selected	Yes	No
				FP
				-
Note:	For bit 00: For a 1 signal, p3800 > 0 is set.			
r3804	CO: Sync-line-drive target frequency / Sync f_target			
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3030, 7020	
	P-Group: Functions	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: p2000	Expert list: 1	
	Min	Max	Factory setting	
	- [Hz]	- [Hz]	- [Hz]	
Description:	Displays the target frequency for the line-drive synchronization.			
Dependency:	Refer to: A07941			
r3805	CO: Sync-line-drive frequency difference / Sync f_diff			
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7020	
	P-Group: Functions	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: p2000	Expert list: 1	
	Min	Max	Factory setting	
	- [Hz]	- [Hz]	- [Hz]	
Description:	Displays the frequency difference between the measured target frequency and output frequency of the gating unit of the closed-loop control for line-drive synchronization.			

2 Parameters

2.2 List of parameters

p3806[0...n]	Sync-line-drive frequency difference threshold value / Sync f_diff thresh		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [Hz]	Max 1.00 [Hz]	Factory setting 0.10 [Hz]
Description:	Sets the threshold value of the frequency difference to activate the closed-loop phase control for line-drive synchronization. The closed-loop phase control is activated (r3819.6 = 1), if the frequency difference is less that the threshold value.		
r3808	CO: Sync-line-drive phase difference / Sync phase diff		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min - [°]	Max - [°]	Factory setting - [°]
Description:	Displays the phase difference between the measured target phase and phase of the gating unit of the closed-loop control for line-drive synchronization.		
p3809[0...n]	Sync-line-drive phase setpoint / Sync phase setp		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -180.00 [°]	Max 179.90 [°]	Factory setting 0.00 [°]
Description:	Sets the phase setpoint for the line-drive synchronization.		
p3811[0...n]	Sync-line-drive frequency limiting / Sync f_lim		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [Hz]	Max 1.00 [Hz]	Factory setting 0.20 [Hz]
Description:	Sets the frequency limiting of the phase controller output for the line-drive synchronization.		
r3812	CO: Sync-line-drive correction frequency / Sync f_corr		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3080, 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min - [Hz]	Max - [Hz]	Factory setting - [Hz]
Description:	Displays the correction frequency for the line-drive synchronization.		

p3813[0...n]	Sync-line-drive phase synchronism threshold value / Sync Ph_sync thrsh		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.00 [°]	20.00 [°]	2.00 [°]
Description:	Sets the threshold value of the phase synchronism for the line-drive synchronization. A prerequisite for synchronism is achieved if the phase difference is lower than the threshold value.		
Note:	Synchronism is reached ($r3819.2 = 1$), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.		

r3814	CO: Sync-line-drive voltage difference / Sync U_diff		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Display and connector output for the voltage difference between the measured target voltage and output voltage of the gating unit of the closed-loop control for line-drive synchronization.		

p3815[0...n]	Sync-line-drive voltage difference threshold value / Sync U_diff thresh		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	20.00 [%]	10.00 [%]
Description:	Sets the threshold value of the voltage difference for the line-drive synchronization. A prerequisite for synchronism is reached if the voltage difference is less than the threshold value.		
Note:	Synchronism is reached ($r3819.2 = 1$), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled. For voltage manipulated quantity margin (reserve) of the drive converter, the amplitude difference (r3814) between the setpoint and actual value is controlled (corrected) to zero.		

r3819.0...7	CO/BO: Sync-line-drive status word / Sync ZSW				
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 7020		
	P-Group: Functions	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the status word for the line-drive synchronization.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Sync-line-drive enabled	Yes	No	-
	02	Sync-line-drive synchronism reached	Yes	No	-
	03	Sync-line-drive synchronizing error	Yes	No	-
	05	Sync-line-drive frequency measurement active	Yes	No	-
	06	Sync-line-drive phase control active	Yes	No	-
	07	Sync-line-drive without drive	Yes	No	-

2 Parameters

2.2 List of parameters

p3820[0...n]	Friction characteristic value n0 / Friction n0		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 210000.00 [rpm]	Factory setting 15.00 [rpm]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the n coordinate of the 1st value pair of the friction characteristic.		
Dependency:	Refer to: p3830, p3845		

p3820[0...n]	Friction characteristic value v0 / Friction v0		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min 0.00 [m/min]	Max 21000.00 [m/min]	Factory setting 1.50 [m/min]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the v coordinate of the 1st value pair of the friction characteristic.		
Dependency:	Refer to: p3830, p3845		

p3821[0...n]	Friction characteristic value n1 / Friction n1		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 210000.00 [rpm]	Factory setting 30.00 [rpm]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the n coordinate of the 2nd value pair of the friction characteristic.		
Dependency:	Refer to: p3831, p3845		

p3821[0...n]	Friction characteristic value v1 / Friction v1		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min 0.00 [m/min]	Max 21000.00 [m/min]	Factory setting 3.00 [m/min]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the v coordinate of the 2nd value pair of the friction characteristic.		
Dependency:	Refer to: p3831, p3845		

p3822[0...n]	Friction characteristic value n2 / Friction n2		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	60.00 [rpm]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the n coordinate of the 3rd value pair of the friction characteristic.		
Dependency:	Refer to: p3832, p3845		

p3822[0...n]	Friction characteristic value v2 / Friction v2		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	21000.00 [m/min]	6.00 [m/min]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the v coordinate of the 3rd value pair of the friction characteristic.		
Dependency:	Refer to: p3832, p3845		

p3823[0...n]	Friction characteristic value n3 / Friction n3		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	120.00 [rpm]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the n coordinate of the 4th value pair of the friction characteristic.		
Dependency:	Refer to: p3833, p3845		

p3823[0...n]	Friction characteristic value v3 / Friction v3		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	21000.00 [m/min]	12.00 [m/min]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the v coordinate of the 4th value pair of the friction characteristic.		
Dependency:	Refer to: p3833, p3845		

2 Parameters

2.2 List of parameters

p3824[0...n]	Friction characteristic value n4 / Friction n4		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	150.00 [rpm]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the n coordinate of the 5th value pair of the friction characteristic.		
Dependency:	Refer to: p3834, p3845		

p3824[0...n]	Friction characteristic value v4 / Friction v4		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	21000.00 [m/min]	15.00 [m/min]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the v coordinate of the 5th value pair of the friction characteristic.		
Dependency:	Refer to: p3834, p3845		

p3825[0...n]	Friction characteristic value n5 / Friction n5		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	300.00 [rpm]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the n coordinate of the 6th value pair of the friction characteristic.		
Dependency:	Refer to: p3835, p3845		

p3825[0...n]	Friction characteristic value v5 / Friction v5		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	21000.00 [m/min]	30.00 [m/min]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the v coordinate of the 6th value pair of the friction characteristic.		
Dependency:	Refer to: p3835, p3845		

p3826[0...n]	Friction characteristic value n6 / Friction n6		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	600.00 [rpm]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the n coordinate of the 7th value pair of the friction characteristic.		
Dependency:	Refer to: p3836, p3845		

p3826[0...n]	Friction characteristic value v6 / Friction v6		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	21000.00 [m/min]	60.00 [m/min]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the v coordinate of the 7th value pair of the friction characteristic.		
Dependency:	Refer to: p3836, p3845		

p3827[0...n]	Friction characteristic value n7 / Friction n7		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	1200.00 [rpm]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the n coordinate of the 8th value pair of the friction characteristic.		
Dependency:	Refer to: p3837, p3845		

p3827[0...n]	Friction characteristic value v7 / Friction v7		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	21000.00 [m/min]	120.00 [m/min]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the v coordinate of the 8th value pair of the friction characteristic.		
Dependency:	Refer to: p3837, p3845		

2 Parameters

2.2 List of parameters

p3828[0...n]	Friction characteristic value n8 / Friction n8		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 210000.00 [rpm]	Factory setting 1500.00 [rpm]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the n coordinate of the 9th value pair of the friction characteristic.		
Dependency:	Refer to: p3838, p3845		

p3828[0...n]	Friction characteristic value v8 / Friction v8		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min 0.00 [m/min]	Max 21000.00 [m/min]	Factory setting 150.00 [m/min]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the v coordinate of the 9th value pair of the friction characteristic.		
Dependency:	Refer to: p3838, p3845		

p3829[0...n]	Friction characteristic value n9 / Friction n9		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 210000.00 [rpm]	Factory setting 3000.00 [rpm]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the n coordinate of the 10th value pair of the friction characteristic.		
Dependency:	Refer to: p3839, p3845		

p3829[0...n]	Friction characteristic value v9 / Friction v9		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min 0.00 [m/min]	Max 21000.00 [m/min]	Factory setting 300.00 [m/min]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the v coordinate of the 10th value pair of the friction characteristic.		
Dependency:	Refer to: p3839, p3845		

p3830[0...n]	Friction characteristic value M0 / Friction M0		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000000.0000 [Nm]	1000000.0000 [Nm]	0.0000 [Nm]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the M coordinate of the 1st value pair of the friction characteristic.		
Dependency:	Refer to: p3820, p3845		

p3830[0...n]	Friction characteristic value F0 / Friction F0		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: 8_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000000.0000 [N]	1000000.0000 [N]	0.0000 [N]
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the F coordinate of the 1st value pair of the friction characteristic.		
Dependency:	Refer to: p3820, p3845		

p3831[0...n]	Friction characteristic value M1 / Friction M1

	Min	Max	Factory setting
	-	-	-

Description: Display and BICO output for the status word of the friction characteristic.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Friction characteristic OK	Yes	No	-
	01	Friction characteristic record activated	Yes	No	-
	02	Friction characteristic record completed	Yes	No	-
	03	Friction characteristic record aborted	Yes	No	-
	08	Friction characteristic positive direction	Yes	No	-

r3840.0...9	CO/BO: Friction characteristic status word / Friction ZSW		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 7010
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Display and BICO output for the status word of the friction characteristic.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Friction characteristic OK	Yes	No	-
	01	Friction characteristic record activated	Yes	No	-
	02	Friction characteristic record completed	Yes	No	-
	03	Friction characteristic record aborted	Yes	No	-
	08	Friction characteristic positive direction	Yes	No	-
	09	Friction torque model controlled status	Upper	Lower	-

Note: For bit 09:

For closed-control of an induction motors with encoder, the switchover between the current and observer model is displayed (see also r1751.19), if p3844 is > 0.

The following applies for bit 9 = 0 (observer model active):

The frictional torque is calculated from the characteristic values from the characteristic point entered into p3844.

The following applies for bit 9 = 1 (current model active):

The frictional torque is calculated from the characteristic values below the characteristic point entered into p3844.

r3841	CO: Friction characteristic output / Frict outp

Description:	Setting to activate and deactivate the friction characteristic.			
Value:	0: Friction characteristic deactivated 1: Friction characteristic activated			
Dependency:	Refer to: p1569, r3841, p3845			
p3843[0...n]	Friction characteristic frictional torque diff. smoothing time / Frict M_diff t_sm			
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: PMSM, SESM, REL Min 0.00 [ms]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [ms]	
Description:	Sets the smoothing time constant (PT1) for the friction torque difference. Smoothing is activated when switching over from status bit r3840.9.			
Dependency:	Refer to: p3844			
p3844[0...n]	Friction characteristic number changeover point upper / FricNo chng_pt up			
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: Unsigned8 P-Group: Closed-loop control Not for motor type: PMSM, SESM, REL Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 4	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0	
Description:	Selects the upper changeover point of the friction characteristic for the frictional torque input controlled by the motor model of the induction motor. The speed of this changeover point is pre-assigned when automatically calculating with the changeover speed p1752. The changeover point located below is pre-assigned with the changeover speed $p1752 * (1 - p1753)$. Example: p3844 = 3 means that the speed value for the change to the monitor model (p3823 = p1752) is entered into p3823 (friction characteristic value n3). Depending on the display of r3840.9, the frictional torque is calculated from the friction characteristic values, which are associated with these changeover points. For the changeover of the motor model, with hysteresis, the frictional torque smoothed with p3843 changes between these two states.			
Dependency:	As part of the automatic calculation (p0340), p3844 is only activated for closed loop control (p1300 = 21, 23) of induction motors with encoder. Refer to: p3843			

2 Parameters

2.2 List of parameters

- Notice:** If the changeover point defined using p3844 does not match the changeover speed p1752, then internally, the model-controlled friction torque input is automatically deactivated (same as for p3844 = 0).
- Note:** For p3844 = 0, the model-controlled frictional torque changeover is deactivated. The frictional torque is then calculated the same as for the encoderless control by interpolating between the points along the friction characteristic.

p3845		Friction characteristic record activation / Frict rec act		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: Integer16 P-Group: Functions Not for motor type: REL Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 2 Func. diagram: 7010 Unit selection: - Expert list: 1 Factory setting 0	
Description:	Setting for the friction characteristic record. After the next switch-on command, the friction characteristic is automatically recorded.			
Value:	0: Friction characteristic record deactivated 1: Friction char record activated for all directions 2: Friction char record activated for positive direction 3: Friction char record activated for negative direction			
Dependency:	When selecting the friction characteristic measurement, the drive data set changeover is suppressed. For linear drives (refer to r0108 bit 12) it is not permissible to carry out the friction characteristic measurement for mechanical systems that limit travel.			
Danger:	For drives with a mechanical system that limit the distance moved, it must be ensured that during recording, the friction characteristic is not reached. If this is not the case, then it is not permissible that the measurement is carried out.			
				
Notice:	To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).			
Note:	When the friction characteristic record is active, it is not possible to save the parameters (p0971, p0977). When the friction characteristic record is active (p3845 > 0), it is not possible to change p3820 ... p3829, p3830 ... p3839 and p3842. When recording the friction characteristic, in addition to the friction, the motor losses are also determined (e.g. iron losses, eddy current losses and re-magnetizing losses). A differentiation is not made between these individual loss components. We recommend that a motor temperature sensor is used because torque deviations can also be emulated/mapped on the characteristic due to the thermal influence.			

p3846[0...n]		Friction characteristic record ramp-up/ramp-down time / Frict rec t_RU/RD		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T Data type: FloatingPoint32 P-Group: Functions Not for motor type: REL Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 999999.000 [s]	Access level: 2 Func. diagram: 7010 Unit selection: - Expert list: 1 Factory setting 10.000 [s]	
Description:	Sets the ramp-up/ramp-down time of the ramp-up/ramp-down function generator to automatically record the friction characteristic. The drive is accelerated from standstill (setpoint = 0) up to the maximum speed/velocity (p1082) in this time.			
Dependency:	Refer to: p3845			

p3847[0...n]		Friction characteristic record warm-up time / Frict rec t_warm		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 2

A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9951	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	

Description: Signal to energize terminal X21.1 "inhibit/acknowledgment" on the Braking Module. This binector output is used as signal source to interconnect to a digital output. For "booksize" formats the digital output must be connected to terminal X21.1 and for "chassis" formats the digital output must be connected to terminal X21.3 of the particular Braking Module.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Inhibit/acknowledge Braking Module 1	High	Low	-
	01	Inhibit/acknowledge Braking Module 2	High	Low	-
	02	Inhibit/acknowledge Braking Module 3	High	Low	-
	03	Inhibit/acknowledge Braking Module 4	High	Low	-
	04	Inhibit/acknowledge Braking Module 5	High	Low	-
	05	Inhibit/acknowledge Braking Module 6	High	Low	-
	06	Inhibit/acknowledge Braking Module 7	High	Low	-
	07	Inhibit/acknowledge Braking Module 8	High	Low	-

Warning: Check that binector outputs BO: r3861.n are connected correctly and that the appropriate digital outputs are wired correctly.

If the interconnection/wiring is incorrect, the software could execute a different (incorrect) function via binector outputs BO: r3861.n if the Braking Module develops a fault.

2 Parameters

2.2 List of parameters

p3862		Braking Module DC link fast discharge delay time / BM DC-dischg t_del		
A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)	Can be changed: C1(3), T	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9951	
	P-Group: Communications	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	500 [ms]	4294967295 [ms]	1000 [ms]	
Description:	Sets the delay time for switching in the DC link fast discharge.			
Dependency:	Refer to: p3863, r3864			
Note:	The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.			

p3863		BI: Activating Braking Module DC link fast discharge / BM DC-dischg act		
A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9951	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source to activate the DC link fast discharge. The DC link fast discharge is started later with delay time (p3862) when the following conditions apply: - BI: p3863 = 1 signal. - an external line contactor is opened via r0863.1 "energize contactor". The DC link fast discharge is interrupted when the following conditions apply: - BI: p3863 = 0 signal. - ON command for the infeed.			
Recommendation:	The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults can occur when precharging (e.g. F30027).			
Dependency:	Refer to: r3864 Refer to: F30027			
Note:	The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.			

r3864.0...7		BO: Braking Module DC link fast discharge / BM DC link dischg			
A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9951		
	P-Group: Commands	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Signal to control (energize) terminal X21.2 "DC link fast discharge" on the Braking Module. This binector output is used as signal source to interconnect to a digital output. The digital output must be connected to terminal X21.2 of the particular Braking Module.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Fast discharge Braking Module 1	High	Low	-
	01	Fast discharge Braking Module 2	High	Low	-
	02	Fast discharge Braking Module 3	High	Low	-
	03	Fast discharge Braking Module 4	High	Low	-
	04	Fast discharge Braking Module 5	High	Low	-
	05	Fast discharge Braking Module 6	High	Low	-
	06	Fast discharge Braking Module 7	High	Low	-
	07	Fast discharge Braking Module 8	High	Low	-

Dependency: Refer to: p3863
Refer to: F30027

Warning:

It must be carefully ensured that the binector outputs BO: p3864.n are correctly interconnected and also that the appropriate digital outputs are correctly connected up.

If the interconnection/connection is incorrect, in the case of an active DC link fast discharge, the software could execute another function (incorrect function) via binector outputs BO: p3864.n or could also permanently control the DC link fast discharge even if the line contactor is closed.

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3865[0...7] BI: Braking Module pre-alarm I*t shutdown / BM I*t shutdown

A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9951
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the message "pre-alarm I*t shutdown" of the Braking Module.

BI: p3865[0...7] = 1 signal --> no pre-alarm, I*t shutdown

BI: p3865[0...7] = 0 signal --> pre-alarm I*t shutdown (A06901)

Dependency: Refer to: A06901

Note: For the Braking Module, this message is output via the following terminal:

- X21.4 for the "Booksize" format

This function is not supported for the "chassis" format.

p3866[0...7] BI: Braking Module fault / BM fault

A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9951
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the "Fault" message of the Braking Module.

BI: p3866[0...7] = 1 signal --> No fault

BI: p3866[0...7] = 0 signal --> fault (A06900)

For a 0 signal, an acknowledgment via BO: r3861 is automatically carried out at certain time intervals.

Dependency: Refer to: A06900

Note: For the Braking Module, this message is output via the following terminal:

- X21.4 for the "Booksize" format

- X21.5 for the "Chassis" format

p3870 Long stator configuration / Long stator config

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the configuration when operating a long stator motor.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Activate long stator help functions	Active	Inactive	-
	01	Suppress Gx_ZSW.14	Active	Inactive	-

Dependency: Refer to: p3871, p3872, p3873, p3874, r3875, p3876, p3878, p3879

2 Parameters

2.2 List of parameters

- Notice:** The following restrictions apply to this function:
- it is not permissible to change over the drive data set.
 - the encoder/drive may not be parked using a PROFIBUS telegram.
 - a maximum of 4 drives may be connected to the Control Unit.
 - it is not permissible to commute with the zero mark (p0404).
- Note:** For bit 00:
All of the help functions for long stator motors can be enabled/disabled using this bit.
For bit 01:
When the bit is set, bit 14 (parking encoder active) is set to 0 in the encoder status word GX_ZSW independent of whether the encoder is parked or not.

p3871 **BI: Set long stator signal source commutation angle (p3872) / Set s_src com ang**

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to set the commutation angle available via connector input p3872.

Dependency: Refer to: p3870, p3872, p3873, p3874, r3875, p3876, p3878, p3879

Danger: Setting an incorrect commutation angle can result in instability in the closed-loop control and in turn injure personnel or cause damage to the machine!

Note: Setting takes place for a 0/1 signal edge.

p3872 **CI: Long stator signal source commutation angle / S s com angle**

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	-	-	3878[0]

Description: Sets the signal source for the commutation angle.

This angle is set for a 0/1 signal edge via BI: p3871.

Dependency: Refer to: p3870, p3871, p3873, r3875, p3876, p3878, p3879

Danger: Setting an incorrect commutation angle can result in instability in the closed-loop control and in turn injure personnel or cause damage to the machine!

p3873 **BI: Long stator sig. source changeover to cl.-loop ctrl w/ enc. / S s ctrl w/ enc**

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to change over to closed-loop control with encoder.

Dependency: Refer to: p3870, p3871, p3872, p3874, r3875, p3876, p3878, p3879

Danger: Setting an incorrect commutation angle can result in instability in the closed-loop control and in turn injure personnel or cause damage to the machine!

Note: BI: p3873 = 1 signal --> closed-loop control with encoder
BI: p3873 = 0 signal --> encoderless closed-loop control
For a 0/1 edge, the commutation angle is set from CI: p3874.

p3874	CI: Long stator signal source commutation angle oper. with encoder / S s com ang enc		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	-	-	3879[0]
Description:	Sets the signal source for the commutation angle for operation with encoder.		
Dependency:	Refer to: p3870, p3871, p3872, p3873, p3875, p3876, p3878, p3879		
Note:	This angle is set for a 0/1 signal edge via BI: p3873.		

r3875.0...1	CO/BO: Long stator status word / Long stator ZSW				
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the status word for long stator motors.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Sensor Module is unparked	Yes	No	-
	01	Closed-loop speed control with encoder requested	Active	Inactive	-
Dependency:	Refer to: p3870, p3871, p3872, p3873, p3874, p3876, p3878, p3879				
Note:	The display is updated with a sampling time of 1 ms. For bit 00 = 1: The encoder is parked. Contrary to r0481.14, parking is also displayed here if the suppression of the parking bit is active in r0481.14 (p3870.1 = 1). For bit 01 = 1: The long-stator functions requested closed-loop speed control with encoder. In r1407.2, it is indicated as to whether an encoder is actually used for the closed-loop control.				

r3875.0...1	CO/BO: Long stator status word / Long stator ZSW				
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the status word for long stator motors.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Sensor Module is unparked	Yes	No	-
	01	Closed-loop velocity control with encoder requested	Active	Inactive	-
Dependency:	Refer to: p3870, p3871, p3872, p3873, p3874, p3876, p3878, p3879				
Note:	The display is updated with a sampling time of 1 ms. For bit 00 = 1: The encoder is parked. Contrary to r0481.14, parking is also displayed here if the suppression of the parking bit is active in r0481.14 (p3870.1 = 1). For bit 01 = 1: The long-stator functions requested closed-loop velocity control with encoder. In r1407.2, it is indicated as to whether an encoder is actually used for the closed-loop control.

	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [°]
Description:	Sets the commutation angle 2 for long stator motors.
Dependency:	Refer to: p3870, p3871, p3872, p3873, p3874, r3875, p3876, p3878
p3880	BI: ESM activation signal source / ESM act s s
VECTOR	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Functions Not for motor type: - Min - Max -
	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -
	Access level: 3 Func. diagram: 7033 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to activate the essential service mode (ESM) via digital input. Using this function, when required the motor can be operated for as long as possible (e.g. to extract smoke). BI: p3880 = 1 signal: The essential service mode is activated. BI: p3880 = 0 signal: The essential service mode is deactivated.
Dependency:	The function can only be activated for SINAMICS G130/G150/S150. Refer to: p3881, p3882, p3883, p3886, r3887, p3888, r3889
Warning:	When activating the essential service mode (BI: p3880 = 1 signal), the motor immediately runs according to the selected setpoint source. When the essential service mode is activated, the motor cannot be stopped using the OFF commands.

Note: ESM: Essential Service Mode
Permissible signal sources:
- BO: r0722.x (high active)
- BO: r0723.x (low active), x = 0 ... 17, 20, 21

p3881 ESM setpoint source / ESM setp_src

VECTOR	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 7033
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	7	0

Description: Sets the setpoint source for essential service mode (ESM).

Value: 0: Last known setpoint (r1078 smoothed)
1: Fixed speed setpoint 15 (p1015)
3: Fieldbus
5: TB30/TM31 analog input
6: Enable the response OFF1
7: Enable the response OFF2

Note: ESM: Essential Service Mode

When the essential service mode is activated, the effective speed setpoint is displayed in r1114.

For p3881 = 0:

The last known setpoint value is only transmitted safely if it was present consistently for at least 30 s prior to activating the essential service mode. If this condition is not met, fixed speed setpoint 15 (p1015) is used.

Speed setpoints from the jog mode (p1058, p1059) are not taken into account.

For p3881 = 5:

The signal source for the setpoint via analog input for TB30/TM31 is set via p3886.

For p3881 = 6:

n_act = 0: pulse suppression and switching-on inhibited.

n_active > 0: braking along the ramp-function generator down ramp (p1121), pulse cancellation and switching-on inhibited.

For p3881 = 7:

n_act = 0: pulse suppression and switching-on inhibited.

n_act > 0: immediate pulse cancellation and switching-on inhibited.

p3882 ESM setpoint source alternative / ESM setp_src alt

VECTOR	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 7033
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	0

Description: Sets the alternative setpoint source for essential service mode (ESM).

This setpoint is used when the setpoint source set in p3881 is lost.

Value: 0: Last known setpoint (r1078 smoothed)
1: Fixed speed setpoint 15 (p1015)
2: Maximum speed (p1082)

Dependency: Refer to: p3881

Note: ESM: Essential Service Mode

The alternative setpoint source is only active for p3881 = 3, 5.

	07	Setpoint TB30/TM31 analog input parameterized (p3886)	Yes	No	-
	08	Power unit not permissible (permissible p0201 >= 14000)	Yes	No	-
	09	Response OFF1/OFF2 activated	Yes	No	-
	10	Automatic restart interrupted (F07320)	Yes	No	-
Note:	ESM: Essential Service Mode				
p3900		Completion of quick commissioning / Compl quick_comm			
HLA	Can be changed: C2(1)	Calculated: -	Access level: 1		
	Data type: Integer16	Dyn. index: -	Func. diagram: -		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0	3	0		
Description:	Exits quick commissioning (p0010 = 1) with automatic calculation of all parameters of all existing drive data sets that depend on the entries made during quick commissioning. p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning. The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 are re-established and all of the dependent motor, open-loop and control-loop control parameters are calculated (corresponding to p0340 = 1). p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 and the calculations corresponding to p0340 = 1. p3900 = 3 only includes the calculations associated with the motor, open-loop and closed-loop control parameters corresponding to p0340 = 1F.				
Value:	0: No quick parameterization 1: Quick parameterization after parameter reset 2: Quick parameterization (only) for BICO and motor parameters 3: Quick parameterization for motor parameters (only)				
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.				
Note:	When the calculations have been completed, p3900 and p0010 are automatically reset to a value of zero. When calculating motor, open-loop and closed-loop control parameters (such as for p0340 = 1) parameters associated with a selected Siemens catalog motor are not overwritten.

A_INF, S_INF, R_INF, B_INF	Can be changed: C2(1)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	0

Description: Exits the quick commissioning (p0010 = 1) with automatic calculation of all of the parameters that depend on the entries made during the quick commissioning.
 p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning. The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700 are re-established and all of the dependent filter and closed-loop control parameters are calculated (corresponding to p0340 = 1).
 p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700 and the calculations corresponding to p0340 = 1.
 p3900 = 3 only includes the end of quick commissioning.

Value:
 0: No quick parameterization
 1: Quick parameterization after parameter reset
 2: Quick param. (only) for controller par. and reset for BICO par
 3: Completion of quick commissioning

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: When the calculations have been completed, p3900 and p0010 are automatically reset to a value of zero.

p3901[0...n] Power unit EEPROM Vdc offset calibration / PU EEPROM Vdc offs

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: C1, C2(1), T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-40.0 [V]	40.0 [V]	0.0 [V]

Description: Differential voltage for calibrating the offset for DC link voltage measurement.

Dependency: Refer to: r0192, p0212

Caution: Incorrect use of the calibration can have a negative impact on the closed-loop control.

The parameter influences the upper and lower voltage detection.

Note: Parameter entries are directly saved in the DRIVE-CLiQ component involved.

The parameter is only effective in the case of booksize power units, if r0192.22 = 1 and p0212.0 = 1.

r3979	BICO counter drive object / BICO counter DO			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK	Can be changed: - Data type: Unsigned32 P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Displays the counter reading for modified BICO interconnections on this drive object. The counter is incremented by one for each modified BICO interconnection.			
p3981	Acknowledge drive object faults / Ackn DO faults			
All objects	Can be changed: U, T Data type: Unsigned8 P-Group: Messages Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: 8060 Unit selection: - Expert list: 1 Factory setting 0	
Description:	Setting to acknowledge all active faults of a drive object.			
Notice:	Safety messages cannot be acknowledged using this parameter.			
Note:	Parameter should be set from 0 to 1 to acknowledge. After acknowledgment, the parameter is automatically reset to 0.			

p3985	Master control mode selection / PcCtrl mode select		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: U, T Data type: Integer16 P-Group: Setpoints Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the mode to change over the master control / LOCAL mode.		
Value:	0: Change master control for STW1.0 = 0 1: Change master control in operation		
Danger:	When changing the master control in operation, the drive can manifest undesirable behavior - e.g. it can accelerate up to another setpoint.		
			
r3986	Number of parameters / Param count		
All objects	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of parameters for this drive unit. The number comprises the device-specific and the drive-specific parameters.		
Dependency:	Refer to: r0980, r0981, r0989		
r3988[0...1]	Boot state / Boot_state		
CU_I, CU_I_D410	Can be changed: - Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10800	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Index 0: Displays the boot state. Index 1: Displays the partial boot state		
Value:	0: Not active 1: Fatal fault 10: Fault 20: Reset all parameters 30: Drive object modified 40: Download using commissioning software 50: Parameter download using commissioning software 90: Reset Control Unit and delete drive objects 100: Start initialization 101: Wait for topology input 110: Instantiate Control Unit basis 111: Insert drive object 112: Remove drive object 113: Change drive object number 114: Change component number 115: Parameter download using commissioning software 117: Remove component 150: Wait until actual topology determined 160: Evaluate topology 170: Instantiate Control Unit reset 180: Initialization YDB configuration information		

- 190: FW update for CU LINK slaves

2.2 List of parameters

p4031	BI: TB30 signal source for terminal DO 1 / TB30 s_src DO 1		
TB30	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9102
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DO 1 (X481.6) of the Terminal Board 30 (TB30).		
Note:	DO: Digital Output		

p4032	BI: TM15DI/DO signal source for terminal DI/DO 2 / TM15D s_s DI/DO 2		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9400
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 2 (X520.4) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.2 = 1). DI/DO: Bidirectional Digital Input/Output		

p4032	BI: TB30 signal source for terminal DO 2 / TB30 s_src DO 2		
TB30	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9102
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DO 2 (X481.7) of the Terminal Board 30 (TB30).		
Note:	DO: Digital Output		

p4033	BI: TM15DI/DO signal source for terminal DI/DO 3 / TM15D s_s DI/DO 3		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9400
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 3 (X520.5) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.3 = 1). DI/DO: Bidirectional Digital Input/Output		

p4033	BI: TB30 signal source for terminal DO 3 / TB30 s_src DO 3		
TB30	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9099, 9102
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DO 3 (X481.8) of the Terminal Board 30 (TB30).		
Note:	DO: Digital Output		

p4034	BI: TM15DI/DO signal source for terminal DI/DO 4 / TM15D s_s DI/DO 4		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9400
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 4 (X520.6) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.4 = 1). DI/DO: Bidirectional Digital Input/Output		

p4035	BI: TM15DI/DO signal source for terminal DI/DO 5 / TM15D s_s DI/DO 5		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9400
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 5 (X520.7) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.5 = 1). DI/DO: Bidirectional Digital Input/Output		

p4036	BI: TM15DI/DO signal source for terminal DI/DO 6 / TM15D s_s DI/DO 6		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9400
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 6 (X520.8) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.6 = 1). DI/DO: Bidirectional Digital Input/Output		

p4037	BI: TM15DI/DO signal source for terminal DI/DO 7 / TM15D s_s DI/DO 7		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9400
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 7 (X520.9) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.7 = 1). DI/DO: Bidirectional Digital Input/Output		

2 Parameters

2.2 List of parameters

p4038	BI: Signal source for terminal DI/DO 0 distributed / S_s DI/DO 0 dis		
SERVO (Dig IO)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 2201
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the distributed terminal DI/DO 0 (X3.2).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.0 = 1). DI/DO: Bidirectional Digital Input/Output		

p4038	BI: TM15DI/DO signal source for terminal DI/DO 8 / TM15D s_s DI/DO 8		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9401
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 8 (X521.2) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.8 = 1). DI/DO: Bidirectional Digital Input/Output		

p4038	BI: TM31 signal source for terminal DI/DO 8 / TM31 s_s DI/DO8		
TM31	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9549, 9560
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 8 (X541.2) of Terminal Module 31 (TM31).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.8 = 1). DI/DO: Bidirectional Digital Input/Output		

p4038	BI: TM41 signal source for terminal DI/DO 0 / TM41 s_s DI/DO 0		
TM41	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9661
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 0 (X521.1) of Terminal Module 41 (TM41).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.8 = 1). DI/DO: Bidirectional Digital Input/Output		

p4039	BI: Signal source for terminal DI/DO 1 distributed / S_s DI/DO 1 dis		
SERVO (Dig IO)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 2201
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the distributed terminal DI/DO 1 (X3.4).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.1 = 1). DI/DO: Bidirectional Digital Input/Output		

p4039	BI: TM15DI/DO signal source for terminal DI/DO 9 / TM15D s_s DI/DO 9		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9401
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 9 (X521.3) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.9 = 1). DI/DO: Bidirectional Digital Input/Output		

p4039	BI: TM31 signal source for terminal DI/DO 9 / TM31 S_src DI/DO9		
TM31	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9560
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 9 (X541.3) of Terminal Module 31 (TM31).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.9 = 1). DI/DO: Bidirectional Digital Input/Output		

p4039	BI: TM41 signal source for terminal DI/DO 1 / TM41 s_s DI/DO 1		
TM41	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9661
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 1 (X541.2) of Terminal Module 41 (TM41).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.9 = 1). DI/DO: Bidirectional Digital Input/Output		

2 Parameters

2.2 List of parameters

p4040	BI: TM15DI/DO signal source for terminal DI/DO 10 / TM15D s_s DI/DO 10		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9401
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 10 (X521.4) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.10 = 1). DI/DO: Bidirectional Digital Input/Output		

p4040	BI: TM31 signal source for terminal DI/DO 10 / TM31 S_src DI/DO10		
TM31	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9562
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 10 (X541.4) of Terminal Module 31 (TM31).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.10 = 1). DI/DO: Bidirectional Digital Input/Output		

p4040	BI: TM41 signal source for terminal DI/DO 2 / TM41 s_s DI/DO 2		
TM41	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9662
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 2 (X521.3) of Terminal Module 41 (TM41).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.10 = 1). DI/DO: Bidirectional Digital Input/Output		

p4041	BI: TM15DI/DO signal source for terminal DI/DO 11 / TM15D s_s DI/DO 11		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9401
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 11 (X521.5) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.11 = 1). DI/DO: Bidirectional Digital Input/Output		

p4041	BI: TM31 signal source for terminal DI/DO 11 / TM31 s_s DI/DO 11		
TM31	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9549, 9562
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 11 (X541.5) of Terminal Module 31 (TM31).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.11 = 1). DI/DO: Bidirectional Digital Input/Output		

p4041	BI: TM41 signal source for terminal DI/DO 3 / TM41 s_s DI/DO 3		
TM41	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9662
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 3 (X521.4) of Terminal Module 41 (TM41).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.11 = 1). DI/DO: Bidirectional Digital Input/Output		

p4042	BI: TM15DI/DO signal source for terminal DI/DO 12 / TM15D s_s DI/DO 12		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9401
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 12 (X521.6) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.12 = 1). DI/DO: Bidirectional Digital Input/Output		

p4043	BI: TM15DI/DO signal source for terminal DI/DO 13 / TM15D s_s DI/DO 13		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9401
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 13 (X521.7) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.13 = 1). DI/DO: Bidirectional Digital Input/Output		

2 Parameters

2.2 List of parameters

p4044	BI: TM15DI/DO signal source for terminal DI/DO 14 / TM15D s_s DI/DO 14			
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9401	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source for terminal DI/DO 14 (X521.8) of Terminal Module 15 (TM15).			
Note:	Prerequisite: The DI/DO must be set as an output (p4028.14 = 1). DI/DO: Bidirectional Digital Input/Output			
p4045	BI: TM15DI/DO signal source for terminal DI/DO 15 / TM15D s_s DI/DO 15			
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9401	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source for terminal DI/DO 15 (X521.9) of Terminal Module 15 (TM15).			
Note:	Prerequisite: The DI/DO must be set as an output (p4028.15 = 1). DI/DO: Bidirectional Digital Input/Output			
p4046	TM31 digital outputs limit current / TM31 DO limit curr			
TM31	Can be changed: T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: 9560	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	1	0	
Description:	Sets the limit for the total output voltage of terminals X541.1, X541.2, X541.3 and X541.4 (DI/DO 8 ... 11) of Terminal Module 31 (TM31).			
Value:	0: 0.1 A total current limit DI/DO 8 ... 11 1: 1.0 A total current limit DI/DO 8 ... 11			
Dependency:	Refer to: p4028			
Warning:	Since the sum of the output currents at terminals X541.1, X541.2, X541.3 and X541.4 is limited, an overcurrent or short circuit at one output terminal can cause a dip in the signal at the other terminals.			
				
r4047	Digital outputs status / DO status			
SERVO (Dig IO)	Can be changed: -	Calculated: -	Access level: 1	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 2201	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the status of digital outputs.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	DI/DO 0 distributed (X3.2)	High	Low
	01	DI/DO 1 distributed (X3.4)	High	Low
Note:	Inversion using p4048 has been taken into account. DI/DO: Bidirectional Digital Input/Output			

r4047 TM15DI/DO digital outputs status / TM15D DO status

TM15DI_DO	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9400, 9401, 9402
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status of the digital outputs of Terminal Module 15 (TM15).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI/DO 0 (X520.2)	High	Low	-
	01	DI/DO 1 (X520.3)	High	Low	-
	02	DI/DO 2 (X520.4)	High	Low	-
	03	DI/DO 3 (X520.5)	High	Low	-
	04	DI/DO 4 (X520.6)	High	Low	-
	05	DI/DO 5 (X520.7)	High	Low	-
	06	DI/DO 6 (X520.8)	High	Low	-
	07	DI/DO 7 (X520.9)	High	Low	-
	08	DI/DO 8 (X521.2)	High	Low	-
	09	DI/DO 9 (X521.3)	High	Low	-
	10	DI/DO 10 (X521.4)	High	Low	-
	11	DI/DO 11 (X521.5)	High	Low	-
	12	DI/DO 12 (X521.6)	High	Low	-
	13	DI/DO 13 (X521.7)	High	Low	-
	14	DI/DO 14 (X521.8)	High	Low	-
	15	DI/DO 15 (X521.9)	High	Low	-
	16	DI/DO 16 (X522.2)	High	Low	-
	17	DI/DO 17 (X522.3)	High	Low	-
	18	DI/DO 18 (X522.4)	High	Low	-
	19	DI/DO 19 (X522.5)	High	Low	-
	20	DI/DO 20 (X522.6)	High	Low	-
	21	DI/DO 21 (X522.7)	High	Low	-
	22	DI/DO 22 (X522.8)	High	Low	-
	23	DI/DO 23 (X522.9)	High	Low	-

Note: Inversion using p4048 has been taken into account.
The setting of the DI/DO as either input or output is of no significance (p4028).
DI/DO: Bidirectional Digital Input/Output

r4047 TM31 digital outputs status / TM31 DO status

TM31	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9556, 9560, 9562
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status of the digital outputs of Terminal Module 31 (TM31).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DO 0 (X542.1 - 3)	High	Low	-
	01	DO 1 (X542.4 - 6)	High	Low	-
	08	DI/DO 8 (X541.2)	High	Low	-
	09	DI/DO 9 (X541.3)	High	Low	-
	10	DI/DO 10 (X541.4)	High	Low	-
	11	DI/DO 11 (X541.5)	High	Low	-

Note: Inversion using p4048 has been taken into account.
The setting of the DI/DO as either input or output is of no significance (p4028).
DO: Digital Output
DI/DO: Bidirectional Digital Input/Output

r4047 **TM41 digital outputs status / TM41 DO status**

TM41	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status of the digital outputs of Terminal Module 41 (TM41).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	08	DI/DO 0 (X521.1)	High	Low	9661
	09	DI/DO 1 (X521.2)	High	Low	9661
	10	DI/DO 2 (X521.3)	High	Low	9662
	11	DI/DO 3 (X521.4)	High	Low	9662

Note: Inversion using p4048 has been taken into account.
 The setting of the DI/DO as either input or output is of no significance (p4028).
 DO: Digital Output
 DI/DO: Bidirectional Digital Input/Output

r4047 **TB30 digital outputs status / TB30 DO status**

TB30	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9102

p4056[0...1]		TM31 analog inputs type / TM31 AI type	
TM31	Can be changed: U, T Data type: Integer16 P-Group: Terminals Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5	Access level: 1 Func. diagram: 9566, 9568 Unit selection: - Expert list: 1 Factory setting 4
Description:	Sets the type of analog inputs of Terminal Module 31 (TM31). p4056[x] = 0, 4 correspond to a voltage input (r4052, p4057, p4059 are displayed in V). p4056[x] = 2, 3, 5 correspond to a current input (r4052, p4057, p4059 are displayed in mA). In addition, the associated switch S5 must be appropriately set. AI 0: S5.0 = V --> voltage input, S5.0 = I --> current input (burden resistor = 250 Ohm) AI 1: S5.1 = V --> voltage input, S5.1 = I --> current input (burden resistor = 250 Ohm)		
Value:	0: Unipolar voltage input (0 V ... +10 V) 2: Unipolar current input (0 mA ... +20 mA) 3: Unipolar current input monitored (+4 mA to +20 mA) 4: Bipolar voltage input (-10 V ... +10 V) 5: Bipolar current input (-20 mA to +20 mA)		
Index:	[0] = AI 0 (X521.1/X521.2, S5.0) [1] = AI 1 (X521.3/X521.4, S5.1)		
Warning:	The maximum voltage difference between the analog input terminals AI+, AI- and the ground of the TM31 (X520.6, X530.3) may not exceed 35 V. For operation with the load resistor switched in, the voltage between the differential inputs AI+ and AI- may not exceed 15 V or the impressed current of 60 mA; if this is not carefully observed, the input will be damaged.		
			
Notice:	For operation as a voltage input/current input, switch S5.0 or S5.1 must be appropriately set.		
Note:	When changing p4056, the parameters of the scaling characteristic (p4057, p4058, p4059, p4060) are overwritten with the following default values: For p4056 = 0, 4, p4057 is set to 0.0 V, p4058 to 0.0 %, p4059 to 10.0 V and p4060 to 100.0 %. For p4056 = 2, 5, p4057 is set to 0.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %. For p4056 = 3, p4057 is set to 4.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %.

	Min	Max	Factory setting
	0	1	0
Description:	Activates the absolute value generation for the analog outputs of Terminal Module 31 (TM31).		
Value:	0: No absolute value generation 1: Absolute value generation switched in		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		

p4075[0...1]	TB30 analog outputs activate absolute value generation / TB30 AO absVal act		
TB30	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 9106
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Activates the absolute value generation for the analog outputs of the Terminal Board 30 (TB30).		
Value:	0: No absolute value generation 1: Absolute value generation switched in		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		

p4076[0...1]	TM31 analog outputs type / TM31 AO type		
TM31	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4	4
Description:	Sets the type of analog outputs of Terminal Module 31 (TM31). p4076[x] = 1, 4 correspond to a voltage output (p4074, p4078, p4080, p4083 are displayed in V). p4076[x] = 0, 2, 3 correspond to a current output (p4074, p4078, p4080, p4083 are displayed in mA).		
Value:	0: Current output (0 mA ... +20 mA) 1: Voltage output (0 V ... +10 V) 2: Current output (+4 mA ... +20 mA) 3: Current output (-20 mA ... +20 mA) 4: Voltage output (-10 V ... +10 V)		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		

Dependency: Refer to: p4077, p4078, p4079, p4080
Note: When changing p4076, the parameters of the scaling characteristic (p4077, p4078, p4079, p4080) are overwritten with the following default values:
 For p4076 = 0, 3, p4077 is set to 0.0 %, p4078 to 0.0 mA, p4079 to 100.0 % and p4080 to 20.0 mA.
 For p4076 = 1, 4, p4077 is set to 0.0 %, p4078 to 0.0 V, p4079 to 100.0 % and p4080 to 10.0 V.
 For p4076 = 2, p4077 is set to 0.0 %, p4078 to 4.0 mA, p4079 to 100.0 % and p4080 to 20.0 mA.

r4076[0...1] **TB30 analog outputs type / TB30 AO type**

TB30 **Can be changed:** - **Calculated:** - **Access level:** 1

Min **Max** **Factory setting**
 -1000.00 [%] 1000.00 [%] 0.00 [%]

Description: Sets the scaling characteristic for the analog outputs of Terminal Module 31 (TM31).
 The scaling characteristic for the analog outputs is defined using 2 points.
 This parameter specifies the x coordinate (percentage) of the 1st value pair of the characteristic.

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
 [1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: Refer to: r4076, p4076
Notice: This parameter is automatically overwritten when changing p4076 (type of analog outputs).
Note: The parameters for the characteristic do not have a limiting effect.

p4077[0...1] **TB30 analog outputs characteristic value x1 / TB30 AO char x1**

TB30 **Can be changed:** U, T **Calculated:** - **Access level:** 2
Data type: FloatingPoint32 **Dyn. index:** - **Func. diagram:** 9106

	-11.000 [V]	11.000 [V]	10.000 [V]
Description:	Sets the scaling characteristic for the analog outputs of Terminal Board 30 (TB30). The scaling characteristic for the analog outputs is defined using 2 points. This parameter specifies the y coordinate (output voltage in V) of the 2nd value pair of the characteristic.		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		
Note:	The parameters for the characteristic do not have a limiting effect.		

2 Parameters

2.2 List of parameters

p4082[0...1]	BI: TM31 analog outputs invert signal source / TM31 AO inv s_src		
TM31	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to invert the analog output signals of Terminal Module 31 (TM31).		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		
p4082[0...1]	BI: TB30 analog outputs invert signal source / TB30 AO inv s_src		
TB30	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9106
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for inverting the analog output signals of the Terminal Board 30 (TB30).		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		
p4083[0...1]	TM31 analog outputs offset / TM31 AO offset		
TM31	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-20.000	20.000	0.000
Description:	Sets the offset for the analog outputs of Terminal Module 31 (TM31). The offset is added to the output signal after the scaling characteristic.		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		
Dependency:	The unit of this parameter (V or mA) depends on the analog input type. Refer to: r4076, p4076		
Note:	This means, for example, the offset of a downstream isolating amplifier can be compensated.		
p4083[0...1]	TB30 analog outputs offset / TB30 AO offset		
TB30	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9106
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.000	10.000	0.000
Description:	Sets the offset for the analog outputs of Terminal Board 30 (TB30). The offset is added to the output signal after the scaling characteristic.		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		

p4086	BI: TM15DI/DO signal source for terminal DI/DO 16 / TM15D s_s DI/DO 16		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9402
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 16 (X522.2) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.16 = 1). DI/DO: Bidirectional Digital Input/Output		
p4087	BI: TM15DI/DO signal source for terminal DI/DO 17 / TM15D s_s DI/DO 17		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9402
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 17 (X522.3) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.17 = 1). DI/DO: Bidirectional Digital Input/Output		
p4088	BI: TM15DI/DO signal source for terminal DI/DO 18 / TM15D s_s DI/DO 18		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9402
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 18 (X522.4) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.18 = 1). DI/DO: Bidirectional Digital Input/Output		
p4089	BI: TM15DI/DO signal source for terminal DI/DO 19 / TM15D s_s DI/DO 19		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9402
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 19 (X522.5) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.19 = 1). DI/DO: Bidirectional Digital Input/Output		

2 Parameters

2.2 List of parameters

p4090	BI: TM15DI/DO signal source for terminal DI/DO 20 / TM15D s_s DI/DO 20		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9402
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 20 (X522.6) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.20 = 1). DI/DO: Bidirectional Digital Input/Output		

p4091	BI: TM15DI/DO signal source for terminal DI/DO 21 / TM15D s_s DI/DO 21		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9402
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 21 (X522.7) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.21 = 1). DI/DO: Bidirectional Digital Input/Output		

p4092	BI: TM15DI/DO signal source for terminal DI/DO 22 / TM15D s_s DI/DO 22		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9402
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 22 (X522.8) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.22 = 1). DI/DO: Bidirectional Digital Input/Output		

p4093	BI: TM15DI/DO signal source for terminal DI/DO 23 / TM15D s_s DI/DO 23		
TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9402
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for terminal DI/DO 23 (X522.9) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.23 = 1). DI/DO: Bidirectional Digital Input/Output		

r4094.0...23 BO: TM15 digital inputs status inverted raw data internal / TM15 DI st raw dat

TM15DI_DO	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the inverted status of the raw data of the digital inputs of the Terminal Module 15 (TM15).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI/DO 0 (X520.2)	High	Low	-
	01	DI/DO 1 (X520.3)	High	Low	-
	02	DI/DO 2 (X520.4)	High	Low	-
	03	DI/DO 3 (X520.5)	High	Low	-
	04	DI/DO 4 (X520.6)	High	Low	-
	05	DI/DO 5 (X520.7)	High	Low	-
	06	DI/DO 6 (X520.8)	High	Low	-
	07	DI/DO 7 (X520.9)	High	Low	-
	08	DI/DO 8 (X521.2)	High	Low	-
	09	DI/DO 9 (X521.3)	High	Low	-
	10	DI/DO 10 (X521.4)	High	Low	-
	11	DI/DO 11 (X521.5)	High	Low	-
	12	DI/DO 12 (X521.6)	High	Low	-
	13	DI/DO 13 (X521.7)	High	Low	-
	14	DI/DO 14 (X521.8)	High	Low	-
	15	DI/DO 15 (X521.9)	High	Low	-
	16	DI/DO 16 (X522.2)	High	Low	-
	17	DI/DO 17 (X522.3)	High	Low	-
	18	DI/DO 18 (X522.4)	High	Low	-
	19	DI/DO 19 (X522.5)	High	Low	-
	20	DI/DO 20 (X522.6)	High	Low	-
	21	DI/DO 21 (X522.7)	High	Low	-
	22	DI/DO 22 (X522.8)	High	Low	-
	23	DI/DO 23 (X522.9)	High	Low	-

Notice: The raw data of the digital inputs is directly displayed (e.g. without any debounce).

Note: Should only used for internal Siemens purposes (alternative r4022, r4023).

p4095 S120M digital inputs simulation mode / S120M DI sim_mode

SERVO (Dig IO)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the simulation mode for digital inputs of the S120M.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI/DO 0 distributed (X3.2)	Simulation	Terminal eval	-
	01	DI/DO 1 distributed (X3.4)	Simulation	Terminal eval	-

Dependency: The setpoint for the input signals is specified using p4096.

Refer to: p4096

Note: This parameter is not saved when data is backed-up (p0971, p0977).

DI: Digital Input

p4095	TM15DI/DO digital inputs simulation mode / TM15D DI sim_mode		
TM15DI_DO	Can be changed: U, T Data type: Unsigned32	Calculated: - Dyn. index: -	Access level: 2 Func. diagram: 9400, 9401, 9402
	P-Group: Terminals Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min -	Max -	Factory setting 0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the simulation mode for the digital inputs of Terminal Module 15 (TM15).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI/DO 0 (X520.2)	Simulation	Terminal eval	-
	01	DI/DO 1 (X520.3)	Simulation	Terminal eval	-
	02	DI/DO 2 (X520.4)	Simulation	Terminal eval	-
	03	DI/DO 3 (X520.5)	Simulation	Terminal eval	-
	04	DI/DO 4 (X520.6)	Simulation	Terminal eval	-
	05	DI/DO 5 (X520.7)	Simulation	Terminal eval	-
	06	DI/DO 6 (X520.8)	Simulation	Terminal eval	-
	07	DI/DO 7 (X520.9)	Simulation	Terminal eval	-
	08	DI/DO 8 (X521.2)	Simulation	Terminal eval	-
	09	DI/DO 9 (X521.3)	Simulation	Terminal eval	-
	10	DI/DO 10 (X521.4)	Simulation	Terminal eval	-
	11	DI/DO 11 (X521.5)	Simulation	Terminal eval	-
	12	DI/DO 12 (X521.6)	Simulation	Terminal eval	-
	13	DI/DO 13 (X521.7)	Simulation	Terminal eval	-
	14	DI/DO 14 (X521.8)	Simulation	Terminal eval	-
	15	DI/DO 15 (X521.9)	Simulation	Terminal eval	-
	16	DI/DO 16 (X522.2)	Simulation	Terminal eval	-
	17	DI/DO 17 (X522.3)	Simulation	Terminal eval	-
	18	DI/DO 18 (X522.4)	Simulation	Terminal eval	-
	19	DI/DO 19 (X522.5)	Simulation	Terminal eval	-
	20	DI/DO 20 (X522.6)	Simulation	Terminal eval	-
	21	DI/DO 21 (X522.7)	Simulation	Terminal eval	-
	22	DI/DO 22 (X522.8)	Simulation	Terminal eval	-
	23	DI/DO 23 (X522.9)	Simulation	Terminal eval	-

Dependency: The setpoint for the input signals is specified using p4096.
Refer to: p4096

Warning:  A drive that is moved by simulating the inputs of a Terminal Module is brought to a standstill while the Terminal Module is being activated or deactivated.

Note: This parameter is not saved when data is backed-up (p0971, p0977).
DI/DO: Bidirectional Digital Input/Output

p4095	TM31 digital inputs simulation mode / TM31 DI sim_mode		
TM31	Can be changed: U, T Data type: Unsigned32	Calculated: - Dyn. index: -	Access level: 2 Func. diagram: 9549, 9550, 9552, 9560, 9562
	P-Group: Terminals Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min -	Max -	Factory setting 0000 0000 0000 0000 bin

Description: Sets the simulation mode for the digital inputs of Terminal Module 31 (TM31).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X520.1)	Simulation	Terminal eval	-
	01	DI 1 (X520.2)	Simulation	Terminal eval	-
	02	DI 2 (X520.3)	Simulation	Terminal eval	-
	03	DI 3 (X520.4)	Simulation	Terminal eval	-
	04	DI 4 (X530.1)	Simulation	Terminal eval	-
	05	DI 5 (X530.2)	Simulation	Terminal eval	-

06	DI 6 (X530.3)	Simulation	Terminal eval	-
07	DI 7 (X530.4)	Simulation	Terminal eval	-
08	DI/DO 8 (X541.2)	Simulation	Terminal eval	-
09	DI/DO 9 (X541.3)	Simulation	Terminal eval	-
10	DI/DO 10 (X541.4)	Simulation	Terminal eval	-
11	DI/DO 11 (X541.5)	Simulation	Terminal eval	-

Dependency: The setpoint for the input signals is specified using p4096.

Refer to: p4096

Warning:

A drive that is moved by simulating the inputs of a Terminal Module is brought to a standstill while the Terminal Module is being activated or deactivated.

Note:

This parameter is not saved when data is backed-up (p0971, p0977).

DI: Digital Input

DI/DO: Bidirectional Digital Input/Output

p4095 TM41 digital inputs simulation mode / TM41 DI sim_mode

TM41	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 bin

Description: Sets the simulation mode for the digital inputs of Terminal Module 41 (TM41).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X522.1)	Simulation	Terminal eval	9660
	01	DI 1 (X522.2)	Simulation	Terminal eval	9660
	02	DI 2 (X522.3)	Simulation	Terminal eval	9660
	03	DI 3 (X522.4)	Simulation	Terminal eval	9660
	08	DI/DO 0 (X521.1)	Simulation	Terminal eval	9661
	09	DI/DO 1 (X521.2)	Simulation	Terminal eval	9661
	10	DI/DO 2 (X521.3)	Simulation	Terminal eval	9662
	11	DI/DO 3 (X521.4)	Simulation	Terminal eval	9662

Dependency: The setpoint for the input signals is specified using p4096.

Refer to: p4096

Warning:

A drive that is moved by simulating the inputs of a Terminal Module is brought to a standstill while the Terminal Module is being activated or deactivated.

Note:

This parameter is not saved when data is backed-up (p0971, p0977).

DI: Digital Input

DI/DO: Bidirectional Digital Input/Output

p4095 TB30 digital inputs simulation mode / TB30 DI sim_mode

TB30	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9099, 9100
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the simulation mode for the digital inputs of the Terminal Board 30 (TB30).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X481.1)	Simulation	Terminal eval	-
	01	DI 1 (X481.2)	Simulation	Terminal eval	-
	02	DI 2 (X481.3)	Simulation	Terminal eval	-
	03	DI 3 (X481.4)	Simulation	Terminal eval	-

Dependency: The setpoint for the input signals is specified using p4096.

Refer to: p4096

2 Parameters

2.2 List of parameters

Warning:

A drive that is moved by simulating the inputs of a Terminal Board is brought to a standstill while the Terminal Module is being activated or deactivated.

Note:

This parameter is not saved when data is backed-up (p0971, p0977).
DI: Digital Input

p4096

S120M digital inputs simulation mode setpoint / S120M DI sim setp

SERVO (Dig IO)

Can be changed: U, T	Calculated: -	Access level: 2
Data type: Unsigned32	Dyn. index: -	Func. diagram: -
P-Group: Commands	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
-	-	0000 bin

Description:

Sets the setpoint for the input signals in the digital input simulation mode of the S120M.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI/DO 0 distributed (X3.2)	High	Low	2201
01	DI/DO 1 distributed (X3.4)	High	Low	2201

Dependency:

The simulation of a digital input is selected using p4095.
Refer to: p4095

Note:

This parameter is not saved when data is backed-up (p0971, p0977).
DI: Digital Input

p4096

TM15DI/DO digital inputs simulation mode, setpoint / TM15D DI sim setp

TM15DI_DO

Can be changed: U, T	Calculated: -	Access level: 2
Data type: Unsigned32	Dyn. index: -	Func. diagram: 9400, 9401, 9402
P-Group: Terminals	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description:

Sets the setpoint for the input signals in the simulation mode of the digital inputs of Terminal Module 15 (TM15).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI/DO 0 (X520.2)	High	Low	-
01	DI/DO 1 (X520.3)	High	Low	-
02	DI/DO 2 (X520.4)	High	Low	-
03	DI/DO 3 (X520.5)	High	Low	-
04	DI/DO 4 (X520.6)	High	Low	-
05	DI/DO 5 (X520.7)	High	Low	-
06	DI/DO 6 (X520.8)	High	Low	-
07	DI/DO 7 (X520.9)	High	Low	-
08	DI/DO 8 (X521.2)	High	Low	-
09	DI/DO 9 (X521.3)	High	Low	-
10	DI/DO 10 (X521.4)	High	Low	-
11	DI/DO 11 (X521.5)	High	Low	-
12	DI/DO 12 (X521.6)	High	Low	-
13	DI/DO 13 (X521.7)	High	Low	-
14	DI/DO 14 (X521.8)	High	Low	-
15	DI/DO 15 (X521.9)	High	Low	-
16	DI/DO 16 (X522.2)	High	Low	-
17	DI/DO 17 (X522.3)	High	Low	-
18	DI/DO 18 (X522.4)	High	Low	-
19	DI/DO 19 (X522.5)	High	Low	-
20	DI/DO 20 (X522.6)	High	Low	-
21	DI/DO 21 (X522.7)	High	Low	-
22	DI/DO 22 (X522.8)	High	Low	-
23	DI/DO 23 (X522.9)	High	Low	-

Dependency:

The simulation of a digital input is selected using p4095.
Refer to: p4095

Note: This parameter is not saved when data is backed-up (p0971, p0977).
DI/DO: Bidirectional Digital Input/Output

p4096 TM31 digital inputs simulation mode setpoint / TM31 DI sim setp

TM31	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9549, 9550, 9552, 9560, 9562
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 bin

Description: Sets the setpoint for the input signals in the simulation mode of the digital inputs of Terminal Module 31 (TM31).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X520.1)	High	Low	-
	01	DI 1 (X520.2)	High	Low	-
	02	DI 2 (X520.3)	High	Low	-
	03	DI 3 (X520.4)	High	Low	-
	04	DI 4 (X530.1)	High	Low	-
	05	DI 5 (X530.2)	High	Low	-
	06	DI 6 (X530.3)	High	Low	-
	07	DI 7 (X530.4)	High	Low	-
	08	DI/DO 8 (X541.2)	High	Low	-
	09	DI/DO 9 (X541.3)	High	Low	-
	10	DI/DO 10 (X541.4)	High	Low	-
	11	DI/DO 11 (X541.5)	High	Low	-

Dependency: The simulation of a digital input is selected using p4095.
Refer to: p4095

Note: This parameter is not saved when data is backed-up (p0971, p0977).
DI: Digital Input
DI/DO: Bidirectional Digital Input/Output

p4096 TM41 digital inputs simulation mode setpoint / TM41 DI sim setp

TM41	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 bin

Description: Sets the setpoint for the input signals in the simulation mode of the digital inputs of Terminal Module 41 (TM41).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X522.1)	High	Low	9660
	01	DI 1 (X522.2)	High	Low	9660
	02	DI 2 (X522.3)	High	Low	9660
	03	DI 3 (X522.4)	High	Low	9660
	08	DI/DO 0 (X521.1)	High	Low	9661
	09	DI/DO 1 (X521.2)	High	Low	9661
	10	DI/DO 2 (X521.3)	High	Low	9662
	11	DI/DO 3 (X521.4)	High	Low	9662

Dependency: The simulation of a digital input is selected using p4095.
Refer to: p4095

Note: This parameter is not saved when data is backed-up (p0971, p0977).
DI: Digital Input
DI/DO: Bidirectional Digital Input/Output

p4096 TB30 digital inputs simulation mode setpoint / TB30 DI sim setpt

<p>Can be changed: U, T</p> <p>Data type: Unsigned32</p> <p>P-Group: Commands</p> <p>Not for motor type: -</p> <p>Min</p> <p>-</p>	<p>Calculated: -</p> <p>Dyn. index: -</p> <p>Unit group: -</p> <p>Scaling: -</p> <p>Max</p> <p>-</p>	<p>Access level: 2</p> <p>Func. diagram: 9099, 9100</p> <p>Unit selection: -</p> <p>Expert list: 1</p> <p>Factory setting</p> <p>0000 bin</p>
--	--	---

Description: Sets the setpoint for the input signals in the simulation mode of the digital inputs of the Terminal Board 30 (TB30).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X481.1)	High	Low	-
	01	DI 1 (X481.2)	High	Low	-
	02	DI 2 (X481.3)	High	Low	-
	03	DI 3 (X481.4)	High	Low	-

Dependency: The simulation of a digital input is selected using p4095.

Refer to: p4095

Note: This parameter is not saved when data is backed-up (p0971, p0977).

DI: Digital Input

p4097[0...1] TM31 analog inputs simulation mode / TM31 AI sim_mode

<p>Can be changed: U, T</p> <p>Data type: Integer16</p> <p>P-Group: Terminals</p> <p>Not for motor type: -</p> <p>Min</p> <p>0</p>	<p>Calculated: -</p> <p>Dyn. index: -</p> <p>Unit group: -</p> <p>Scaling: -</p> <p>Max</p> <p>1</p>	<p>Access level: 2</p> <p>Func. diagram: 9566, 9568</p> <p>Unit selection: -</p> <p>Expert list: 1</p> <p>Factory setting</p> <p>0</p>
--	--	--

Description: Sets the simulation mode for the analog inputs of Terminal Module 31 (TM31).

Value: 0: Terminal evaluation for analog input x

1: Simulation for analog input x

Index: [0] = AI 0 (X521.1/X521.2, S5.0)

[1] = AI 1 (X521.3/X521.4, S5.1)

Dependency: The setpoint for the input voltage is specified via p4098.

Refer to: p4098

Note: This parameter is not saved when data is backed-up (p0971, p0977).

AI: Analog Input

p4097[0] TM41 analog input simulation mode / TM41 AI sim_mode

<p>Can be changed: U, T</p> <p>Data type: Integer16</p> <p>P-Group: Terminals</p> <p>Not for motor type: -</p> <p>Min</p> <p>0</p>	<p>Calculated: -</p> <p>Dyn. index: -</p> <p>Unit group: -</p> <p>Scaling: -</p> <p>Max</p> <p>1</p>	<p>Access level: 2</p> <p>Func. diagram: 9663</p> <p>Unit selection: -</p> <p>Expert list: 1</p> <p>Factory setting</p> <p>0</p>
--	--	--

Description: Sets the simulation mode for the analog input of Terminal Module 41 (TM41).

Value: 0: Terminal evaluation for analog input x

1: Simulation for analog input x

Index: [0] = AI 0 (X523.1/X523.2)

Dependency: The setpoint for the input voltage is specified via p4098.

Refer to: p4098

Note: This parameter is not saved when data is backed-up (p0971, p0977).

AI: Analog Input

p4097[0...1]		TB30 analog inputs simulation mode / TB30 AI sim_mode		
TB30	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: 9104	
	P-Group: Terminals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	1	0	
Description:	Sets the simulation mode for the analog inputs of the Terminal Board 30 (TB30).			
Value:	0: Terminal evaluation for analog input x 1: Simulation for analog input x			
Index:	[0] = AI 0 (X482.1/X482.2) [1] = AI 1 (X482.3/X482.4)			
Dependency:	The setpoint for the input voltage is specified via p4098. Refer to: p4098			
Note:	This parameter is not saved when data is backed-up (p0971, p0977). AI: Analog Input			
p4098[0...1]		TM31 analog inputs simulation mode setpoint / TM31 AI sim setp		
TM31	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9566, 9568	
	P-Group: Terminals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-20.000	20.000	0.000	
Description:	Sets the setpoint for the input value in simulation mode of the analog inputs of Terminal Module 31 (TM31).			
Index:	[0] = AI 0 (X521.1/X521.2, S5.0) [1] = AI 1 (X521.3/X521.4, S5.1)			
Dependency:	The simulation of an analog input is selected using p4097. If AI x is parameterized as voltage input (p4056), then the setpoint is a voltage in V. If AI x is parameterized as current input (p4056), then the setpoint is a current in mA. Refer to: r4056, p4056, p4097			
Note:	This parameter is not saved when data is backed-up (p0971, p0977). AI: Analog Input			
p4098[0]		TM41 analog input simulation mode setpoint / TM41 AI sim setp		
TM41	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9663	
	P-Group: Terminals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-20.000 [V]	20.000 [V]	0.000 [V]	
Description:	Sets the setpoint for the input value in simulation mode of the analog input of Terminal Module 41 (TM41).			
Index:	[0] = AI 0 (X523.1/X523.2)			
Dependency:	The simulation of the analog input is selected using p4097. If AI x is parameterized as voltage input (p4056), then the setpoint is a voltage in V. If AI x is parameterized as current input (p4056), then the setpoint is a current in mA. Refer to: p4097			
Note:	This parameter is not saved when data is backed-up (p0971, p0977). AI: Analog Input			

2 Parameters

2.2 List of parameters

p4098[0...1]	TB30 analog inputs simulation mode setpoint / TB30 AI sim setp		
TB30	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min -11.000 [V]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 11.000 [V]	Access level: 2 Func. diagram: 9104 Unit selection: - Expert list: 1 Factory setting 0.000 [V]
Description:	Sets the setpoint for the input voltage in the simulation mode of the analog inputs of Terminal Board 30 (TB30).		
Index:	[0] = AI 0 (X482.1/X482.2) [1] = AI 1 (X482.3/X482.4)		
Dependency:	The simulation of an analog input is selected using p4097. Refer to: p4097		
Note:	This parameter is not saved when data is backed-up (p0971, p0977). AI: Analog Input		

p4099	Inputs/outputs sampling time / I/O t_sampl		
SERVO (Dig IO)	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 125.00 [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5000.00 [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 4000.00 [µs]
Description:	Sets the sampling time for the inputs and outputs.		
Dependency:	The parameter can only be modified for p0009 = 3, 29. The sampling times can only be set as an integer multiple of the SERVO clock cycle (p0115). Refer to: p0009		
Note:	The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).		

p4099	TM15 inputs/outputs sampling time / TM15 I/O t_sample		
TM15	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 31.25 [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 500.00 [µs]	Access level: 3 Func. diagram: 9389 Unit selection: - Expert list: 1 Factory setting 125.00 [µs]
Description:	The sampling time of the Terminal Module 15 (TM15) is determined by the DRIVE-CLiQ clock cycle of the line to which the component is attached. It is not possible to specify this using p4099. When switching on, parameter p4099 is correctly set to the resulting sampling time.		

p4099	TM15DI/DO inputs/outputs sampling time / TM15D I/O t_sampl		
TM15DI_DO	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0.00 [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5000.00 [µs]	Access level: 3 Func. diagram: 9399, 9400 Unit selection: - Expert list: 1 Factory setting 4000.00 [µs]
Description:	Sets the sampling time for the inputs and outputs of Terminal Module 15 (TM15).		
Dependency:	The parameter can only be modified for p0009 = 3, 29. The following applies for the sampling time: The sampling times at a DRIVE-CLiQ line must be integral multiples of one another.		

The sampling times of this TM must be an integral multiple of a servo or vector drive that exists in the system.
The minimum permissible sampling time is 125 µs.
Refer to: p0009, r0110, r0111

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).
Parameter p4099[0] must never be equal to zero.

p4099 TM17 inputs/outputs sampling time / TM17 I/O t_sample

TM17	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9419
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	31.25 [µs]	500.00 [µs]	125.00 [µs]

Description: The sampling time of the Terminal Module 17 (TM17) is determined by the DRIVE-CLiQ clock cycle of the line to which the component is attached.
It is not possible to specify this using p4099.
When switching on, parameter p4099 is correctly set to the resulting sampling time.

p4099[0...2] TM31 inputs/outputs sampling time / TM31 I/O t_sample

TM31	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9549, 9550
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	5000.00 [µs]	4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Module 31 (TM31).

Index: [0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.

The following applies for the sampling time:

The sampling times at a DRIVE-CLiQ line must be integral multiples of one another.

The sampling times of this TM must be an integral multiple of a servo or vector drive that exists in the system.

The minimum permissible sampling time is 125 µs.

The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).

Refer to: p0009, r0110, r0111

Notice: The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).
Parameter p4099[0] must never be equal to zero.

p4099[0...3]		TM41 inputs/outputs sampling time / TM41 I/O t_sample		
TM41	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0.00 [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5000.00 [µs]	Access level: 3 Func. diagram: 9659, 9660 Unit selection: - Expert list: 1 Factory setting [0] 4000.00 [µs] [1] 4000.00 [µs] [2] 0.00 [µs] [3] 125.00 [µs]	
Description:	Sets the sampling time for the inputs and outputs of Terminal Module 41 (TM41).			
Index:	[0] = Digital inputs/outputs (DI/DO) [1] = Analog inputs (AI) [2] = Not present [3] = Incremental encoder emulation			
Dependency:	The parameter can only be modified for p0009 = 3, 29. The sampling times can only be set as an integer multiple of the DRIVE-CLiQ clock cycle. The minimum permissible sampling time is 125 µs. Refer to: p0009, r0110, r0111 Refer to: A35228			
Note:	The value of the sampling time of the incremental encoder emulation p4099[3] can be pre-set in both operating modes (p4400). The next time that the system boots, the validity of the value is checked. For an invalid value, message F35228 and/or A01223 is output. The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0). The sampling time of a TM41 in the SINAMICS mode (p4400 = 1) must be the same as that of the emulated encoder. The sampling time of a TM41 in the SIMOTION mode (p4400 = 0) is determined by the topology used			
p4099[0...2]		TB30 inputs/outputs sampling time / TB30 I/O t_sample		
TB30	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0.00 [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5000.00 [µs]	Access level: 3 Func. diagram: 9099, 9100 Unit selection: - Expert list: 1 Factory setting [0] 4000.00 [µs] [1] 4000.00 [µs] [2] 4000.00 [µs]	
Description:	Sets the sampling time for the inputs and outputs of Terminal Board 30 (TB30).			
Index:	[0] = Digital inputs/outputs (DI/DO) [1] = Analog inputs (AI) [2] = Analog outputs (AO)			
Dependency:	The parameter can only be modified for p0009 = 3, 29. The sampling times can only be set as an integer multiple of the lowest basic sampling time (r0110[0]). Refer to: p0009, r0110, r0111			
Note:	The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0). For clock cycle synchronous PROFIBUS operation, the TB30 hardware (e.g. analog/digital converter) is operated with the PROFIBUS clock cycle (r2064[1]). This clock cycle is also kept after the PROFIBUS connection has been exited up to the next time that the Control Unit is switched off. In this case, a faster sampling time than the PROFIBUS clock cycle is not practical in p4099[0...2].			

p4100	Spindle supplementary temperature sensor type / Supp_temp sens typ		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	0
Description:	Sets the sensor type to evaluate the spindle supplementary temperature.		
Value:	0: Evaluation disabled 2: KTY84 6: PT1000		
Dependency:	Refer to: p4102, p4103, r4104, r4105, r4107		
p4100[0...3]	TM120 temperature evaluation, sensor type / TM120 sensor type		
TM120	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9605, 9606
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	1
Description:	Sets the sensor type for temperature evaluation via Terminal Module 120 (TM120). This means that the temperature sensor type is selected and the evaluation is switched in.		
Value:	0: Evaluation disabled 1: PTC thermistor 2: KTY84 4: Bimetallic NC contact 6: PT1000		
Index:	[0] = Temperature channel 0 [1] = Temperature channel 1 [2] = Temperature channel 2 [3] = Temperature channel 3		
Notice:	For p4102[0...7] = 251 °C, evaluation of the corresponding threshold is deactivated. For sensor type "PTC thermistor" (p4100[0...3] = 1), the following applies: To activate the corresponding alarm or fault, p4102[0...7] must be set <= 250 °C.		
Note:	The temperature sensors are connected to the following terminals: X521.2(+) and X521.1(-) = channel 0 X521.4(+) and X521.3(-) = channel 1 X521.6(+) and X521.5(-) = channel 2 X521.8(+) and X521.7(-) = channel 3		
p4100[0...11]	TM150 sensor type / TM150 sensor type		
TM150	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9626, 9627
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	5
Description:	Sets the sensor type for Terminal Module 150 (TM150) This means that the temperature sensor type is selected and the evaluation is switched in.		
Value:	0: Evaluation disabled 1: PTC thermistor 2: KTY84 4: Bimetallic NC contact 5: PT100 6: PT1000		

2 Parameters

2.2 List of parameters

Index: [0] = Temperature channel 0
 [1] = Temperature channel 1
 [2] = Temperature channel 2
 [3] = Temperature channel 3
 [4] = Temperature channel 4
 [5] = Temperature channel 5
 [6] = Temperature channel 6
 [7] = Temperature channel 7
 [8] = Temperature channel 8
 [9] = Temperature channel 9
 [10] = Temperature channel 10
 [11] = Temperature channel 11

Notice: For p4102[0...23] = 251 °C, evaluation of the corresponding threshold is deactivated.
 For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:
 To activate the corresponding alarm or fault, p4102[0...23] must be set <= 250 °C.

Note: The temperature sensors are connected to the following terminals:
 X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6)
 X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7)
 X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8)
 X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)
 X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)
 X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)
 Details on the wiring are included in the parameter description for p4108.

p4100	TM31 sensor type / TM31 sensor type		
TM31	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9576
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	0
Description:	Sets the sensor type for Terminal Module 31 (TM31) This means that the temperature sensor type is selected and the evaluation is switched in.		
Value:	0: Evaluation disabled 1: PTC thermistor 2: KTY84 6: PT1000		
Notice:	For p4102[0...1] = 251 °C, evaluation of the corresponding threshold is deactivated. For sensor type "PTC thermistor" (p4100 = 1), the following applies: To activate the corresponding alarm or fault, p4102[0...1] must be set <= 250 °C.		
Note:	The temperature sensor is connected at terminals X522.7(+) and X522.8(-).		

r4101[0...3]	TM120 sensor resistance / TM120 R_sensor		
TM120	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9605, 9606
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the actual resistance value of the temperature sensor connected at the Terminal Module.		
Index:	[0] = Temperature channel 0 [1] = Temperature channel 1 [2] = Temperature channel 2 [3] = Temperature channel 3		

Note: The maximum measurable resistance value is approx. 1720 Ohm.
 The temperature sensors are connected to the following terminals:
 X521.2(+) and X521.1(-) = channel 0
 X521.4(+) and X521.3(-) = channel 1
 X521.6(+) and X521.5(-) = channel 2
 X521.8(+) and X521.7(-) = channel 3

r4101[0...11] TM150 sensor resistance / TM150 R_sensor

TM150	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9626, 9627
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]

Description: Displays the actual resistance value of the temperature sensor connected at the Terminal Module.

Index:
 [0] = Temperature channel 0
 [1] = Temperature channel 1
 [2] = Temperature channel 2
 [3] = Temperature channel 3
 [4] = Temperature channel 4
 [5] = Temperature channel 5
 [6] = Temperature channel 6
 [7] = Temperature channel 7
 [8] = Temperature channel 8
 [9] = Temperature channel 9
 [10] = Temperature channel 10
 [11] = Temperature channel 11

Note: The maximum measurable resistance value is approx. 2500 Ohm.
 For 1x2 and 2x2 wire evaluation:
 The actual sensor resistance is displayed in this parameter(i.e. the wire resistance (p4110) is taken into account).
 The temperature sensors are connected to the following terminals:
 X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6)
 X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7)
 X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8)
 X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)
 X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)
 X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)
 Details on the wiring are included in the parameter description for p4108.

r4101 TM31 sensor resistance / TM31 R_sensor

TM31	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9576
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]

Description: Displays the actual resistance value of the temperature sensor connected at the Terminal Module.

Note: The maximum measurable resistance value is approx. 1720 Ohm.
 The temperature sensor is connected at terminals X522.7(+) and X522.8(-).

p4102[0...1]	Spindle supplementary temperature fault threshold/alarm thresh. / Suppl_temp F/A_thr		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-300.0 [°C]	9999.0 [°C]	[0] 120.0 [°C] [1] 155.0 [°C]
Description:	Sets the fault threshold/alarm threshold for the temperature evaluation of the spindle. Temperature actual value r4105 > p4102[0] --> alarm A07017 is initiated. Temperature actual value r4105 > p4102[1] --> fault F07018 is initiated.		
Index:	[0] = Alarm threshold [1] = Fault threshold		
Dependency:	Refer to: p4100, r4104, r4105 Refer to: A07017, F07018		
Note:	For A07017 the following applies: - Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[0] - hysteresis). For F07018 the following applies: - Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[1] - hysteresis) and the fault has been acknowledged. - the hysteresis is 2 K and cannot be changed by the user.		

p4102[0...7]	TM120 fault threshold/alarm threshold / TM120 F/A_thresh		
TM120	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9605, 9606
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-48 [°C]	251 [°C]	251 [°C]
Description:	Sets the fault threshold/alarm threshold for Terminal Module 120 (TM120). A35211 is initiated, if the temperature actual value r4105[0] > p4102[0] F35207 is initiated if the temperature actual value r4105[0] > p4102[1] or timer p4103[0] has expired A35212 is initiated, if the temperature actual value r4105[1] > p4102[2] F35208 is initiated if the temperature actual value r4105[1] > p4102[3] or timer p4103[1] has expired A35213 is initiated, if the temperature actual value r4105[2] > p4102[4] F35209 is initiated if the temperature actual value r4105[2] > p4102[5] or timer p4103[2] has expired A35214 is initiated, if the temperature actual value r4105[3] > p4102[6] F35210 is initiated if the temperature actual value r4105[3] > p4102[7] or timer p4103[3] has expired For alarms A35211, A35212, A35213, A35214 the following applies: - Remains until the temperature actual value (r4105[0...3]) reaches or falls below the value (p4102[0, 2, 4, 6] - hysteresis). For fault F35207, F35208, F35209, F35210 the following applies: - Remains until the temperature actual value (r4105[0...3]) reaches or falls below the value (p4102[1, 3, 5, 7] - hysteresis) and the fault has been acknowledged. - the hysteresis value is 5 K and cannot be changed.		
Index:	[0] = Channel 0 alarm threshold (A35211) [1] = Channel 0 fault threshold (F35207) [2] = Channel 1 alarm threshold (A35212) [3] = Channel 1 fault threshold (F35208) [4] = Channel 2 alarm threshold (A35213) [5] = Channel 2 fault threshold (F35209) [6] = Channel 3 alarm threshold (A35214) [7] = Channel 3 fault threshold (F35210)		
Dependency:	Refer to: p4103		

Notice: Fault F35207 ... F35210 only causes the drive to shut down if there is at least one BICO interconnection between the drive and TM120.

For p4102[0...7] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100[0...3] = 1), the following applies:

To activate the corresponding alarm or fault, p4102[0...7] must be set ≤ 250 °C.

Note: The temperature sensor is connected to the following terminals:

X521.2(+) and X521.1(-) = channel 0

X521.4(+) and X521.3(-) = channel 1

X521.6(+) and X521.5(-) = channel 2

X521.8(+) and X521.7(-) = channel 3

p4102[0...23] TM150 fault threshold/alarm threshold / TM150 F/A_thresh

TM150	Can be changed: U, T	Calculated: -	Access level: 1

	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-99 [°C]	251 [°C]	251 [°C]

Description: Sets the fault threshold/alarm threshold for Terminal Module 150 (TM150).

For alarms (even indices [0, 2, 4 ... 22]), the following applies:

- the corresponding alarm is initiated, if the temperature actual value associated with a temperature channel exceeds the associated alarm threshold (r4105[x] > p4102[2x]). In addition, the timer is started (p4103[x]).

- the alarm remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x] - hysteresis (p4118[x])).

For faults (uneven indices [1, 3, 5 ... 23]), the following applies:

- the corresponding fault is initiated, if the temperature actual value associated with a temperature channel exceeds the associated fault threshold (r4105[x] > p4102[2x+1]) or the associated timer (p4103[x]) has expired.

- the fault remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x+1]) - hysteresis (p4118[x]) and the fault has been acknowledged.

- [22] = Channel 11 alarm threshold (A35417)
- [23] = Channel 11 fault threshold (F35407)

Dependency: Refer to: p4103, r4104, r4105, p4118

Notice: Faults F35207 ... F35210 and F35400 ... F35407 only result in the drive being shut down if at least one BICO interconnection exists between the drive and the TM150.

For p4102[0...23] = 251 °C, evaluation of the corresponding threshold is deactivated.

2 Parameters

2.2 List of parameters

For sensor type "PTC thermistor" (p4100[0...11] = 1), the following applies:
To activate the corresponding alarm or fault, p4102[0...23] must be set ≤ 250 °C.
Note: The hysteresis can be set in p4118[0...11].

p4102[0...1]	TM31 fault threshold/alarm threshold / TM31 F/A_thresh		
TM31	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9576
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-48 [°C]	251 [°C]	[0] 100 [°C] [1] 120 [°C]

Description: Sets the fault threshold/alarm threshold for Terminal Module 31 (TM31).
A35211 is initiated, if the temperature actual value r4105[0] > p4102[0]
F35207 is initiated if the temperature actual value r4105[0] > p4102[1] or timer p4103[0] has expired
For alarm A35211 the following applies:
- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[0] - hysteresis).
For fault F35207 the following applies:
- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[1] - hysteresis) and the fault has been acknowledged.
- the hysteresis value is 5 K and cannot be changed by the user.

Index: [0] = Alarm threshold
[1] = Fault threshold

Dependency: Refer to: r4104

Notice: Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.
For p4102[0...1] = 251 °C, evaluation of the corresponding threshold is deactivated.
For sensor type "PTC thermistor" (p4100 = 1), the following applies:
To activate the alarm or fault, p4102[0...1] must be set ≤ 250 °C.

p4103	Spindle supplementary temperature delay time / Suppl_temp t_delay		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	600.000 [s]	0.000 [s]

Description: Sets the delay time for the output of the fault for the temperature evaluation of the spindle.
The timer is started when the alarm threshold (p4102[0]) is exceeded.
If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07018 is output.
The fault can be acknowledged, if, after the delay time has expired, the alarm threshold is again fallen below.
If the fault threshold (p4102[1]) is exceeded before the delay time has expired, then fault F07018 is immediately output.

Dependency: Refer to: p4100, r4104, r4105

Note: With p4103 = 0 s, the timer is deactivated and only the fault threshold is effective.

p4103[0...3]	TM120 temperature evaluation delay time / TM120 temp t_delay

Dependency:	Refer to: p4102, r4104, r4105, p4118		

2 Parameters

2.2 List of parameters

Warning:

The fault F35207 ... F35210 and F35400 ... 35407 only results in the drive being shut down if at least one BICO interconnection exists between the drive and the TM150.

Note:

For p4103 = 0 s and sensor type "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6) the following applies:
 - the corresponding fault can only be initiated via the fault threshold (output of the timer is always a logical 0).
 For p4103 = 0 s and sensor type "PTC thermistor", "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:
 - the corresponding alarm and fault are simultaneously output (delay time = 0 s).

p4103

TM31 temperature evaluation delay time / TM31 temp t_delay

TM31

Can be changed: U, T	Calculated: -	Access level: 1
Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9576
P-Group: Motor	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
0.000 [ms]	600000.000 [ms]	0.000 [ms]

Description:

Sets the delay time for the output of the fault for the Terminal Module 31 (TM31).
 The timer is started when the alarm threshold (p4102[0]) is exceeded.
 If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F35207 is output.
 The fault can be acknowledged, if, after the delay time has expired, the alarm threshold is again fallen below.
 For sensor type "KTY84" "PT1000" (p4100 = 2, 6), the following applies:
 If the fault threshold (p4102[1]) is exceeded before the delay time has expired, then fault F35207 is immediately output.
 For sensor type "PTC thermistor" (p4100 = 1), the following applies:
 - Alarm and fault threshold simultaneously respond. The fault is only issued after the delay time has expired.

Dependency:

Refer to: r4104

Warning:

Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.

Note:

With p4103 = 0 ms, the timer is deactivated and only the fault threshold is effective.

Note:	The temperature sensors are connected to the following terminals: X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6) X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7) X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8) X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)		

X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)

X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)

For p4108[0...5] = 0, 2, 3 (1x2, 3, 4 wire evaluation):

The temperature channel belonging to the terminal block with the higher number is automatically deactivated (e.g. for X531 with 3-wire evaluation, channel 6 is deactivated).

p4109[0...11]		TM150 wire resistance measurement / TM150 R_wire meas		
TM150	Can be changed: T	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: -	Func. diagram: 9626, 9627

	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	1	0	
Description:	Setting to start the measurement of the wire resistance for a channel for the Terminal Module 150 (TM150). For a 2 wire evaluation, the total wire resistance is measured and saved. During the temperature evaluation, the temperature actual value is automatically calibrated using the measured wire resistance. Procedure: 1. Select the measuring method (1x2/2x2) for the corresponding terminal block (p4108[0...5] = 0, 1). 2. Set the required sensor type for the corresponding channel (p4100[x] = 1 ... 6, x = 0...5 or 0...11). 3. Jumper the sensor to be connected (short-circuit the sensor conductor close to the sensor). 4. Connect the sensor conductors to the appropriate terminals 1(+), 2(-) or 3(+), 4(-). 5. For the corresponding channel, start the measurement of the wire resistance (p4109[x] = 1). 6. After p4109[x] = 0, check the measured resistance value in p4110[x]. 7. Remove the jumper across the temperature sensor.			
Value:	0: Inactive 1: Start			
Index:	[0] = Temperature channel 0 [1] = Temperature channel 1 [2] = Temperature channel 2 [3] = Temperature channel 3 [4] = Temperature channel 4 [5] = Temperature channel 5 [6] = Temperature channel 6 [7] = Temperature channel 7 [8] = Temperature channel 8 [9] = Temperature channel 9 [10] = Temperature channel 10 [11] = Temperature channel 11			
Dependency:	Refer to: p4100, p4108, p4110			
Notice:	Wire resistance measurement is only possible for 1x2 or 2x2 wire evaluation (p4108[0...5] = 0, 1).			
Note:	The wire resistance value can be also directly entered into p4110[0...11]. The automatic conductor calibration for 1x2 and 2x2 wire evaluation is always performed with the value in p4110[0...11].

 [10] = Temperature channel 10
 [11] = Temperature channel 11

Dependency: Refer to: p4109

Notice: Wire resistance measurement is only possible for 1x2 or 2x2 wire evaluation (p4108[0...5] = 0, 1).

Note: Automatic conductor calibration is deactivated using p4110[0...11] = 0.

p4111[0...2] **TM150 group channel assignment / TM150 grp channel**

TM150	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9625
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 bin

Description: Assigns the temperature channels to groups for the Terminal Module 150 (TM150)
 For each group, the following calculated values are provided from the temperature actual values (r4105[0...11]):
 - Maximum value (r4112[0...2])
 - Minimum value (r4113[0...2])
 - average value (r4114[0...2])

Index:
 [0] = Group 0
 [1] = Group 1
 [2] = Group 2

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Temperature channel 0	Yes	No	-
	01	Temperature channel 1	Yes	No	-
	02	Temperature channel 2	Yes	No	-
	03	Temperature channel 3	Yes	No	-
	04	Temperature channel 4	Yes	No	-
	05	Temperature channel 5	Yes	No	-
	06	Temperature channel 6	Yes	No	-
	07	Temperature channel 7	Yes	No	-
	08	Temperature channel 8	Yes	No	-
	09	Temperature channel 9	Yes	No	-
	10	Temperature channel 10	Yes	No	-
	11	Temperature channel 11	Yes	No	-

Dependency: Refer to: r4105, r4112, r4113, r4114

Notice: When forming groups, it must be ensured that in one particular group, only temperature channels with the following sensor types are included:
 - "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6), real temperature actual value
 or alternatively
 - "PTC thermistor", "bimetallic NC contact" (p4100[0...11] = 1, 4), fictitious temperature actual value (-50 °C, 250 °C)
 If these sensor types are combined within one group, then the calculated values for maximum, minimum and average value will be falsified.

Note: Active and inactive temperature channels can be included in one group. However, when calculating the values (r4112, r4113, r4114) only the active temperature channels with valid actual value are taken into account (r4105[0...11] not equal to -300 °C).

2 Parameters

2.2 List of parameters

Index:	[0] = Group 0 [1] = Group 1 [2] = Group 2
Dependency:	Refer to: r4105, p4111, r4112, r4113
Note:	If one group is assigned sensor type "PTC" or "bimetal NC contact", then the average value -300 °C is output.

p4117[0...2] TM150 group sensor error effect / TM150 error effect

TM150	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9625
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: Sets the effect for an error of a sensor of a group for Terminal Module TM150 (TM150).
For p4117 = 0, the following applies:
The defective temperature sensor assigned to a group is not take into account when forming the group.
For p4117 = 1, the following applies:
For a sensor error, for the maximum value, minimum value and average value of the corresponding group, a value of -300 °C is output.

Value: 0: Skip sensor
1: Output value = -300 °C

Index: [0] = Group 0
[1] = Group 1
[2] = Group 2

Dependency: Refer to: r4105, p4111, r4112, r4113, r4114

p4118[0...11] TM150 fault threshold/alarm threshold hysteresis / TM150 thresh hyst

TM150	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9626, 9627

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [K]	50 [K]	5 [K]

Description: Sets the hysteresis for the fault threshold/alarm threshold (p4102[0...23]) for the Terminal Module 150 (TM150).

Index: [0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3
[4] = Temperature channel 4
[5] = Temperature channel 5
[6] = Temperature channel 6
[7] = Temperature channel 7
[8] = Temperature channel 8
[9] = Temperature channel 9
[10] = Temperature channel 10
[11] = Temperature channel 11

Dependency: Refer to: p4102, p4103, r4104, r4105

Note: The following applies for a corresponding alarm:
- Remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x] - hysteresis (p4118[x]).
The following applies for a corresponding fault:
- Remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x+1]) - hysteresis (p4118[x]) and the fault has been acknowledged.

p4119[0...11]	TM150 activate/deactivate smoothing / TM150 smooth act		
TM150	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9626, 9627
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to activate/deactivate the filter to smooth the temperature signal for the Terminal Module 150 (TM150). The smoothing is realized with a 1st order filter. The effective smoothing time constant depends on the number of channels that are simultaneously active and is displayed in r4120.		
Value:	0: Filter deactivated 1: Filter activated		
Index:	[0] = Temperature channel 0 [1] = Temperature channel 1 [2] = Temperature channel 2 [3] = Temperature channel 3 [4] = Temperature channel 4 [5] = Temperature channel 5 [6] = Temperature channel 6 [7] = Temperature channel 7 [8] = Temperature channel 8 [9] = Temperature channel 9 [10] = Temperature channel 10 [11] = Temperature channel 11

	-	-	-

Description: Displays the edge mode for digital input 0 ... 7 of Terminal Module 17 (TM17).

Assignment of the digital inputs to the bits:

DI 0: r4211.1 ... 0

DI 1: r4211.3 ... 2

DI 2: r4211.5 ... 4

DI 3: r4211.7 ... 6

DI 4: r4211.9 ... 8

DI 5: r4211.11 ... 10

DI 6: r4211.13 ... 12

DI 7: r4211.15 ... 14

Possible edge modes:

Bit x, y = 0, 0 --> no edge detection

Bit x, y = 0, 1 --> rising - rising edge

Bit x, y = 1, 0 --> falling - falling edge

Bit x, y = 1, 1 --> rising - falling edge or falling - rising edge

Note: DI: Digital Input

Description: Displays the edge mode for digital input 8 ... 15 of Terminal Module 15 (TM15).

Assignment of the digital inputs to the bits:

DI 8: r4212.1 ... 0

DI 9: r4212.3 ... 2

DI 10: r4212.5 ... 4

DI 11: r4212.7 ... 6

DI 12: r4212.9 ... 8

DI 13: r4212.11 ... 10

DI 14: r4212.13 ... 12

DI 15: r4212.15 ... 14

Possible edge modes:

Bit x, y = 0, 0 --> no edge detection

Bit x, y = 0, 1 --> rising - rising edge

Bit x, y = 1, 0 --> falling - falling edge

Bit x, y = 1, 1 --> rising - falling edge or falling - rising edge

Note: DI: Digital Input

Description: Displays the edge status for digital input 16 ... 23 of Terminal Module 15 (TM15).

Assignment of the digital inputs to the bits:

DI 16: r4313.1 ... 0

DI 17: r4313.3 ... 2

DI 18: r4313.5 ... 4

DI 19: r4313.7 ... 6

DI 20: r4313.9 ... 8

DI 21: r4313.11 ... 10

DI 22: r4313.13 ... 12

DI 23: r4313.15 ... 14

Possible edge states:

Bit x, y = 0, 0 --> no edge detection

Bit x, y = 0, 1 --> 1st edge detected

Bit x, y = 1, 0 --> 2nd edge detected

Bit x, y = 1, 1 --> both edges detected

Note: DI: Digital Input

Description:	Sets the mode for the incremental encoder emulation.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Zero mark enable	Yes	No	9674
	01	Zero marks synchronized with zero position of absolute encoders	Yes	No	9674
	04	Activate higher actual value resolution	Yes	No	-

2 Parameters

2.2 List of parameters

05	Activate higher setpoint resolution	Yes	No	-
06	Deactivate residual value handling in the setpoint channel	Yes	No	-
07	Activate output frequencies greater than 750 kHz	Yes	No	-

Note:

For bit 00, 01:

This bit is used to configure the zero mark via X520.

When the TM41 is operated in the SINAMICS mode (p4400 = 1), the following applies:

A new zero mark search is initiated by switching in the zero mark at the TM41 (p4401.0 = 1). The zero mark is output at the TM41 as soon as it was synchronized with the zero position/zero mark of the leading encoder.

For p4401.1 = 1, the following applies:

The zero pulse is only output via X520 when the absolute encoder passes the zero position of the absolute position (modulo converted).

For p4401.1 = 0, the following applies:

The zero pulse is output via X520 compatible with previous firmware versions (< V4.3). The zero pulse is output when the TM41 (modulo converted) passes the position it was in when the 24 V supply was switched on.

For bit 07:

For hardware versions A and B, this bit has no significance (output frequency = 512 kHz).

For p4401.7 = 0, the following applies:

The maximum output frequency is 750 kHz (from hardware version C).

For p4401.7 = 1, the following applies:

The maximum output frequency is 1024 kHz (from hardware version C).

p4404		TM41 encoder emulation controller options / Enc_emul ctrl_opt																	
TM41	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0001 bin																
Description:	Sets the controller option for incremental encoder emulation on Terminal Module 41 (TM41). p4404.0 = 1: Control with minimum following error (pre-control active) for synchronous position and synchronous zero-mark emulation p4404.1 = 1: In the case of TTL encoders, the control response improves at slow velocities. p4404.0 = p4404.1 = 0 Control with fixed following error.																		
Bit field:	<table border="1"> <thead> <tr> <th>Bit</th> <th>Signal name</th> <th>1 signal</th> <th>0 signal</th> <th>FP</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>Pre-control</td> <td>Active</td> <td>Inactive</td> <td>-</td> </tr> <tr> <td>01</td> <td>Pre-control with adaptation for TTL encoder</td> <td>Active</td> <td>Inactive</td> <td>-</td> </tr> </tbody> </table>	Bit	Signal name	1 signal	0 signal	FP	00	Pre-control	Active	Inactive	-	01	Pre-control with adaptation for TTL encoder	Active	Inactive	-			
Bit	Signal name	1 signal	0 signal	FP															
00	Pre-control	Active	Inactive	-															
01	Pre-control with adaptation for TTL encoder	Active	Inactive	-															
Note:	The parameter is only effective in the "SINAMICS" operating mode (p4400 = 1).																		
p4408		TM41 encoder emulation pulse number leading encoder / TM41 enc puls no.																	
TM41	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16384	Access level: 3 Func. diagram: 9674, 9676 Unit selection: - Expert list: 1 Factory setting 0																
Description:	Parameters p4408 and p4418 define the position setpoint format for the TM41 (CI: p4420). The two parameters p4408 and p4418 of the TM41 must be set the same as parameters p0408 and p0418 of the encoder interconnected at connector input p4420. The zero mark is only correctly output if this condition is maintained. For p4408 = 0, the following applies: Parameters p0408 and p0418 in addition assume the function of p4408 and p4418.																		
p4418		TM41 encoder emulation fine resolution leading encoder / TM41 fine res																	
TM41	Can be changed: C2(4) Data type: Unsigned8 P-Group: Encoder Not for motor type: - Min 2	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 18	Access level: 3 Func. diagram: 9676 Unit selection: - Expert list: 1 Factory setting 11																
Description:	Parameters p4408 and p4418 define the position setpoint format for the TM41 (CI: p4420). The two parameters p4408 and p4418 of the TM41 must be set the same as parameters p0408 and p0418 of the encoder interconnected at connector input p4420. The zero mark is only correctly output if this condition is maintained. For p4408 = 0, the following applies: Parameters p0408 and p0418 in addition assume the function of p4408 and p4418.																		

r4419	TM41 encoder emulation diagnostics position setpoint / TM41 Diag s_set		
TM41	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: 9676
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the position setpoint after taking into account the step up / step down. The format of this parameter is defined by p0408 / p0418.		
p4420	CI: TM41 encoder emulation position setpoint / Enc_emul s_setp		
TM41	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Integer32	Dyn. index: -	Func. diagram: 9676
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the incremental encoder emulation position setpoint.		
Recommendation:	The position actual value of the leading encoder in the current controller clock cycle is available in r0479. This is the reason that the following BICO interconnection should be preferably set: CI: p4420 (TM41) = r0479 (e.g. SERVO)		
Dependency:	Refer to: p4400, r4403		
Notice:	General conditions for incremental encoder emulation can be found in the following literature: SINAMICS S120 Function Manual Drive Functions		
Note:	The parameter is not effective in the SIMOTION operating mode (p4400 = 0). An encoder actual value (r0479) can only be interconnected once on a TM41. For p4401.0 = 1(enable zero mark), the following applies: In this case, p4420 must be interconnected with r0479 of the leading encoder. After successful internal, automatic synchronization, the zero mark of the incremental encoder emulation is output in synchronism to the zero position/zero mark of the leading encoder. The zero position of the leading encoder depends on the encoder type and the selected referencing technique (p0493, p0494, p0495).		
p4421	TM41 encoder emulation deadtime compensation / Enc_emul t_dead		
TM41	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9676
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.00	10.00	0.00
Description:	Sets the deadtime compensation for incremental encoder emulation. This factor defines the multiplier in which the encoder position setpoint of the incremental encoder emulation is shifted depending on the velocity.		
Dependency:	For p4421 = 0, the deadtime compensation for the position setpoint is switched out. For p4421 <> 0, the deadtime compensation is taken into account as follows: Setpoint new = setpoint via CI: p4420 + delta s * p4421 delta s: Position change per sampling time (p4099[3]), internally smoothed Refer to: p4400		
Note:	The parameter is not effective in the SIMOTION operating mode (p4400 = 0).		

p4422	TM41 encoder emulation position setpoint inversion / Enc_emul s_set inv		
TM41	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9676
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to invert the position setpoint for Terminal Module 41 (TM41). 0 -> Position setpoint (CI: p4420) is evaluated as normal. 1 -> Position setpoint (CI: p4420) is processed inverted.		
Dependency:	Refer to: p4420		
p4423	TM41 encoder emulation standstill adaptation / Enc_standst_adapt		
TM41	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9676
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2000	4
Description:	Sets standstill adaptation on Terminal Module 41 (TM41). p4423 is used to specify the number of clock cycles (one clock cycle = p4099[3]) used for encoder standstill detection. Once this time has elapsed, any potential deviation is compensated when adaptation is active. Parameter value = 0: adaptation inactive Parameter value > 0: adaptation active		
Dependency:	Refer to: r4403, p4404, p4420		
Danger:	The option p4404.1 = 1 is only effective if TM41 DAC is being used. If the possibility of a TM41 DAC (new) being replaced by a TM41 SAC (old) cannot be excluded, this option should not be set. TM41 SAC: Article No. = 6SL3055-0AA00-3PA0 TM41 DAC: Article No. = 6SL3055-0AA00-3PA1		
			
Note:	The parameter is only effective in the SINAMICS operating mode (p4400 = 1). The parameter value must be assigned a value of 4 or more to ensure that the system functions properly. This parameter is only relevant in the following cases: - TTL encoder is available - the controller option "Pre-control with adaptation for TTL encoder" has been activated (p4404.1 = 1)		
p4426	TM41 encoder emulation pulses for zero mark / Enc_emul pulses ZM		
TM41	Can be changed: C2(4), U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9674, 9676
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	16384	0
Description:	Sets pulse number to output the zero mark for the incremental encoder simulation/emulation. Example: p0408 = 2048 (encoder pulses) p4426 = 512 (pulses for the zero mark) --> Position direction: The zero mark is output after 512 pulses. --> Negative direction: The zero mark is output after 1536 pulses.		
Dependency:	Refer to: p0408		
Note:	The pulses for the zero mark (p4426) must be less than the encoder pulse number (p0408).		

r4427	TM41 encoder emulation zero mark position / TM41 NM_position		
TM41	Can be changed: -	Calculated: -	Access level: 4
	Data type: Integer32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the position of the next zero mark in a positive traversing direction.
The format of this parameter is defined by p0408 / p0418 (the same as the position actual value Xact1).

p4600[0...n]	Motor temperature sensor 1 sensor type / Temp_sens 1 type		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(3), U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: 8016
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	60	0

Description: Sets the sensor type of the first temperature sensor for the motor temperature monitoring.

Value:

- 0: No sensor
- 10: PTC fault
- 11: PTC alarm
- 12: PTC alarm & timer
- 20: KTY84
- 30: Bimetallic NC contact fault
- 31: Bimetallic NC contact alarm
- 32: Bimetallic NC contact alarm & timer
- 60: PT1000

Dependency: Refer to: r0458, p0600, p0601

Note: This parameter is effective only when p0601 = 10.
PTC thermistor: Tripping resistance = 1650 Ohm
Information on using temperature sensors is provided in the following literature:
- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual

p4601[0...n]	Motor temperature sensor 2 sensor type / Temp_sens 2 type		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(3), U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: 8016
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	60	0

Description: Sets the sensor type of the second temperature sensor for the motor temperature monitoring.

Value:

- 0: No sensor
- 10: PTC fault
- 11: PTC alarm
- 12: PTC alarm & timer
- 20: KTY84
- 30: Bimetallic NC contact fault
- 31: Bimetallic NC contact alarm
- 32: Bimetallic NC contact alarm & timer
- 60: PT1000

Dependency: Refer to: r0458, p0600, p0601

Note: This parameter is effective only when p0601 = 10.
 Terminals for KTY84/PT1000: X200.1, X200.2
 PTC thermistor: Tripping resistance = 1650 Ohm
 Information on using temperature sensors is provided in the following literature:

	Min	Max	Factory setting
	0	32	10
Description:	Sets the sensor type of the fourth temperature sensor for the motor temperature monitoring.		
Value:	0: No sensor 10: PTC fault 11: PTC alarm 12: PTC alarm & timer 20: KTY84, PT100, PT1000 30: Bimetallic NC contact fault 31: Bimetallic NC contact alarm 32: Bimetallic NC contact alarm & timer		
Dependency:	Refer to: r0458, p0600, p0601		
Note:	This parameter is effective only when p0601 = 11. PTC thermistor: Tripping resistance = 1650 Ohm Information on using temperature sensors is provided in the following literature: - hardware description of the appropriate components - SINAMICS S120 Commissioning Manual		

r4620[0...3]	Motor temperature measured / Mot_temp meas		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: - Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: 8016 Unit selection: p0505 Expert list: 1 Factory setting - [°C]
Description:	Displays the actual temperature in the motor measured through temperature channels 1 ... 4.		
Index:	[0] = Temperature channel 1 [1] = Temperature channel 2 [2] = Temperature channel 3 [3] = Temperature channel 4		
Note:	For a value not equal to -200.0 °C, the following applies: - this temperature display is valid. - a KTY/PT1000 temperature sensor is connected. For a value equal to -200.0 °C, the following applies: - this temperature display is not valid (temperature sensor error). - a PTC sensor or bimetallic NC contact is connected. - the temperature sensor evaluation is deactivated (p0600 = 0 or p0601 = 0). - the sensor channel is deactivated (p460x = 0 or p461x = 0).		
r4640[0...95]	Encoder diagnostics state machine / Enc diag stat_ma		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the encoder diagnostics for the PROFIdrive interface.		
p4641[0...2]	OEM encoder diagnostic signal selection / OEM enc diag sel		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the trace functionality for OEM encoder manufacturers.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
p4642	Test function encoder fault / Test encoder fault		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: Unsigned8 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 255	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Test function to initiate an encoder fault For a 0/1 transition, an encoder fault is output at the currently used motor encoder. For a 1/0 transition and an alarm acknowledgment, the encoder fault that was issued is cleared.		
Notice:	It is not permissible that a data set is switched over between issuing and deleting an encoder fault.		

p4650	Encoder functional reserve component number / Enc fct_res num		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned16 P-Group: Displays, signals Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 399	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the component number (p0141) of the encoder whose functional reserve is to be displayed (r4651).		
Dependency:	Refer to: r4651		

r4651[0...3]	Encoder functional reserve / Enc fct_reserve		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the functional reserve of the encoder selected via p4650. 0 ... 25 %: The function limit has been reached. A service is recommended. 26 ... 100 %: The encoder is working in the specified range.		
Index:	[0] = Function reserve 1 [1] = Function reserve 2 [2] = Function reserve 3 [3] = Function reserve 4		
Dependency:	Refer to: p4650		
Note:	Value = 999 means: - the component specified in p4650 is not connected - the encoder does not support the display of the functional reserve		

p4652[0...2]	XIST1_ERW reset mode / XIST1_ERW res mode		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C1(3) Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 3 Func. diagram: 4750 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the mode to reset the actual value in XIST_ERW (CO: r4653).		
Value:	0: Inactive 1: Reset with zero mark 2: Reset with BICO 3: Reset with selected zero mark		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: r4653, r4654, p4655		
Note:	The absolute value is only valid after passing the zero mark. If value = 1: The value in XIST1_ERW is reset when passing every zero mark. If value = 2: The value in XIST1_ERW is reset with a 0/1 edge via binector input p4655.		

2 Parameters

2.2 List of parameters

If value = 3:

The value in XIST1_ERW is reset after a 0/1 edge via binector input p4655 when passing the next zero mark.

p4652	XIST1_ERW reset mode / XIST1_ERW res mode		
ENC	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 4750
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	0
Description:	Sets the mode to reset the actual value in XIST_ERW (CO: r4653).		
Value:	0: Inactive 1: Reset with zero mark 2: Reset with BICO 3: Reset with selected zero mark		
Dependency:	Refer to: r4653, r4654, p4655		
Note:	The absolute value is only valid after passing the zero mark. If value = 1: The value in XIST1_ERW is reset when passing every zero mark. If value = 2: The value in XIST1_ERW is reset with a 0/1 edge via binector input p4655. If value = 3: The value in XIST1_ERW is reset after a 0/1 edge via binector input p4655 when passing the next zero mark.

	Min	Max	Factory setting
	0.00 [kHz]	20000.00 [kHz]	0.00 [kHz]
Description:	Sets the filter bandwidth for Sensor Module SMx10 (resolver) and SMx20 (sin/cos). The value set on the Sensor Module is displayed in r4661. Currently, the Sensor Module hardware only supports the following values: - 0: The Sensor Module's default setting is used. - 50 kHz - 170 kHz - 500 kHz - Unlimited: Only the bandwidth of the operational amplifier is effective.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: r4661		
Note:	A value of zero is displayed if an encoder is not present.		

p4660	Sensor Module filter bandwidth / SM Filt_bandw		
ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [kHz]	20000.00 [kHz]	0.00 [kHz]
Description:	Sets the filter bandwidth for Sensor Module SMx10 (resolver) and SMx20 (sin/cos). The value set on the Sensor Module is displayed in r4661. Currently, the Sensor Module hardware only supports the following values: - 0: The Sensor Module's default setting is used. - 50 kHz - 170 kHz - 500 kHz - Unlimited: Only the bandwidth of the operational amplifier is effective.		
Dependency:	Refer to: r4661		
Note:	A value of zero is displayed if an encoder is not present.		

r4661[0...2]	Sensor Module filter bandwidth display / SM Filt_bandw disp		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min - [kHz]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [kHz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [kHz]
Description:	Display of the effective filter bandwidth for Sensor Module SMx10 (resolver) and SMx20 (sin/cos). The bandwidth of the filter is set using p4660.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p4660		
Note:	A value of zero is displayed if an encoder is not present.		
r4661	Sensor Module filter bandwidth display / SM Filt_bandw disp		
ENC	Can be changed: - Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min - [kHz]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [kHz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [kHz]
Description:	Display of the effective filter bandwidth for Sensor Module SMx10 (resolver) and SMx20 (sin/cos). The bandwidth of the filter is set using p4660.		
Dependency:	Refer to: p4660		
Note:	A value of zero is displayed if an encoder is not present.		
p4662[0...n]	Encoder characteristic type / Enc char_type		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Integer16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 1	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the characteristic type. For non-linear sensors, the interrelationship between the signal voltage and the position can be defined using a third degree polynomial.		
Value:	0: Characteristic inactive 1: Characteristic polynomial third degree		
Dependency:	Refer to: p4663, p4664, p4665, p4666		
Note:	If value = 1: A third degree polynomial is defined as follows: $F(x) = K3 * x^3 + K2 * x^2 + K1 * x + K0$ Coefficients K0 ... K3 should be defined and entered into p4663 ... p4666. The sensor range is emulated to $x = -0.5 \dots +0.5$.		

2 Parameters

p4663[0...n]	Encoder characteristic K0 / Enc char K0			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Setting for coefficient K0 to calculate the characteristic (p4662).			
Dependency:	Refer to: p4662, p4664, p4665, p4666			
p4664[0...n]	Encoder characteristic K1 / Enc char K1			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Setting for coefficient K1 to calculate the characteristic (p4662).			
Dependency:	Refer to: p4662, p4663, p4665, p4666			
p4665[0...n]	Encoder characteristic K2 / Enc char K2			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Setting for coefficient K2 to calculate the characteristic (p4662).			
Dependency:	Refer to: p4662, p4663, p4664, p4666			
p4666[0...n]	Encoder characteristic K3 / Enc char K3			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Setting for coefficient K3 to calculate the characteristic (p4662).			
Dependency:	Refer to: p4662, p4663, p4664, p4665			
p4670[0...n]	Analog sensor configuration / Ana_sens config			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: U, T Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 0000 0000 0000 0000 0000 0000 0000 bin	
Description:	Sets the configuration for evaluation on the analog sensor.			
Bit field:	Bit	Signal name	1 signal	0 signal
	06	Set velocity to 0	Yes	No
	08	Pos val range	0.0 / 1.0 pulse	-0.5 / +0.5 pulse
				FP - -

09	Fault/alarm messages	Alarm	Fault	-
10	Channel B act	Yes	No	-
11	Channel A act	Yes	No	-
13	Commutation angle constant	Yes	No	-
14	Suppress faults	Yes	No	-
31	Extrapolation	ON	OFF	-

Notice:

For bit 06:
Setting the bit sets the velocity actual value (r0061) permanently to 0.
For bit 13:
Setting the bit sets the commutation angle permanently to the commutation angle offset (p0431).

Note:

For bit 09:
A setting of bit = 0 will trigger a fault for the relevant channel if the actual value is invalid.
A setting of bit = 1 will trigger an alarm for the relevant channel if the actual value is invalid.
Zu Bit 10, 11:
If both channels are activated, the actual value is generated from the mean value of both channels. If a channel fails (actual value invalid), it is not included when the mean value is generated.
For bit 14:
The bit is only evaluated for encoder 1. Otherwise no effect.

0.0000 [V]

Description:

Sets the voltage when the connected sensor is at actual value zero.
At this voltage channel A supplies an actual value of zero.

2 Parameters

2.2 List of parameters

p4673[0...n]	Analog sensor channel A voltage per encoder period / Ana_sens A U/per
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -10.0000 [V]
	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 10.0000 [V]
	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 6.0000 [V]
Description:	Sets the output voltage range to be mapped for the connected analog sensor. The voltage range is determined by the following parameters: - p4672 (voltage at actual value 0) - p4673 (voltage per encoder period)
Note:	The minimum actual value which can be mapped is equal to p4672 - p4673/2. The maximum actual value which can be mapped is equal to p4672 + p4673/2.

p4674[0...n]	Analog sensor channel B voltage at actual value zero / Ana_sens B U at 0
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -10.0000 [V]
	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 10.0000 [V]
	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0000 [V]
Description:	Sets the voltage when the connected sensor is at actual value zero. At this voltage channel B supplies an actual value of zero.

p4675[0...n]	Analog sensor channel B voltage per encoder period / Ana_sens B U/per
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -10.0000 [V]
	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 10.0000 [V]
	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 6.0000 [V]
Description:	Sets the output voltage range to be mapped for the connected analog sensor. The voltage range is determined by the following parameters: - p4674 (voltage at actual value 0) - p4675 (voltage per encoder period)
Note:	The minimum actual value which can be mapped is equal to p4674 - p4675/2. The maximum actual value which can be mapped is equal to p4674 + p4675/2.

p4676[0...n]	Analog sensor range limit threshold / Ana_sens lim thr
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0.0 [%]
	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 100.0 [%]
	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the threshold for limit monitoring of the absolute actual value on the analog sensor. If this threshold is overshoot by the actual value of a channel, a corresponding fault/alarm (p4670.9) is output.
Dependency:	Refer to: p4673, p4675

p4677[0...n]	Analog sensor LVDT configuration / Ana_sens LVDT conf				
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 4

	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-360.00 [°]	360.00 [°]	0.00 [°]		
Description:	Sets the phase for the LVDT sensor.				
p4680[0...n]	Zero mark monitoring tolerance permissible / ZM_monit tol perm				
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0	1000	4		
Description:	Sets the permissible tolerance in encoder pulses for the zero mark distance in the context of zero mark monitoring. Causes fault F3x100 to appear less frequently.				
Dependency:	Refer to: F31100				

2 Parameters

2.2 List of parameters

p4681[0...n]	Zero mark monitoring tolerance window limit 1 positive / ZM tol lim 1 pos		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting
	Min 0	Max 1000	Factory setting 2
Description:	Sets the positive tolerance window in encoder pulses for limit 1 for the zero mark monitoring. If the deviation is less than this limit, then the pulse number is not corrected. If it is higher than this limit, fault F3x131 is triggered. If fault F3x131 is re-parameterized to alarm (A) or no message (N), the encoder pulses which have not been corrected are added to the accumulator (p4688). The accumulator can be deactivated using p0437.7.		
Dependency:	Refer to: p0437, p4688 Refer to: F31131		
Note:	This monitoring is activated by setting p0437.2 = 1 (position actual value correction). The positive limit describes additional pulses due to EMC.		
p4682[0...n]	Zero mark monitoring tolerance window limit 1 negative / ZM tol lim 1 neg		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Integer32 P-Group: Encoder Not for motor type: -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting
	Min -1001	Max 0	Factory setting -1001
Description:	Sets the negative tolerance window in encoder pulses for limit 1 for the zero mark monitoring. If the deviation is less than this limit, the PPR is not corrected. If it is higher than this limit, fault F3x131 is triggered. If fault F3x131 is re-parameterized to alarm (A) or no message (N), the encoder pulses which have not been corrected are added to the accumulator (p4688). The accumulator can be deactivated using p0437.7.		
Dependency:	Refer to: p0437, p4681, p4688 Refer to: F31131		
Note:	This monitoring is activated by setting p0437.2 = 1 (position actual value correction). For a set value = -1001, the negated value of p4681 is effective. The negative limit describes the pulses lost due to a covered glass panel in the incremental encoder.		
p4683[0...n]	Zero mark monitoring tolerance window alarm threshold positive / ZM tol A_thr pos		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting
	Min 0	Max 100000	Factory setting 0
Description:	Sets the positive tolerance window in encoder pulses for limit 2 for the zero mark monitoring. Accumulator (p4688) is compared with this parameter, and where relevant, alarm A3x422 is output for 5 seconds.		
Dependency:	Refer to: p0437, p4681, p4682, p4688 Refer to: F31131, A31422		
Note:	Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction).		

p4684[0...n]	Zero mark monitoring tolerance window alarm threshold negative / ZM tol A_thr neg		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Integer32 P-Group: Encoder Not for motor type: - Min -100001	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 0	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -100001
Description:	Sets the negative tolerance window in encoder pulses for limit 2 for the zero mark monitoring. Accumulator (p4688) is compared with this parameter, and where relevant, alarm A3x422 is output for 5 seconds.		
Dependency:	Refer to: p0437, p4683, p4688 Refer to: F31131, A31422		
Note:	Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction). For a set value = -100001, the negated value of p4683 is effective.		
p4685[0...n]	Speed actual value mean value generation / n_act mean val		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 20	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the number of current controller clock cycles for mean value generation of the speed actual value.		
Note:	Value = 0, 1: No mean value generation. Higher values also mean higher dead times for the speed actual value.		
p4686[0...n]	Zero mark minimum length / ZM min length		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 10	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the minimum length for the zero mark in 1/4 encoder pulses.		
Dependency:	Refer to: p0425, p0437		
Note:	The minimum length of the zero mark must be less than the zero mark distance (p4686 < p0425). The parameter is activated using p0437.1 = 1 (zero mark edge detection).		
p4688[0...2]	CO: Zero mark monitoring differential pulse count / ZM diff_pulse qty		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: Integer32 P-Group: - Not for motor type: - Min -2147483648	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147483647	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Display and connector output for the identified incorrect pulses in lines. Also see p0437.7 (do not accumulate number of incorrect pulses).		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p0437, p4681, p4682, p4683, p4684		
Note:	The display can only be reset to zero.		

p4688	CO: Zero mark monitoring differential pulse count / ZM diff_pulse qty		
ENC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-2147483648	2147483647	0
Description:	Display and connector output for the identified incorrect pulses in lines. Also see p0437.7 (do not accumulate number of incorrect pulses).		
Dependency:	Refer to: p0437, p4681, p4682, p4683, p4684		
Note:	The display can only be reset to zero.		
r4689[0...2]	CO: Squarewave encoder diagnostics / Sq-wave enc diag		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the encoder status according to PROFIdrive for a squarewave encoder.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: A31422		
Note:	After alarm A3x422 is output, this parameter is set for 100 ms.		
r4689	CO: Squarewave encoder diagnostics / Sq-wave enc diag		
ENC	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the encoder status according to PROFIdrive for a squarewave encoder.		
Dependency:	Refer to: A31422		
Note:	After alarm A3x422 is output, this parameter is set for 100 ms.		
p4690	SMI spare part component number / SMI comp_no		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	399	0
Description:	Sets the component number for the SMI/DQI for which motor and/or encoder data should be saved, deleted or downloaded.		
Dependency:	Refer to: p4691, p4692, p4693		
Note:	DQI: DRIVE-CLiQ Sensor Integrated SMI: SINAMICS Sensor Module Integrated		

p4691		SMI spare part save/download data / Save/DL SMI data	
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: T Data type: Integer16 P-Group: Displays, signals Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 39	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting for the saving/downloading/deletion of motor and/or encoder data for the component specified in p4690 (SMI/DQI). A backup of this data can be saved to non-volatile memory. The backup procedure is performed automatically as part of the function for saving to non-volatile memory (p0977 = 1 or "Copy RAM to ROM"). If a part is replaced, the saved data can be reloaded. Procedure: p4690 = set component number p4691 = 1, 2, 30: Set the required procedure (save/download/delete). p4691 = 9, 10, 36: Feedback signal on successful completion of the procedure. p4691 = 11... 22, 37, 38: Error values if the procedure could not be executed successfully.		
Value:	0: Inactive 1: Save SMI data 2: Download SMI data 9: SMI data downloaded and POWER ON required for component 10: SMI data backup complete 11: SMI data backup for selected component not found 12: Selected component not available or not connected 13: Insufficient memory space for backup 14: Format of saved data is incompatible 15: Transfer fault during data download 16: Transfer fault during data backup 17: Data backup does not match parameterized encoder/motor 18: Data backup directory not permissible 19: Component already contains data 20: Component does not contain any data 21: Component is not an SMI or a DQI 22: SMI data cannot be downloaded for component 30: Delete SMI data 35: Confirmation of SMI data delete required 36: SMI data deleted and POWER ON required for component 37: Access level not sufficient for delete 38: Delete SMI data not permitted for component 39: SMI data for component cannot be deleted		
Dependency:	Refer to: p4690, p4692, p4693		
Notice:	Once SMI/DQI data has been deleted or downloaded successfully, the component has to be switched on (POWER ON).		
Note:	SMI: SINAMICS Sensor Module Integrated DQI: DRIVE-CLiQ Sensor Integrated Help for error value = 11: - Save the data for the original SMI on the memory card. - Use an SMI with a suitable hardware version. Help for error value = 12: - set the correct component number or connect the component. Help for error value = 13: - Use a memory card with more memory space. Help for error value = 14: - Create a data backup on the memory card corresponding to the SMI type. Help for error value = 15: - check the DRIVE-CLiQ wiring for the component.		

- Help for error value = 16:
 - check the DRIVE-CLiQ wiring for the component.
- Help for error value = 17:
 - Save the data for the original SMI on the memory card.
- Help for error value = 18:
 - set parameter p4693 to an appropriate value.
- Help for error value = 19:
 - Perform an SMI delete or use a blank SMI.
- Help for error value = 20:
 - Use an SMI that is not blank.
- Help for error value = 21:
 - set the correct component number (p4690).
- Note for error value = 22:
 - Data cannot be downloaded for component.
- Help for error value = 35:
 - Reset parameter p4691 to 30.
- Help for error value = 37:
 - set the access level to Expert or higher.
- Help for error value = 38:
 - insert the SMI/DQI into the actual topology as an additional component (component number >= 200).
 - set the component number from the actual topology (p4690 >= 200).
 - set the correct component number (p4690 >= 200).
- Note for error value = 39:
 - SMI already deleted or too old. Delete not possible.

p4692	SMI spare part save data of all SMIs / Save SMI data		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: T Data type: Integer16 P-Group: Displays, signals Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 29	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting to back up the data of all SMIs and DQIs featured in the target topology.		
Value:	0: Inactive 1: Save data of all SMIs and DQIs 10: Save all data successful 13: Insufficient memory space for backup 16: Transfer fault during data backup 20: Component does not contain any data 29: Not all components from target topology saved		
Note:	SMI: SINAMICS Sensor Module Integrated p4692 = 10: Automatic on successful completion of backup procedure. p4692 = 13, 16, 20, 29: Error values if the procedure could not be executed successfully. The procedure must be repeated if the data save operation was interrupted (e.g. if the power supply voltage failed). Help for error value = 13: - Use a memory card with more memory space. Help for error value = 16: - check the DRIVE-CLiQ wiring. Help for error value = 20: - Use an SMI that is not blank. Help for error value = 29: - check and correct the target and actual topologies for the SMIs. - Repeat the save procedure.		

p4693[0...1]		SMI spare part data backup directory / SMI dat_bkup dir		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: T Data type: Unsigned16 P-Group: Displays, signals Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 399	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0	
Description:	Sets the directory for downloading and saving data. Example: The SMI has the component number 5 and the SMI data (motor/encoder data) is to be stored in subdirectory C205. --> p4690 = 5, p4693[0] = 205, p4691 = 1 [0] = Subdirectory selection [1] = Reserved			
Index:				
Dependency:	Refer to: p4691, r4694			
Notice:	If p4693[0] is not equal to 0 and p4693[0] is not equal to p4690, the following applies: - Only a number >= 200 may be selected for the subdirectory when saving. - in the case of downloads, a selection for the subdirectory may only be made for an SMI/DQI with a component number >= 200 (preliminary component number) (p4690 >= 200).			
Note:	DQI: DRIVE-CLiQ Sensor Integrated SMI: SINAMICS Sensor Module Integrated For index 0: This index is used to select the subdirectory for saving and downloading data. The motor article number (MLFB) of the corresponding data backup is displayed in r4694. For p4693[0] = 0, the following applies: The directory is determined by the setting of p4690.			

r4694[0...19]		SMI spare part data backup motor article number / SMI dat_bkup MLFB		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned8 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Displays the motor article number (MLFB) of the data backup selected with p4693.			
Dependency:	Refer to: p4691, p4692			
Caution:	If the selected subdirectory contains a number of data sets, "More Datasets" is displayed in r4694[0...19]. If there is no SMI data (motor/encoder data) in the selected subdirectory or if the selected subdirectory does not exist, the following applies: - the number of the next subdirectory located is displayed. - this subdirectory is not checked for valid SMI data. - if another subdirectory cannot be located, nothing is displayed in r4694[0...19].			
Note:	SMI: SINAMICS Sensor Module Integrated			

2 Parameters

2.2 List of parameters

p4700[0...1]	Trace control / Trace control			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0	
Description:	Setting to control the trace function.			
Value:	0: Stop trace 1: Start trace			
Index:	[0] = Trace 0 [1] = Trace 1			
p4701	Measuring function control / Meas fct ctrl			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0	
Description:	Setting to control the measurement function.			
Value:	0: Stop measuring function 1: Start measuring function 2: Measuring function check parameterization 3: Start measuring function without enable signals			
p4703[0...1]	Trace options / Trace options			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: T Data type: Unsigned16 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin	
Description:	Sets the options for the trace.			
Index:	[0] = Trace 0 [1] = Trace 1			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Automatically start trace with time slices	Yes	No
FP				-
Dependency:	Refer to: p4700			
Note:	For bit 00: 0: The trace starts with p4700 as before. 1: When powering up, the trace starts immediately with the saved parameter settings with the start of the time slices.			

r4705[0...1]	Trace status / Trace status		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 6	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the actual status of the trace.		
Value:	0: Trace inactive 1: Trace is recording presamples 2: Trace is waiting for trigger event 3: Trace is recording 4: Recording (trace) ended 5: Trace inactive with permissible configuration data 6: Trace inactive with inadmissible configuration data		
Index:	[0] = Trace 0 [1] = Trace 1		
r4706	Measuring function status / Meas fct status		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the actual status of the measuring function.		
Value:	0: Measurement function inactive 1: Measuring function parameterization checked 2: Measuring function waits for stabilizing time 3: Measuring function recording (tracing) 4: Measuring function trace ended with error 5: Measuring function trace successfully completed		
p4707	Measurement function configuration / Meas fct config		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Setting to configure the measurement function.		
Value:	0: Standard 1: Free meas fct		
Dependency:	The parameter cannot be changed when the measurement function has been started (r4706 = 2, 3).		
Note:	This parameter involves the free measuring functions and is only active for p4810=6. For value = 0: The free measuring function is parameterized with master control. For value = 1: The free measuring function is parameterized without master control.		

2 Parameters

2.2 List of parameters

r4708[0...1]	Trace memory space required / Trace mem required		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the required memory in bytes for the actual parameterization.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Refer to: r4799		
r4709[0...1]	Trace memory space required for measuring functions / Trace mem required		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the required memory in bytes for the actual parameterization. This applies, if the trace for the measurement functions is used.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Refer to: r4799		
p4710[0...1]	Trace trigger condition / Trace Trig_cond		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 8	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 2
Description:	Sets the trigger condition for the trace.		
Value:	1: Immediate trace start 2: Positive edge 3: Negative edge 4: Entry to hysteresis band 5: Leaving hysteresis band 6: Trigger at bit mask 7: Start with function generator 8: Trigger at bit mask with edge		
Index:	[0] = Trace 0 [1] = Trace 1		

p4711[0...5]	Trace trigger signal / Trace trig_signal		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Selects the trigger signal for the trace.		
Index:	[0] = Trace 0 parameter in BICO format [1] = Trace 1 parameter in BICO format [2] = Trace 0 PINx with DO Id and chart Id [3] = Trace 0 PINx with block Id and PIN Id [4] = Trace 1 PINy with DO Id and chart Id [5] = Trace 1 PINy with block Id and PIN Id		
Dependency:	Only effective when p4710 does not equal 1.		
Note:	It only makes sense to trace the PINs using the commissioning software. For index 2(4) and 3(5) equal to zero, index 0(1) can only be written and vice versa. For index 0 ... 1: Here, the trigger signal for trace 0 or 1 is entered as parameter in the BICO format. For trace with a physical address (p4789), the data type of the trigger signal is set here. For index 2 ... 3: The triggering PIN for trace 0 is entered here. Index 2 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart Index 3 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN For index 4 ... 5: The triggering PIN for trace 1 is entered here. Index 4 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart Index 5 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN		
p4712[0...1]	Trace trigger threshold / Trace trig_thresh		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -340.28235E36	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 340.28235E36	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0.00
Description:	Sets the trigger threshold for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only effective when p4710 = 2, 3.		
p4713[0...1]	Trace tolerance band trigger threshold 1 / Trace trig_thr 1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -340.28235E36	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 340.28235E36	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0.00
Description:	Sets the first trigger threshold for trigger via tolerance band.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only effective when p4710 = 4, 5.		

2 Parameters

2.2 List of parameters

p4714[0...1]	Trace tolerance band trigger threshold 2 / Trace trig thr 2
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -340.28235E36 Max 340.28235E36
	Calculated: - Dyn. index: - Unit group: - Scaling: -
	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0.00
Description:	Sets the second trigger threshold for trigger via tolerance band
Index:	[0] = Trace 0 [1] = Trace 1
Dependency:	Only effective when p4710 = 4, 5.

p4715[0...1]	Trace bit mask trigger, bit mask / Trace trig mask
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0 Max 4294967295
	Calculated: - Dyn. index: - Unit group: - Scaling: -
	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the bit mask for the bit mask trigger.
Index:	[0] = Trace 0 [1] = Trace 1
Dependency:	Only effective when p4710 = 6 or p4710 = 8.

p4716[0...1]	Trace bit mask trigger trigger condition / Trace Trig_cond
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0 Max 4294967295
	Calculated: - Dyn. index: - Unit group: - Scaling: -
	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the trigger condition for bit mask trigger.
Index:	[0] = Trace 0 [1] = Trace 1
Dependency:	Only effective when p4710 = 6.

p4717	Measuring function number of averaging operations / Meas fct avg qty
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned8 P-Group: Trace and function generator Not for motor type: - Min 0 Max 255
	Calculated: - Dyn. index: - Unit group: - Scaling: -
	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the number of averaging operations for the measuring function.

p4718	Measuring function number of stabilizing periods / MeasFct StabPerQty		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned8 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 255	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the number of stabilizing periods for the measuring function.		
r4719[0...1]	Trace trigger index / Trace Trig_index		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trigger index in the trace buffer. The trigger event occurred at this point.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only valid when p4705 = 4.		
p4720[0...1]	Trace recording cycle / Trace record_cyc		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.000 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 60000.000 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 1.000 [ms]
Description:	Sets the recording cycle for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
p4721[0...1]	Trace recording time / Trace record_time		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.000 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 340.28235E36 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 1000.000 [ms]
Description:	Sets the recording time for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		

2 Parameters

2.2 List of parameters

p4722[0...1]	Trace trigger delay / Trace trig_delay		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -340.28235E36 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 340.28235E36 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0.000 [ms]

Description: Sets the trigger delay for the trace.
Trigger delay < 0:
Pretrigger: Tracing (recording) starts the selected time before the trigger event actually occurs.
Trigger delay > 0:
Post trigger: Tracing does not start until the set time after the trigger event.

Index: [0] = Trace 0
[1] = Trace 1

p4723[0...1]	Trace time slice cycle / Trace cycle		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.03125 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4.00000 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0.12500 [ms]

Description: Sets the time slice cycle in which the trace is called.

Index: [0] = Trace 0
[1] = Trace 1

p4724[0...1]	Trace average in the time range / Trace average		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned8 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 0001 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin

Description: Sets the averaging in the time range for the trace.

Index: [0] = Trace 0
[1] = Trace 1

r4725[0...1]	Trace data type 1 traced / Trace rec type 1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -

Description: Displays the recorded data type 1 for the trace.

Index: [0] = Trace 0
[1] = Trace 1

r4726[0...1]	Trace data type 2 traced / Trace rec type 2		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the recorded data type 2 for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
r4727[0...1]	Trace data type 3 traced / Trace rec type 3		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the recorded data type 3 for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
r4728[0...1]	Trace data type 4 traced / Trace rec type 4		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the recorded data type 4 for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
r4729[0...1]	Trace number of recorded values / Trace rec values		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the number of traced values for each signal.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only valid when p4705 = 4.		

2 Parameters

2.2 List of parameters

p4730[0...5]	Trace record signal 0 / Trace record sig 0		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Selects the first signal to be traced.		
Index:	[0] = Trace 0 parameter in BICO format [1] = Trace 1 parameter in BICO format [2] = Trace 0 PINx with DO Id and chart Id [3] = Trace 0 PINx with block Id and PIN Id [4] = Trace 1 PINy with DO Id and chart Id [5] = Trace 1 PINy with block Id and PIN Id		
<hr/>			
p4731[0...5]	Trace record signal 1 / Trace record sig 1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Selects the second signal to be traced.		
Index:	[0] = Trace 0 parameter in BICO format [1] = Trace 1 parameter in BICO format [2] = Trace 0 PINx with DO Id and chart Id [3] = Trace 0 PINx with block Id and PIN Id [4] = Trace 1 PINy with DO Id and chart Id [5] = Trace 1 PINy with block Id and PIN Id		
<hr/>			
p4732[0...5]	Trace record signal 2 / Trace record sig 2		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Selects the third signal to be traced.		
Index:	[0] = Trace 0 parameter in BICO format [1] = Trace 1 parameter in BICO format [2] = Trace 0 PINx with DO Id and chart Id [3] = Trace 0 PINx with block Id and PIN Id [4] = Trace 1 PINy with DO Id and chart Id [5] = Trace 1 PINy with block Id and PIN Id		

p4733[0...5]	Trace record signal 3 / Trace record sig 3		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Selects the fourth signal to be traced.		
Index:	[0] = Trace 0 parameter in BICO format [1] = Trace 1 parameter in BICO format [2] = Trace 0 PINx with DO Id and chart Id [3] = Trace 0 PINx with block Id and PIN Id [4] = Trace 1 PINy with DO Id and chart Id [5] = Trace 1 PINy with block Id and PIN Id		
p4734[0...5]	Trace record signal 4 / Trace record sig 4		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Selects the fifth signal to be traced.		
Index:	[0] = Trace 0 parameter in BICO format [1] = Trace 1 parameter in BICO format [2] = Trace 0 PINx with DO Id and chart Id [3] = Trace 0 PINx with block Id and PIN Id [4] = Trace 1 PINy with DO Id and chart Id [5] = Trace 1 PINy with block Id and PIN Id		
p4735[0...5]	Trace record signal 5 / Trace record sig 5		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Selects the sixth signal to be traced.		
Index:	[0] = Trace 0 parameter in BICO format [1] = Trace 1 parameter in BICO format [2] = Trace 0 PINx with DO Id and chart Id [3] = Trace 0 PINx with block Id and PIN Id [4] = Trace 1 PINy with DO Id and chart Id [5] = Trace 1 PINy with block Id and PIN Id		

p4736[0...5]	Trace record signal 6 / Trace record sig 6		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Selects the seventh signal to be traced.		
Index:	[0] = Trace 0 parameter in BICO format [1] = Trace 1 parameter in BICO format [2] = Trace 0 PINx with DO Id and chart Id [3] = Trace 0 PINx with block Id and PIN Id [4] = Trace 1 PINy with DO Id and chart Id [5] = Trace 1 PINy with block Id and PIN Id		
p4737[0...5]	Trace record signal 7 / Trace record sig 7		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Selects the eighth signal to be traced.		
Index:	[0] = Trace 0 parameter in BICO format [1] = Trace 1 parameter in BICO format [2] = Trace 0 PINx with DO Id and chart Id [3] = Trace 0 PINx with block Id and PIN Id [4] = Trace 1 PINy with DO Id and chart Id [5] = Trace 1 PINy with block Id and PIN Id		
r4740[0...16383]	Trace 0 trace buffer signal 0 floating point / Trace 0 rec sig 0		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 0. The trace (record) buffer is sub-divided into memory banks, each containing 16384 values. Parameter p4795 can be used to toggle between the individual banks. Example A: The first 16384 values of signal 0, trace 0 are to be read out. In this case, memory bank 0 is set with p4795 = 0. The first 16384 values can now be read out using r4740[0] to r4740[16383]. Example B: The values 16385 to 32768 from signal 0, trace 0 are to be read out. In this case, memory bank 1 is set with p4795 = 1. The values can now be read out in r4740[0] to r4740[16383].		
Dependency:	Refer to: p4795		

r4741[0...16383]	Trace 0 trace buffer signal 1 floating point / Trace 0 rec sig 1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 1.		
Dependency:	Refer to: r4740, p4795		

r4742[0...16383]	Trace 0 trace buffer signal 2 floating point / Trace 0 rec sig 2		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 2.		
Dependency:	Refer to: r4740, p4795		

r4743[0...16383]	Trace 0 trace buffer signal 3 floating point / Trace 0 rec sig 3		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 3.		
Dependency:	Refer to: r4740, p4795		

r4744[0...16383]	Trace 0 trace buffer signal 4 floating point / Trace 0 rec sig 4		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 4.		
Dependency:	Refer to: r4740, p4795		

r4745[0...16383]	Trace 0 trace buffer signal 5 floating point / Trace 0 rec sig 5		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 5.		
Dependency:	Refer to: r4740, p4795		

2 Parameters

2.2 List of parameters

r4746[0...16383]	Trace 0 trace buffer signal 6 floating point / Trace 0 rec sig 6		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 6.		
Dependency:	Refer to: r4740, p4795		
<hr/>			
r4747[0...16383]	Trace 0 trace buffer signal 7 floating point / Trace 0 rec sig 7		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 7.		
Dependency:	Refer to: r4740, p4795		
<hr/>			
r4750[0...16383]	Trace 1 trace buffer signal 0 floating point / Trace 1 rec sig 0		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 0.		
Dependency:	Refer to: r4740, p4795		
<hr/>			
r4751[0...16383]	Trace 1 trace buffer signal 1 floating point / Trace 1 rec sig 1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 1.		
Dependency:	Refer to: r4740, p4795		
<hr/>			
r4752[0...16383]	Trace 1 trace buffer signal 2 floating point / Trace 1 rec sig 2		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 2.		
Dependency:	Refer to: r4740, p4795		

r4753[0...16383] Trace 1 trace buffer signal 3 floating point / Trace 1 rec sig 3

CU_I, CU_NX_CX,	Can be changed: -	Calculated: -	Access level: 3
CU_S_AC_DP,	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
CU_S_AC_PN,	P-Group: Trace and function generator	Unit group: -	Unit selection: -
CU_S120_PN,	Not for motor type: -	Scaling: -	Expert list: 0
CU_S150_PN,	Min	Max	Factory setting
CU_S120_DP,	-	-	-
CU_S150_DP,			
CU_I_D410			

Description: Displays the trace buffer (record buffer) for trace 1 and signal 3.

Dependency: Refer to: r4740, p4795

r4754[0...16383] Trace 1 trace buffer signal 4 floating point / Trace 1 rec sig 4

CU_I, CU_NX_CX,	Can be changed: -	Calculated: -	Access level: 3
CU_S_AC_DP,	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
CU_S_AC_PN,	P-Group: Trace and function generator	Unit group: -	Unit selection: -
CU_S120_PN,	Not for motor type: -	Scaling: -	Expert list: 0
CU_S150_PN,	Min	Max	Factory setting
CU_S120_DP,	-	-	-
CU_S150_DP,			
CU_I_D410			

Description: Displays the trace buffer (record buffer) for trace 1 and signal 4.

Dependency: Refer to: r4740, p4795

r4755[0...16383] Trace 1 trace buffer signal 5 floating point / Trace 1 rec sig 5

CU_I, CU_NX_CX,	Can be changed: -	Calculated: -	Access level: 3
CU_S_AC_DP,	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
CU_S_AC_PN,	P-Group: Trace and function generator	Unit group: -	Unit selection: -
CU_S120_PN,	Not for motor type: -	Scaling: -	Expert list: 0
CU_S150_PN,	Min	Max	Factory setting
CU_S120_DP,	-	-	-
CU_S150_DP,			
CU_I_D410			

Description: Displays the trace buffer (record buffer) for trace 1 and signal 5.

Dependency: Refer to: r4740, p4795

r4756[0...16383] Trace 1 trace buffer signal 6 floating point / Trace 1 rec sig 6

CU_I, CU_NX_CX,	Can be changed: -	Calculated: -	Access level: 3
CU_S_AC_DP,	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
CU_S_AC_PN,	P-Group: Trace and function generator	Unit group: -	Unit selection: -
CU_S120_PN,	Not for motor type: -	Scaling: -	Expert list: 0
CU_S150_PN,	Min	Max	Factory setting
CU_S120_DP,	-	-	-
CU_S150_DP,			
CU_I_D410			

Description: Displays the trace buffer (record buffer) for trace 1 and signal 6.

Dependency: Refer to: r4740, p4795

r4757[0...16383] Trace 1 trace buffer signal 7 floating point / Trace 1 rec sig 7

CU_I, CU_NX_CX,	Can be changed: -	Calculated: -	Access level: 3
CU_S_AC_DP,	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
CU_S_AC_PN,	P-Group: Trace and function generator	Unit group: -	Unit selection: -
CU_S120_PN,	Not for motor type: -	Scaling: -	Expert list: 0
CU_S150_PN,	Min	Max	Factory setting
CU_S120_DP,	-	-	-
CU_S150_DP,			
CU_I_D410			

Description: Displays the trace buffer (record buffer) for trace 1 and signal 7.

Dependency: Refer to: r4740, p4795

r4760[0...16383]	Trace 0 trace buffer signal 0 / Trace 0 rec sig 0		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 0 as integer number.		
Note:	For signals, data type I32 or U32, the trace buffer is assigned as follows: r4760[0] = value 0 r4760[1] = value 1 ... r4760[8191] = value 8191 For signals, data type I16 or U16, the trace buffer is assigned as follows: r4760[0] = value 1 (bit 31 ... 16) and value 0 (bit 15 ... 0) r4760[1] = value 3 (bit 31 ... 16) and value 2 (bit 15 ... 0) ... r4760[8191] = value 16383 (bit 31 ... 16) and value 16382 (bit 15 ... 0) For signals, data type I8 or U8, the trace buffer is assigned as follows: r4760[0] = value 3 (bit 31 ... 24) value 2 (bit 23 ... 16) value 1 (bit 15 ... 8) value 0 (bit 7 ... 0) r4760[1] = value 7 (bit 31 ... 24) value 6 (bit 23 ... 16) value 5 (bit 15 ... 8) value 4 (bit 7 ... 0) ... r4760[8191] = value 32767 (bit 31 ... 24) value 32766 (bit 23 ... 16) value 32765 (bit 15 ... 8) value 32764 (bit 7 ... 0)		

r4761[0...16383]	Trace 0 trace buffer signal 1 / Trace 0 rec sig 1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 1.		
Dependency:	Refer to: r4760		

r4762[0...16383]	Trace 0 trace buffer signal 2 / Trace 0 rec sig 2		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 2.		
Dependency:	Refer to: r4760		

r4763[0...16383]	Trace 0 trace buffer signal 3 / Trace 0 rec sig 3		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 3.		
Dependency:	Refer to: r4760		
r4764[0...16383]	Trace 0 trace buffer signal 4 / Trace 0 rec sig 4		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 4.		
Dependency:	Refer to: r4760		
r4765[0...16383]	Trace 0 trace buffer signal 5 / Trace 0 rec sig 5		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 5.		
Dependency:	Refer to: r4760		
r4766[0...16383]	Trace 0 trace buffer signal 6 / Trace 0 rec sig 6		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 6.		
Dependency:	Refer to: r4760		
r4767[0...16383]	Trace 0 trace buffer signal 7 / Trace 0 rec sig 7		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 7.		
Dependency:	Refer to: r4760		

2 Parameters

2.2 List of parameters

r4770[0...16383]	Trace 1 trace buffer signal 0 / Trace 1 rec sig 0		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 0.		
Dependency:	Refer to: r4760		
<hr/>			
r4771[0...16383]	Trace 1 trace buffer signal 1 / Trace 1 rec sig 1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 1.		
Dependency:	Refer to: r4760		
<hr/>			
r4772[0...16383]	Trace 1 trace buffer signal 2 / Trace 1 rec sig 2		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 2.		
Dependency:	Refer to: r4760		
<hr/>			
r4773[0...16383]	Trace 1 trace buffer signal 3 / Trace 1 rec sig 3		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 3.		
Dependency:	Refer to: r4760		
<hr/>			
r4774[0...16383]	Trace 1 trace buffer signal 4 / Trace 1 rec sig 4		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 4.		
Dependency:	Refer to: r4760		

r4775[0...16383]	Trace 1 trace buffer signal 5 / Trace 1 rec sig 5		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 5.		
Dependency:	Refer to: r4760		

r4776[0...16383]	Trace 1 trace buffer signal 6 / Trace 1 rec sig 6		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 6.		
Dependency:	Refer to: r4760		

r4777[0...16383]	Trace 1 trace buffer signal 7 / Trace 1 rec sig 7		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 7.		
Dependency:	Refer to: r4760		

p4780[0...1]	Trace physical address signal 0 / Trace PhyAddr Sig0		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin
Description:	Sets the physical address for the first signal to be traced. The data type is defined using p4730.		
Index:	[0] = Trace 0 [1] = Trace 1		

2 Parameters

2.2 List of parameters

p4781[0...1]	Trace physical address signal 1 / Trace PhyAddr Sig1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin
Description:	Sets the physical address for the second signal to be traced. The data type is defined using p4731.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4782[0...1]	Trace physical address signal 2 / Trace PhyAddr Sig2		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin
Description:	Sets the physical address for the third signal to be traced. The data type is defined using p4732.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4783[0...1]	Trace physical address signal 3 / Trace PhyAddr Sig3		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin
Description:	Sets the physical address for the fourth signal to be traced. The data type is defined using p4733.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4784[0...1]	Trace physical address signal 4 / Trace PhyAddr Sig4		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin
Description:	Sets the physical address for the fifth signal to be traced. The data type is defined using p4734.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4785[0...1]	Trace physical address signal 5 / Trace PhyAddr Sig5		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin
Description:	Sets the physical address for the sixth signal to be traced. The data type is defined using p4735.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4786[0...1]	Trace physical address signal 6 / Trace PhyAddr Sig6		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin
Description:	Sets the physical address for the seventh signal to be traced. The data type is defined using p4736.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4787[0...1]	Trace physical address signal 7 / Trace PhyAddr Sig7		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin
Description:	Sets the physical address for the eighth signal to be traced. The data type is defined using p4737.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4789[0...1]	Trace physical address trigger signal / Trace PhyAddr Trig		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 hex	Calculated: - Dyn. index: - Unit group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 hex
Description:	Sets the physical address for the trigger signal. The data type is defined by making the appropriate selection in p4711.		
Index:	[0] = Trace 0 [1] = Trace 1		

2 Parameters

2.2 List of parameters

r4790[0...1]	Trace data type 5 traced / Trace rec type 5		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the recorded data type 5 for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
<hr/>			
r4791[0...1]	Trace data type 6 traced / Trace rec type 6		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the recorded data type 6 for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
<hr/>			
r4792[0...1]	Trace data type 7 traced / Trace rec type 7		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the recorded data type 7 for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
<hr/>			
r4793[0...1]	Trace data type 8 traced / Trace rec type 8		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the recorded data type 8 for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4795	Trace memory bank changeover / Trace mem changeov		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 500	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Changes over the memory bank to read out the contents of the trace buffer.		
Dependency:	Refer to: r4740, r4741, r4742, r4743, r4750, r4751, r4752, r4753		
r4797[0...1]	Trace 0 trigger instant / Trace 0 t_trigger		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the instant in time for fulfilling the trigger condition for trace recorder 0. The time comprises milliseconds (index 0) and days (index 1).		
Index:	[0] = Milliseconds [1] = Days		
Dependency:	Refer to: r2114, r3102, r4719		
Notice:	The accuracy of the trigger instant depends on the accuracy of the underlying basis time. For clarification: The trigger instant is calculated with a μs accuracy. If the underlying basis time is only available with ms accuracy, then as a result of rounding effects, an inaccuracy of 1 ms can occur. When referred to r4719, the trigger instant can therefore deviate somewhat.		
Note:	If the time calculation of the drive can be synchronized with a higher-level control, then this time can be taken from the actual UTC time (r3102). Otherwise, the time is based on the system runtime (r2114).		
r4798[0...1]	Trace 1 trigger instant / Trace 1 t_trigger		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the instant in time for fulfilling the trigger condition for trace recorder 1. The time comprises milliseconds (index 0) and days (index 1).		
Index:	[0] = Milliseconds [1] = Days		
Dependency:	Refer to: r2114, r3102, r4719		
Notice:	The accuracy of the trigger instant depends on the accuracy of the underlying basis time. For clarification: The trigger instant is calculated with a μs accuracy. If the underlying basis time is only available with ms accuracy, then as a result of rounding effects, an inaccuracy of 1 ms can occur. When referred to r4719, the trigger instant can therefore deviate somewhat.		
Note:	If the time calculation of the drive can be synchronized with a higher-level control, then this time can be taken from the actual UTC time (r3102). Otherwise, the time is based on the system runtime (r2114).		

r4799	Trace memory location free / Trace mem free		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the free memory for the trace in bytes.		
Dependency:	Refer to: r4708		

p4800	Function generator control / FG control		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	The function generator is started with p4800 = 1. The signal is only generated for a 1 signal of binector input p4819.		
Value:	0: Stop function generator 1: Start function generator 2: Check function generator parameterization 3: Start function generator without enable signals		
Dependency:	Refer to: p4819		

r4805	Function generator status / FG status		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 6	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the actual status of the function generator.		
Value:	0: Inactive 1: Generate accelerating ramp to offset 2: Generate parameterized signal shape 3: Generate braking ramp 4: Function generator stopped due to missing enable signals 5: Function generator waits for BI: p4819 6: Function generator parameterization has been checked		
Dependency:	Refer to: p4800, p4819		

r4806.0	BO: Function generator status signal / FG status signal		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the status of the function generator. 0 signal: Function generator inactive 1 signal: Function generator running		

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Bit 0	ON	OFF	-

p4810	Function generator mode / FG operating mode			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Trace and function generator	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 0	
	Min	Max	Factory setting	
	0	99	0	
Description:	Sets the operating mode of the function generator.			
Value:	0: Connection at connector output r4818 1: Connection at current setpoint after filter and r4818 2: Connection as disturbing torque and r4818 3: Connection at speed setpoint after filter and r4818 4: Connection at current setpoint before filter and r4818 5: Connection at speed setpoint before filter and r4818 6: Connection for free measurement function r4818 and r4834 99: Connection at physical address and r4818			

p4812	Function generator physical address / FG phys address			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -	
	P-Group: Trace and function generator	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 0	
	Min	Max	Factory setting	
	0	4294967295	0	
Description:	Sets the physical address where the function generator is to be connected.			
Dependency:	Only effective when p4810 = 99.			

p4813	Function generator physical address reference value / FG phys addr ref			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Trace and function generator	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 0	
	Min	Max	Factory setting	
	1.00	1000000.00	1.00	
Description:	Sets the reference value for 100 % for referred inputs.			
Dependency:	Only effective when p4810 = 99.			

p4815[0...2]	Function generator drive number / FG drive number			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: Trace and function generator	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 0	
	Min	Max	Factory setting	
	0	65535	0	
Description:	Selects the required drive where the function generator is to be connected.			
Index:	[0] = First drive for connection [1] = Second drive for connection [2] = Third drive for connection			
Dependency:	Only effective when p4810 = 1, 2, 3, 4 or 5.			
Note:	For the function generator, only type SERVO, VECTOR or DC_CTRL type drives can be used.			

2 Parameters

2.2 List of parameters

p4816	Function generator output signal integer number scaling / FG outp integ scal		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Integer32 P-Group: - Not for motor type: - Min -2147483648	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2147483647	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the scaling for the integer number of the output signal for the function generator.		
Dependency:	Refer to: r4805, r4817		
Note:	The parameter can only be changed in the following operating states: r4805 = 0, 4, 6		
r4817	CO: Function generator output signal integer number / FG outp integ no.		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Integer32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Display and connector output for the integer number of the output signal for the function generator.		
Dependency:	Refer to: p4816		
Note:	The value is output independent of the function generator operating mode.		
r4818	CO: Function generator output signal / FG outp_sig		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max - [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting - [%]
Description:	Displays the output signal for the function generator.		
Dependency:	Refer to: p4810		
Note:	The value is displayed independently of the function generator mode.		
p4819	BI: Function generator control / FG control		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 1
Description:	Sets the signal source to control the function generator. When the function generator is running, signal generation is stopped with a 0 signal from BI: p4819 and p4800 is set to 0.		
Dependency:	Refer to: p4800		

p4820	Function generator signal shape / FG signal shape		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 1
Description:	Sets the signal to be generated for the function generator.		
Value:	1: Square-wave 2: Staircase 3: Delta 4: Binary noise - PRBS (Pseudo Random Binary Signal) 5: Sine-wave		
p4821	Function generator period / FG period duration		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.00 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 60000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 1000.00 [ms]
Description:	Sets the period of the signal to be generated for the function generator.		
Dependency:	Ineffective when p4820 = 4 (PRBS).		
p4822	Function generator pulse width / FG pulse width		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.00 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 60000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 500.00 [ms]
Description:	Sets the pulse width for the signal to be generated for the function generator.		
Dependency:	Only effective when p4820 = 1 (square-wave).		
p4823	Function generator bandwidth / FG bandwidth		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.0025 [Hz]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16000.0000 [Hz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 4000.0000 [Hz]
Description:	Sets the bandwidth for the signal to be generated for the function generator.		
Dependency:	Only effective when p4820 = 4 (PRBS). Refer to: p4830 Refer to: A02041		

p4824	Function generator amplitude / FG amplitude		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -1600.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1600.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 5.00 [%]
Description:	Sets the amplitude for the signal to be generated for the function generator.		
Dependency:	Units are dependent on p4810. If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current). If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).		
p4825	Function generator 2nd amplitude / FG 2nd amplitude		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -1600.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1600.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 7.00 [%]
Description:	Sets the second amplitude for the signal to be generated for the function generator.		
Dependency:	Only effective for p4820 = 2 (staircase). Units are dependent on p4810. If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current). If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).		
p4826	Function generator offset / FG offset		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -1600.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1600.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0.00 [%]
Description:	Sets the offset (DC component) of the signal to be generated for the function generator.		
Dependency:	Units are dependent on p4810. If p4810 = 1, 2, 4: The offset is referred to p2002 (reference current). If p4810 = 3, 5: The offset is referred to p2000 (reference speed). If p4810 = 2: In order to avoid the undesirable effects of play (backlash), the offset does not act on the current setpoint, but instead on the speed setpoint.		
p4827	Function generator ramp-up time to offset / FG ramp-up offset		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.00 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 32.00 [ms]
Description:	Sets the ramp-up time to the offset for the function generator.		

p4828	Function generator lower limit / FG lower limit		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -10000.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 0.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -100.00 [%]
Description:	Sets the lower limit for the function generator.		
Dependency:	For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).		
p4829	Function generator upper limit / FG upper limit		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10000.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 100.00 [%]
Description:	Sets the upper limit for the function generator.		
Dependency:	For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).		
p4830	Function generator time slice cycle / FG time slice		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.03125 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2.00000 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0.12500 [ms]
Description:	Sets the time slice cycle in which the function generator is called.		
p4831	Function generator amplitude scaling / FG amplitude scal		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.00000 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 200.00000 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 100.00000 [%]
Description:	Sets the scaling for the amplitude of the signal waveforms for all output channels. The value can be changed while the function generator is running.		
p4832[0...2]	Function generator amplitude scaling / FG amplitude scal		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -340.28235E36 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 340.28235E36 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 100.00000 [%]
Description:	Sets the scaling for the amplitude of the signal waveforms separately for each output channel. The value cannot be changed while the function generator is running.		

2 Parameters

2.2 List of parameters

Index: [0] = First drive for connection
 [1] = Second drive for connection
 [2] = Third drive for connection

p4833[0...2]	Function generator offset scaling / FG offset scal		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -340.28235E36 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 340.28235E36 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 100.00000 [%]

Description: Sets the scaling for the offset of the signal waveforms separately for each output channel.
 The value cannot be changed while the function generator is running.

Index: [0] = First drive for connection
 [1] = Second drive for connection
 [2] = Third drive for connection

r4834[0...4]	CO: Function generator free measurement output signal / FG fr MeasFct outp		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max - [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting - [%]

Description: Displays the output signal for the free measurement function.

Index: [0] = Signal 1
 [1] = Signal 2
 [2] = Signal 3
 [3] = Signal 4
 [4] = Signal 5

Dependency: Refer to: p4810

Note: The signals are only output in the "free measurement function" operating mode (p4810 = 6)

p4835[0...4]	Function generator free measurement function scaling / FG fr MeasFct scal		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -200.00000 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 200.00000 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 100.00000 [%]

Description: Sets the scaling of the output signals for the free measurement function.

Index: [0] = Signal 1
 [1] = Signal 2
 [2] = Signal 3
 [3] = Signal 4
 [4] = Signal 5

Note: The parameter cannot be changed when the measurement function has been started (r4706 = 2, 3).

p4840[0...1]	MTrace cycle number setting / Cycle number		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4294967295	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the number of cycles of a multiple trace. The multiple trace is deactivated with a value = 0.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Refer to: r4841, p4844 Refer to: A02097, A02098		
Notice:	A multiple trace can have a negative impact on the total system performance. From their inherent principle of operation, flash memory cards are subject to wear as a result of write operations. As a consequence, the lifetime of flash memory cards is reduced when using the multiple trace functionality.		
r4841[0...1]	MTrace cycle actual display / Cycle act display		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the currently running cycle (including deadtime) of the multiple trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Refer to: p4840, p4844		
p4844[0...1]	MTrace ring buffer files number / Ring buff file qty		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: T Data type: Unsigned16 P-Group: Trace and function generator Not for motor type: - Min 10	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 10
Description:	Sets the number of ring buffer files for the measurement results of the multiple trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Refer to: p4840, r4841		

r4899	Status word sequence control / ZSW seq_ctrl		
TM41	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status word of the sequence control from Terminal Module 41 (TM41).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Ready for switching on	Yes	No	-
	01	Ready	Yes	No	-
	02	Operation enabled	Yes	No	-
	03	Fault present	Yes	No	-
	04	Coast down active	No	Yes	-
	05	Quick Stop active	No	Yes	-
	06	Switching-on inhibited	Yes	No	-
	07	Alarm present	Yes	No	-
	09	Control request	Yes	No	-
	14	Motor rotates forwards	Yes	No	-

r4950	TEC DO-specific number / TEC DO qty		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	16	-

Description: Number of Technology Extensions installed on this drive object.

Dependency: Refer to: r4951, r4952, r4955, p4956, r4957, r4958, r4959, r4960

Note: DO: Drive Object
TEC: Technology Extension

r4951	TEC DO-specific identifier total length / TEC DO ident tot_l		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	144	-

Description: Displays the total length of the identifiers of the Technology Extensions installed on this drive object.

Dependency: Refer to: r4950, r4952, r4955, p4956, r4957, r4958, r4959, r4960

Note: The identifier of a Technology Extension comprises a maximum of 8 characters plus separator.
TEC: Technology Extension

r4952	TEC DO-specific GUID total length / TEC DO GUID length		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	288	-

Description: Displays the total length of the GUIDs of the Technology Extensions installed on this drive object.

Dependency: Refer to: r4950, r4951, r4955, p4956, r4957, r4958, r4959, r4960

Note: The GUID of a Technology Extension comprises 16 characters plus 1 character major information plus 1 character, minor information.
 GUID: Globally Unique Identifier
 TEC: Technology Extension

r4955[0...n]	TEC DO-specific identifier / TEC DO ident		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: r4951	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the identifier of the Technology Extensions installed on this drive object. r4955[0...8]: Identifier of Technology Extension 1 r4955[9...17]: Identifier of Technology Extension 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, p4956, r4957, r4958, r4959, r4960		
Notice:	If there is no Technology Extension, then it is not possible to access an index.		
Note:	TEC: Technology Extension		

p4956[0...n]	TEC DO-specific activation / TEC DO act		
All objects	Can be changed: C1, T	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: r4950	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to activate the Technology Extensions installed on this drive object. r4956[0]: Activation of Technology Extension 1 r4956[1]: Activation of Technology Extension 2, ...		
Value:	0: Technology Extension inactive 1: Technology Extension active		
Dependency:	Refer to: r4950, r4951, r4952, r4955, r4957, r4958, r4959, r4960		
Notice:	If there is no Technology Extension, then it is not possible to access an index.		
Note:	TEC: Technology Extension		

r4957[0...n]	TEC DO-specific version / TEC DO Version		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: r4950	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4294967295	-
Description:	Displays the version of the Technology Extensions installed on this drive object. r4957[0]: Version of Technology Extension 1 r4957[1]: Version of Technology Extension 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4958, r4959, r4960		
Notice:	If there is no Technology Extension, then it is not possible to access an index.		
Note:	TEC: Technology Extension Example: The value 1010100 should be interpreted as V01.01.01.00.		

r4958[0...n]	TEC DO-specific interface version / TEC DO interf_ vers		
All objects	Can be changed: - Data type: Unsigned32 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4950 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the interface version of Technology Extensions installed on this drive object. r4958[0]: Interface version of Technology Extension 1 r4958[1]: Interface version of Technology Extension 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4959, r4960		
Notice:	If there is no Technology Extension, then it is not possible to access an index.		
Note:	TEC: Technology Extension Example: The value 1010100 should be interpreted as V01.01.01.00.		
r4959[0...n]	TEC DO-specific GUID / TEC DO GUID		
All objects	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4952 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the GUIDs of the Technology Extensions installed on this drive object. r4959[0...15]: GUID of Technology Extension 1 r4959[16]: Major information of Technology Extension 1 r4959[17]: Minor information of Technology Extension 1 r4959[18...33]: GUID of Technology Extension 2 r4959[34]: Major information of Technology Extension 2 r4959[35]: Minor information of Technology Extension 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4960		
Notice:	If there is no Technology Extension, then it is not possible to access an index.		
Note:	TEC: Technology Extension		
r4960[0...n]	TEC DO-specific GUID drive object / TEC DO GUID DO		
All objects	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4952 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the GUIDs of this drive object of the Technology Extensions installed on the memory card/device memory. r4960[0...15]: GUID of this drive object of Technology Extension 1 r4960[16]: Major information of this drive object of Technology Extension 1 r4960[17]: Minor information of this drive object of Technology Extension 1 r4960[18...33]: GUID of this drive object of Technology Extension 2 r4960[34]: Major information of this drive object of Technology Extension 2 r4960[35]: Minor information of this drive object of Technology Extension 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4959		
Notice:	If there is no Technology Extension, then it is not possible to access an index.		
Note:	TEC: Technology Extension		

p4961[0...n]	TEC DO-specific logbook module selection / TEC DO log module		
All objects	Can be changed: T	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: r4950	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0000 hex	Max FFFF FFFF hex	Factory setting 0000 hex
Description:	Only for service purposes.		
Note:	TEC: Technology Extension		
r4975	TEC invalid number / TEC inval qty		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting -
Description:	Displays the number of invalid Technology Extensions installed on the memory card/device memory.		
Dependency:	Refer to: r4976, r4978, r4979		
Note:	TEC: Technology Extension		
r4976	TEC invalid identifier total length / TEC inval ID tot_l		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting -
Description:	Displays the total length of the IDs of all the invalid Technology Extensions installed on the memory card/device memory.		
Dependency:	Refer to: r4975, r4978, r4979		
Note:	TEC: Technology Extension The identifier of an invalid Technology Extension comprises a maximum of 8 characters plus separator.		
r4978[0...n]	TEC invalid identifier / TEC inval ID		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: r4976	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting -
Description:	Displays the IDs of all the invalid Technology Extensions installed on the memory card/device memory. r4978[0...8]: Identifier of invalid Technology Extension 1 r4978[9...17]: Identifier of invalid Technology Extension 2, ...		
Dependency:	Refer to: r4975, r4976, r4979		
Notice:	An index cannot be accessed if there is no valid Technology Extension available.		
Note:	TEC: Technology Extension		

r4979[0...n]	TEC invalid error code / TEC inv error code		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4975 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the error code of the invalid Technology Extensions installed on the memory card/device memory. r4979[0]: Fault value of Technology Extension 1 r4979[1]: Fault value of Technology Extension 2, ...		
Dependency:	Refer to: r4975, r4976, r4978		
Notice:	An index cannot be accessed if there is no valid Technology Extension available.		
Note:	TEC: Technology Extension The value in the error code must be interpreted in binary form. The bits have the following meaning: Bit 0: Incompatible version of the TEC interface. Bit 1: Technology Extension could not be loaded. Bit 2: Incorrect description files. Bit 3: Technology Extension does not define a CPU type. Bit 4: Technology Extension for this device not available (incorrect CPU type). Bit 5: Technology Extension for this device not available (incorrect type ID). Bit 6: Incorrect description files (Const/Startup incompatible).		
r4985	TEC number / TEC qty		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned16 P-Group: OEM range Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of Technology Extensions installed on the memory card/device memory.		
Dependency:	Refer to: r4986, r4987, r4988, r4989, r4990, r4991, r4992, r4993, r4994		
Note:	TEC: Technology Extension		
r4986	TEC identifier total length / TEC ident tot_l		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned16 P-Group: OEM range Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 144	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the total length of the IDs of all the Technology Extensions installed on the memory card/device memory.		
Dependency:	Refer to: r4985, r4987, r4988, r4989, r4990, r4991, r4992, r4993, r4994		
Note:	TEC: Technology Extension The identifier of a Technology Extension comprises a maximum of 8 characters plus separator.		

r4987	TEC GUID total length / TEC GUID tot_lgth		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned16 P-Group: OEM range Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 288	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the total length of the GUIDs of all the Technology Extensions installed on the memory card/device memory.		
Dependency:	Refer to: r4985, r4986, r4988, r4989, r4990, r4991, r4992, r4993, r4994		
Note:	The GUID of a Technology Extension comprises 16 characters plus 1 character major information plus 1 character, minor information. GUID: Globally Unique Identifier TEC: Technology Extension		
r4988[0...n]	TEC identifier / TEC ident		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4986 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the IDs of all the Technology Extensions installed on the memory card/device memory. r4988[0...8]: Identifier of Technology Extension 1 r4988[9...17]: Identifier of Technology Extension 2, ...		
Dependency:	Refer to: r4985, r4986, r4987, r4989, r4990, r4991, r4992, r4993, r4994		
Notice:	If there is no Technology Extension, then it is not possible to access an index.		
Note:	TEC: Technology Extension		
r4989[0...n]	TEC version / TEC version		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4985 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the version of all the Technology Extensions installed on the memory card/device memory. r4989[0]: Version of Technology Extension 1 r4989[1]: Version of Technology Extension 2, ...		
Dependency:	Refer to: r4985, r4986, r4987, r4988, r4990, r4991, r4992, r4993, r4994		
Notice:	If there is no Technology Extension, then it is not possible to access an index.		
Note:	TEC: Technology Extension Example: The value 1010100 should be interpreted as V01.01.01.00.		

r4990[0...n]	TEC interface version / TEC interf_vers		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4985 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the interface version of all the Technology Extensions installed on the memory card/device memory. r4990[0]: Interface version of Technology Extension 1 r4990[1]: Interface version of Technology Extension 2, ...		
Dependency:	Refer to: r4985, r4986, r4987, r4988, r4989, r4991, r4992, r4993, r4994		
Notice:	If there is no Technology Extension, then it is not possible to access an index.		
Note:	TEC: Technology Extension Example: The value 1010100 should be interpreted as V01.01.01.00.		

r4991[0...n]	TEC GUID / TEC GUID		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4987 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the GUIDs of all the Technology Extensions installed on the memory card/device memory. r4991[0...15]: GUID of Technology Extension 1 r4991[16]: Major information of Technology Extension 1 r4991[17]: Minor information of Technology Extension 1 r4991[18...33]: GUID of Technology Extension 2 r4991[34]: Major information of Technology Extension 2 r4991[35]: Minor information of Technology Extension 2, ...		
Dependency:	Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4992, r4993, r4994		
Notice:	If there is no Technology Extension, then it is not possible to access an index.		
Note:	TEC: Technology Extension		

r4992[0...n]	TEC GUID ES / TEC GUID ES		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4987 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the GUIDs of all the Technology Extensions installed on the memory card/device memory. r4992[0...15]: GUID of Technology Extension 1 r4992[16]: Major information of Technology Extension 1 r4992[17]: Minor information of Technology Extension 1 r4992[18...33]: GUID of Technology Extension 2 r4992[34]: Major information of Technology Extension 2 r4992[35]: Minor information of Technology Extension 2, ...		
Dependency:	Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4991, r4993, r4994		
Notice:	If there is no Technology Extension, then it is not possible to access an index.		
Note:	TEC: Technology Extension		

r4993[0...n]		TEC activation status / TEC act stat																																											
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Integer16 P-Group: OEM range Not for motor type: - Min 0	Calculated: - Dyn. index: r4985 Unit group: - Scaling: - Max 1	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -

2 Parameters

2.2 List of parameters

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r5000	CO: Spindle properties/status / Prop/status				
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: -	Calculated: -	Access level: 1		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the properties supported by the spindle hardware and status.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Spindle functionality available	Yes	No	-
	01	Sensor S1 available	Yes	No	-
	04	Sensor S4 available	Yes	No	-
	05	Sensor S5 available	Yes	No	-
	06	Sensor S6 available	Yes	No	-
	10	State machine enabled	Yes	No	-
	11	Parameter p5043 changed	State 2	State 1	-
Note:	This display value is contained in the manufacturer-specific telegram 139 (SP_CONFIG). For bit 11: After each change in p5043[0..6] the signal level of this bit is changed.				

r5001	CO: Spindle clamp state / Clamp state			
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: -	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	11	-	
Description:	Display and connector output for the clamped state. Message A3x940 is output in states 2 and 11. The voltage threshold values for the states can be set using parameter p5041. The hysteresis is adapted using parameter p5040. The transition from state 4 to states 7, 8 or 10 can be influenced by the wait time p5042[0]. A transition is made into state 10 if the analog value in p5002 falls below the voltage threshold value in p5041[4]. However, if the analog value p5002 lies below the voltage threshold value in p5041[2] and the wait time in p5042[0] has expired, then a transition is made into state 7 or 8 - otherwise state 4 is kept.			
Value:	0: System being initialized 1: State being initialized 2: Released with message 3: Released without message 4: Clamping 5: Releasing 6: Releasing without tool 7: Clamped with tool (S4 inactive) 8: Clamped with tool (S4 active) 9: Clamping without tool 10: Clamped without tool 11: Clamped with message			
Dependency:	Refer to: r5002, r5003, p5040, p5041, p5042			
Note:	This display value is contained in the manufacturer-specific telegram 139 (SP_ZSW).			

r5002		CO: Spindle analog sensor S1 measured value / Ana_sensS1 MeasVal		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: -	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Display and connector output for the measured value from analog sensor S1 (1 increment = 1 mV).			
Note:	This display value is contained in the manufacturer-specific telegram 139 (SP_XIST_A).			

r5003		CO: Spindle digital sensors status / Dig_sens status			
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: -	Calculated: -	Access level: 1		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Display and connector output for the status of the digital sensors.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	04	Sensor S4 piston end position reached	Yes	No	-
	05	Sensor S5 axis position OK	Yes	No	-
	06	Sensor S6 reserved	-	-	-
Note:	This display value is contained in the manufacturer-specific telegram 139 (SP_XIST_D).				

r5005		Spindle file system status / File sys stat			
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the status for the file system on the non-volatile memory. The individual result data and characteristic data are summarized in a corresponding file.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	01	Result data clamping cycle thresholds available	Yes	No	-
	02	Result data clamping cycle counter available	Yes	No	-
	03	Result data operating hours counter available	Yes	No	-
	04	Result data temperature diagnostics available	Yes	No	-
	05	Result data real time clock synchronization available	Yes	No	-
	06	Result data speed/torque matrix available	Yes	No	-
	10	Result data collision detection available	Yes	No	-
	11	Result data system detection available	Yes	No	-
	16	Characteristic data spindle available	Yes	No	-
	17	Characteristic data clamping cycle counter available	Yes	No	-
	19	Characteristic data operating hours counter available	Yes	No	-
	20	Characteristic data temperature diagnostics available	Yes	No	-

2 Parameters

2.2 List of parameters

22	Characteristic data speed/torque matrix available	Yes	No	-
30	Characteristic data sensor description available	Yes	No	-
31	Characteristic data sensor calibration data available	Yes	No	-

Note: This parameter can only be used in conjunction with a Sensor Module Integrated 24 (SMI24).

p5007

Spindle file system selection / File sys select

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T

Calculated: -

Access level: 3

Data type: Unsigned32

Dyn. index: -

Func. diagram: -

Unit group: -

Unit selection: -

Not for motor type: -

Scaling: -

Expert list: 1

Min

Max

Factory setting

-

-

0000 0000 0000 0000 0000
0000 0000 0000 bin

Description: Sets the files to adapt the file system.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	01	Result data clamping cycle thresholds selected	Yes	No	-
	02	Result data clamping cycle counter selected	Yes	No	-
	03	Result data operating hours counter selected	Yes	No	-
	04	Result data temperature diagnostics selected	Yes	No	-
	05	Result data real time clock synchronization selected	Yes	No	-
	06	Result data speed/torque matrix selected	Yes	No	-
	10	Result data collision detection selected	Yes	No	-
	11	Result data system detection selected	Yes	No	-
	17	Characteristic data clamping cycle counter selected	Yes	No	-
	19	Characteristic data operating hours counter selected	Yes	No	-
	20	Characteristic data temperature diagnostics selected	Yes	No	-
	22	Characteristic data speed/torque matrix selected	Yes	No	-

Note: This parameter can only be used in conjunction with a Sensor Module Integrated 24 (SMI24).

The action to adapt the selected files is selected in p5009.

For bit 01:

The action selected in p5009 only becomes immediately effective for this bit.

For bit 02 ... 22:

Only for internal Siemens use.

For this bit, after setting p5009, a hardware reset is required.

p5009

Adapt spindle file system / Adapt file sys

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T

Calculated: -

Access level: 3

Data type: Integer16

Dyn. index: -

Func. diagram: -

P-Group: -

Unit group: -

Unit selection: -

Not for motor type: -

Scaling: -

Expert list: 1

Min

Max

Factory setting

0

53

0

Description: Setting to adapt the file system on the non-volatile memory.

Example:

The result data "clamping cycle thresholds" are available (r5005.1 = 1) and should be reset.

--> set p5007.1 = 1: select result data "clamping cycle thresholds".

--> set p5009 = 1: initiate "reset" function for the file selected in p5007.

- > p5009 = 40: feedback signal during "operation running".
 --> p5009 = 20: feedback signal for a successfully completed operation.
 --> p5009 = 51 ... 53: fault values if the operation was not able to be successfully completed.
 --> carry out a POWER ON (switch-off/switch-on).

Value:	0: No function
	1: Reset
	2: Set invalid
	3: Reserved
	5: Set valid
	20: Operation successfully completed.
	40: Operation running
	51: Function not supported
	52: File access unsuccessful
	53: Operation unsuccessful

Note: This parameter can only be used in conjunction with a Sensor Module Integrated 24 (SMI24).
 Help for fault value = 51 ... 53:
 - repeat the operation.

r5012 Spindle Sensor Module properties / SM properties

SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the Sensor Module Integrated 24 (SMI24) properties.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Display diagnostics stamp in UTC	Yes	No	-
	01	Clamping state counter extended	Yes	No	-
	02	Release times display available	Yes	No	-
	03	Release times available	Yes	No	-

p5016 Enable spindle commissioning / Enable comm

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: Setting to enable/inhibit spindle commissioning.
 Enabling spindle commissioning results in the spindle parameters being reset after commissioning has been initiated (e.g. via p0340 > 0 or p3900 > 0).

Depending on the spindle configuration, the following parameters are reset:
 p0353, p0410, p0431, p0922, p1231, p1300, p1980, p1981, p1982

Value:	0: Spindle commissioning enabled
	1: Spindle commissioning inhibited

Dependency: Refer to: p0340, p3900

Note: This parameter can only be used in conjunction with a Sensor Module Integrated 24 (SMI24).
 The parameter is automatically set to a value of 1 after exiting commissioning (p0009 = 0).

p5019	Spindle password / Password		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned16 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -

Description: Sets the password for the spindle diagnostics write parameters.
Number range for spindle diagnostics:
5000 ... 5169

Note: This parameter can only be used in conjunction with a Sensor Module Integrated 24 (SMI24).

r5020	Spindle manufacturer / Manufacturer		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: - Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 48	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -

Description: Displays the spindle manufacturer.

Value:
0: Unknown
1: Siemens AG Automation and Drives
32: Reserved
33: Reserved
48: WEISS Spindeltechnologie GmbH

r5021[0...18]	Spindle article number / Article No.		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: - Data type: Unsigned8 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -

Description: Display of the article number (MFLB) or drawing number of the spindle.

Notice: An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

r5022[0...15]	Spindle serial number / Serial No.		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: - Data type: Unsigned8 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -

Description: Displays the spindle serial number.

Notice: An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

r5023	Spindle production date / Prod_date			
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: - Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Displays the production date of the spindle.			
Note:	Format: yyyyymmdd			
r5032	Maximum spindle speed / n_max			
SERVO (Lin, Spin_diag), SERVO_AC (Lin, Spin_diag), SERVO_I_AC (Lin, Spin_diag)	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [m/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [m/min]	
Description:	Displays the maximum spindle speed.			
Note:	The highest possible (maximum) speed is set using p1082 (p1082 <= r5032).			
r5032	Maximum spindle speed / n_max			
SERVO (Spin_diag), SERVO_AC (Spin_diag), SERVO_I_AC (Spin_diag)	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [rpm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [rpm]	
Description:	Displays the maximum spindle speed.			
Note:	The highest possible (maximum) speed is set using p1082 (p1082 <= r5032).			
r5033	Spindle angular commutation offset / Commut_ang_off			
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min - [°]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [°]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [°]	
Description:	Displays the angular commutation offset for the spindle encoder.			
Note:	When exiting commissioning, the value is transferred into p0431.			
r5034	Spindle current controller sampling time maximum / I_ctrl t_samp max			
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min - [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [µs]	
Description:	Displays the maximum recommended sampling time for the spindle current controller. The current controller sampling time must be set greater than the value in p0112 or p0115[0]. For r5034 < p0115[0], alarm A07140 is output.			
Dependency:	Refer to: A07140			

2 Parameters

2.2 List of parameters

p5040	Spindle voltage threshold values tolerance / U_thresh tol		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [mV]	1000.0 [mV]	0.0 [mV]
Description:	Sets the voltage tolerance for the voltage threshold values. The tolerance acts symmetrically around the individual voltage threshold values (p5041[0...5]).		
Dependency:	Refer to: r5001, r5002, p5041		

p5041[0...5]	Spindle voltage threshold values / U_thresh		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [mV]	340.28235E36 [mV]	0.0 [mV]
Description:	Sets the voltage threshold values for the spindle.		
Index:	[0] = Released (upper limit) [1] = Released (lower limit) [2] = Clamped with tool (upper limit) [3] = Clamped with tool (lower limit) [4] = Clamped without tool (upper limit) [5] = Clamped without tool (lower limit)		
Dependency:	Refer to: r5001, r5002, p5040		
Note:	Only values can be entered, which do not overlap, taking into consideration the set tolerance (p5040).		

p5042[0...1]	Spindle transition times / t_transition		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [µs]	340.28235E36 [µs]	0.0 [µs]
Description:	Sets the transition times for the clamping state machine of the spindle. For index 0: Sets the maximum time for staying in the state r5001 = 4, before a transition is made to state r5001 = 10 or 7/8. A higher value can force a direct transition from state r5001 = 4 to 10 without passing through the states r5001 = 7/8 and 9. For index 1: Sets the maximum time for clamping without tool (see clamping operations inside and outside the tolerance in p5045).		
Index:	[0] = Stabilization time for "clamped with tool" [1] = Maximum time to clamp		
Dependency:	Refer to: r5001, r5002		
Note:	The input is limited to a maximum value of 20 seconds.		

p5043[0...6]	Spindle speed limits / n_limits		
SERVO (Lin, Spin_diag), SERVO_AC (Lin, Spin_diag), SERVO_I_AC (Lin, Spin_diag)	Can be changed: T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0.0 [m/min]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535.0 [m/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [m/min]
Description:	Sets the speed limits for the clamping state machine of the spindle. For index 0: Valid for state r5001 = 3. For index 1: Valid for state r5001 = 4. For index 2: Valid for state r5001 = 5. For index 3: Valid for state r5001 = 6. For index 4: Valid for state r5001 = 7/8. For index 5: Valid for state r5001 = 9. For index 6: Valid for state r5001 = 10.		
Index:	[0] = Released [1] = Clamping [2] = Releasing from the state "clamped with tool" [3] = Releasing from the state "clamped without tool" [4] = Clamped with tool [5] = Clamping without tool [6] = Clamped without tool		
Dependency:	Refer to: r5001		
Note:	For state r5001 = 0, 1, 2 or 11, the fixed speed limit 0 applies.		

p5043[0...6]	Spindle speed limits / n_limits		
SERVO (Spin_diag), SERVO_AC (Spin_diag), SERVO_I_AC (Spin_diag)	Can be changed: T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0.0 [rpm]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535.0 [rpm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [rpm]
Description:	Sets the speed limits for the clamping state machine of the spindle. For index 0: Valid for state r5001 = 3. For index 1: Valid for state r5001 = 4. For index 2: Valid for state r5001 = 5. For index 3: Valid for state r5001 = 6. For index 4: Valid for state r5001 = 7/8. For index 5: Valid for state r5001 = 9. For index 6: Valid for state r5001 = 10.		

2 Parameters

2.2 List of parameters

Index: [0] = Released
 [1] = Clamping
 [2] = Releasing from the state "clamped with tool"
 [3] = Releasing from the state "clamped without tool"
 [4] = Clamped with tool
 [5] = Clamping without tool
 [6] = Clamped without tool

Dependency: Refer to: r5001

Note: For state r5001 = 0, 1, 2 or 11, the fixed speed limit 0 applies.

r5044	Maximum permissible spindle velocity limit / Spin v_lim MaxPerm		
SERVO (Lin, Spin_diag), SERVO_AC (Lin, Spin_diag), SERVO_I_AC (Lin, Spin_diag)	Can be changed: -	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Displays the maximum permissible velocity limit.		
Dependency:	Refer to: r5001, p5043		
Note:	Currently, the velocity limit is only displayed for the state "clamped without tool". The velocity limit set in p5043[6] is effective. Value = 65535: velocity limit not active.		

r5044	Maximum permissible spindle speed limit / Spin n_lim MaxPerm		
SERVO (Spin_diag), SERVO_AC (Spin_diag), SERVO_I_AC (Spin_diag)	Can be changed: -	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the maximum permissible speed limit.		
Dependency:	Refer to: r5001, p5043		
Note:	Currently, the speed limit is only displayed for the state "clamped without tool". The speed limit set in p5043[6] is effective. Value = 65535: speed limit not active.		

r5170[0...5]	HF phase current actual values / HF I_ph act val		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 6_5	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Displays the measured phase currents as peak value.		
Index:	[0] = Phase U motor current [1] = Phase V motor current [2] = Phase W motor current [3] = Phase U capacitor current [4] = Phase V capacitor current [5] = Phase W capacitor current		
Dependency:	Refer to: r0069		

Note: HF: High Frequency Drive
 For index 0 ... 2:
 The 3 motor phase currents are displayed.
 For index 3 ... 5:
 The currents in the filter capacitors of the 3 phases are displayed.

r5171 **CO: HF damping voltage actual value / HF U_damp act val**

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 5_2	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]

Description: Displays the actual value of the damping voltage.
Dependency: Refer to: F37002
Note: HF: High Frequency Drive

r5172[0...3] **CO: HF temperatures / HF temp**

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]

Description: Displays the temperatures in the HF Choke Module and HF Damping Module.
Index:
 [0] = HF Choke Module heat sink
 [1] = HF Damping Module heat sink
 [2] = HF Damping Module assembly
 [3] = HF Damping Module depletion layer
Note: The value of -200 indicates that there is no measuring signal.
 HF Choke Module (reactor module)
 HF Damping Module
 HF: High Frequency Drive

r5173 **CO: HF Damping Module I2t overload / HF DM overl I2t**

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]

Description: Displays the overload of the filter capacitors of the HF Damping Module determined using an I2t calculation.
Note: HF Damping Module

2 Parameters

2.2 List of parameters

p5174		HF control word / HF control word																	
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T Data type: Unsigned16 P-Group: Displays, signals Not for motor type: - Min -	Calculated: CALC_MOD_REG Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin																
Description:	Setting the HF control word.																		
Bit field:	<table border="1"> <thead> <tr> <th>Bit</th> <th>Signal name</th> <th>1 signal</th> <th>0 signal</th> <th>FP</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>Supplementary capacitor active</td> <td>Yes</td> <td>No</td> <td>-</td> </tr> <tr> <td>01</td> <td>Activate damping</td> <td>Continuously</td> <td>For pulse enable</td> <td>-</td> </tr> </tbody> </table>	Bit	Signal name	1 signal	0 signal	FP	00	Supplementary capacitor active	Yes	No	-	01	Activate damping	Continuously	For pulse enable	-			
Bit	Signal name	1 signal	0 signal	FP															
00	Supplementary capacitor active	Yes	No	-															
01	Activate damping	Continuously	For pulse enable	-															
Note:	For bit 00: This bit can be used to compensate the filter resonance frequency shift for low motor inductances. For bit 01: Is used for diagnostic purposes.																		

r5175[0...1]		HF diagnostics / HF diag		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: Unsigned16 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Displays the status and control word for the HF Damping Module.			
Index:	[0] = HF Damping Module status word [1] = HF Damping Module control word			
Note:	HF Damping Module			

p5200[0...n]		Current setpoint filter 5 ... 10 activation / I_setp_filt act																																					
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 0000 0000 bin																																				
Description:	Setting for activating/deactivating the current setpoint filter.																																						
Bit field:	<table border="1"> <thead> <tr> <th>Bit</th> <th>Signal name</th> <th>1 signal</th> <th>0 signal</th> <th>FP</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>Filter 5</td> <td>Active</td> <td>Inactive</td> <td>-</td> </tr> <tr> <td>01</td> <td>Filter 6</td> <td>Active</td> <td>Inactive</td> <td>-</td> </tr> <tr> <td>02</td> <td>Filter 7</td> <td>Active</td> <td>Inactive</td> <td>-</td> </tr> <tr> <td>03</td> <td>Filter 8</td> <td>Active</td> <td>Inactive</td> <td>-</td> </tr> <tr> <td>04</td> <td>Filter 9</td> <td>Active</td> <td>Inactive</td> <td>-</td> </tr> <tr> <td>05</td> <td>Filter 10</td> <td>Active</td> <td>Inactive</td> <td>-</td> </tr> </tbody> </table>	Bit	Signal name	1 signal	0 signal	FP	00	Filter 5	Active	Inactive	-	01	Filter 6	Active	Inactive	-	02	Filter 7	Active	Inactive	-	03	Filter 8	Active	Inactive	-	04	Filter 9	Active	Inactive	-	05	Filter 10	Active	Inactive	-			
Bit	Signal name	1 signal	0 signal	FP																																			
00	Filter 5	Active	Inactive	-																																			
01	Filter 6	Active	Inactive	-																																			
02	Filter 7	Active	Inactive	-																																			
03	Filter 8	Active	Inactive	-																																			
04	Filter 9	Active	Inactive	-																																			
05	Filter 10	Active	Inactive	-																																			
Dependency:	The individual current setpoint filters are parameterized from p5201 and higher.																																						
Note:	If not all of the filters are required, then the filters should be used consecutively starting from filter 1.																																						

p5200		Signal filter activation / I_act_filt act		
A_INF (Suppl cl-loop ctrl), R_INF (Suppl cl-loop ctrl)	Can be changed: U, T Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: CALC_MOD_CON Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin	
Description:	Setting for activating/deactivating the signal filter.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Filter 5	Active	Inactive
	02	Filter 7	Active	Inactive
				FP
				-
				-
Dependency:	The signal filters are parameterized from p5201 and higher.			

p5201[0...n]		Current setpoint filter 5 type / I_set_filt 5 type		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: Integer16 P-Group: Closed-loop control Not for motor type: REL Min 1	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 1	
Description:	Sets the current setpoint filter 5 as low pass (PT2) or general 2nd order filter.			
Value:	1: PT2 low pass 2: General 2nd order filter			
Dependency:	Current setpoint filter 5 is activated via p5200.0 and parameterized via p5202 ... p5205.			
Note:	For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed. The denominator damping can be determined from the equation for the 3 dB bandwidth: $f_{3dB\ bandwidth} = 2 * D_{denominator} * f_{bandstop\ frequency}$			

p5201		Output voltage setpoint filter 5 type / U_set_filt 5 type		
A_INF (Suppl cl-loop ctrl), R_INF (Suppl cl-loop ctrl)	Can be changed: U, T Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 1	Calculated: CALC_MOD_CON Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2	
Description:	Sets the output voltage setpoint filter 5 as low pass (PT2) or as extended general 2nd order filter.			
Value:	1: PT2 low pass 2: General 2nd order filter			
Dependency:	Filter 5 is activated via p5200.0 and parameterized via p5202 ... p5205.			
Note:	For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed. The denominator damping can be determined from the equation for the 3 dB bandwidth: $f_{3dB\ bandwidth} = 2 * D_{denominator} * f_{bandstop\ frequency}$

p5207[0...n]	Current setpoint filter 6 denominator natural frequency / I_set_filt6 fn_den		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.5 [Hz]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 16000.0 [Hz]	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 1999.0 [Hz]

Description: Sets the denominator natural frequency for current setpoint filter 6 (PT2, general filter).
Dependency: Current setpoint filter 6 is activated via p5200.1 and parameterized via p5207 ... p5210.

p5208[0...n]	Current setpoint filter 6 denominator damping / I_set_filt 6 D_den		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.001	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10.000	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 0.700

Description: Sets the denominator damping for current setpoint filter 6 (PT2, general filter).
Dependency: Current setpoint filter 6 is activated via p5200.1 and parameterized via p5207 ... p5210.

p5209[0...n]	Current setpoint filter 6 numerator natural frequency / I_set_filt6 fn_num		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.5 [Hz]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 16000.0 [Hz]	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 1999.0 [Hz]

Description: Sets the numerator natural frequency for current setpoint filter 6 (general filter).
Dependency: Current setpoint filter 6 is activated via p5200.1 and parameterized via p5207 ... p5210.

p5210[0...n]	Current setpoint filter 6 numerator damping / I_set_filt 6 D_num		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.000	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10.000	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 0.700

Description: Sets the numerator damping for current setpoint filter 6 (general filter).
Dependency: Current setpoint filter 6 is activated via p5200.1 and parameterized via p5207 ... p5210.

p5211[0...n]	Current setpoint filter 7 type / I_set_filt 7 type		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: Integer16 P-Group: Closed-loop control Not for motor type: REL Min 1	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 1

Description: Sets the current setpoint filter 7 as low pass (PT2) or general 2nd order filter.
Value: 1: PT2 low pass
2: General 2nd order filter
Dependency: Current setpoint filter 7 is activated via p5200.2 and parameterized via p5212 ... p5215.

Note: For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

$$f_{3dB} \text{ bandwidth} = 2 * D_{denominator} * f_{bandstop} \text{ frequency}$$

p5211	Current actual value filter 7 type / I_act_filt 7 type

Description:	Sets the numerator natural frequency for current setpoint filter 8 (general filter).		
Dependency:	Current setpoint filter 8 is activated via p5200.3 and parameterized via p5217 ... p5220.		

2 Parameters

2.2 List of parameters

p5220[0...n]	Current setpoint filter 8 numerator damping / I_set_filt 8 D_num		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.000	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10.000	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 0.700
Description:	Sets the numerator damping for current setpoint filter 8 (general filter).		
Dependency:	Current setpoint filter 8 is activated via p5200.3 and parameterized via p5217 ... p5220.		

p5221[0...n]	Current setpoint filter 9 type / I_set_filt 9 type		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: Integer16 P-Group: Closed-loop control Not for motor type: REL Min 1	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the current setpoint filter 9 as low pass (PT2) or general 2nd order filter.		
Value:	1: PT2 low pass 2: General 2nd order filter		
Dependency:	Current setpoint filter 9 is activated via p5200.4 and parameterized via p5222 ... p5225.		
Note:	For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed. The denominator damping can be determined from the equation for the 3 dB bandwidth: $f_{3dB \text{ bandwidth}} = 2 * D_{denominator} * f_{bandstop \text{ frequency}}$		

p5222[0...n]	Current setpoint filter 9 denominator natural frequency / I_set_filt9 fn_den		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.5 [Hz]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 16000.0 [Hz]	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 1999.0 [Hz]
Description:	Sets the denominator natural frequency for current setpoint filter 9 (PT2, general filter).		
Dependency:	Current setpoint filter 9 is activated via p5200.4 and parameterized via p5222 ... p5225.		

p5223[0...n]	Current setpoint filter 9 denominator damping / I_set_filt 9 D_den		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.001	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10.000	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 0.700
Description:	Sets the denominator damping for current setpoint filter 9 (PT2, general filter).		
Dependency:	Current setpoint filter 9 is activated via p5200.4 and parameterized via p5222 ... p5225.		

p5224[0...n]	Current setpoint filter 9 numerator natural frequency / I_set_filt9 fn_num		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.5 [Hz]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 16000.0 [Hz]	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 1999.0 [Hz]
Description:	Sets the numerator natural frequency for current setpoint filter 9 (general filter).		
Dependency:	Current setpoint filter 9 is activated via p5200.4 and parameterized via p5222 ... p5225.		

p5225[0...n]	Current setpoint filter 9 numerator damping / I_set_filt 9 D_num		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.000	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10.000	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 0.700
Description:	Sets the numerator damping for current setpoint filter 9 (general filter).		
Dependency:	Current setpoint filter 9 is activated via p5200.4 and parameterized via p5222 ... p5225.		

p5226[0...n]	Current setpoint filter 10 type / I_set_filt 10 type		
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: Integer16 P-Group: Closed-loop control Not for motor type: REL Min 1	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the current setpoint filter 10 as low pass (PT2) or general 2nd order filter.		
Value:	1: PT2 low pass 2: General 2nd order filter		
Dependency:	Current setpoint filter 10 is activated via p5200.5 and parameterized via p5227 ... p5230.		
Note:	For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed. The denominator damping can be determined from the equation for the 3 dB bandwidth: $f_{3dB} \text{ bandwidth} = 2 * D_{denominator} * f_{bandstop} \text{ frequency}$

SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.5 [Hz]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 16000.0 [Hz]	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 1999.0 [Hz]
Description:	Sets the denominator natural frequency for current setpoint filter 10 (PT2, general filter).		
Dependency:	Current setpoint filter 10 is activated via p5200.5 and parameterized via p5227 ... p5230.		

2 Parameters

2.2 List of parameters

p5228[0...n]	Current setpoint filter 10 denominator damping / I_set_filt10 D_den			
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.001	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10.000	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 0.700	
Description:	Sets the denominator damping for current setpoint filter 10 (PT2, general filter).			
Dependency:	Current setpoint filter 10 is activated via p5200.5 and parameterized via p5227 ... p5230.			
p5229[0...n]	Current setpoint filter 10 numerator natural frequency / I_set_filt 10 fn			
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.5 [Hz]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 16000.0 [Hz]	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 1999.0 [Hz]	
Description:	Sets the numerator natural frequency for current setpoint filter 10 (general filter).			
Dependency:	Current setpoint filter 10 is activated via p5200.5 and parameterized via p5227 ... p5230.			
p5230[0...n]	Current setpoint filter 10 numerator damping / I_set_filt10 D_num			
SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.000	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10.000	Access level: 3 Func. diagram: 5711 Unit selection: - Expert list: 1 Factory setting 0.700	
Description:	Sets the numerator damping for current setpoint filter 10 (general filter).			
Dependency:	Current setpoint filter 10 is activated via p5200.5 and parameterized via p5227 ... p5230.			
p5250[0...n]	Cogging torque compensation configuration / Cog_M_comp config			
SERVO (Cog_M_comp), SERVO_AC (Cog_M_comp), SERVO_I_AC (Cog_M_comp)	Can be changed: U, T Data type: Unsigned8 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin	
Description:	Sets the configuration of the cogging torque compensation.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Activate compensation	Yes	No
	01	Activating direction-dependent tables	Yes	No
Dependency:	Refer to: p5252, p5253, r5254, r5255, p5256, p5260, p5261			
Notice:	After replacing the encoder and/or motor, the torque table for the cogging torque compensation must be learned again.			
Note:	For bit 01: When the bit is set, a separate table is used for each direction of motion (p5260, p5261). Both directions must be learned. When the bit is not set, one table is used for both directions of motion (p5260). Learning is only required in one direction.			

p5251	Activate cogging torque compensation learning / Cog_M_comp_learn			
SERVO (Cog_M_comp), SERVO_AC (Cog_M_comp), SERVO_I_AC (Cog_M_comp)	Can be changed: U, T Data type: Unsigned8 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin	
Description:	Setting for activating/deactivating learning for cogging torque compensation.			
Bit field:	Bit	Signal name	1 signal	0 signal FP
	00	Reactivate slow learning	Yes	No -
	01	Activate slow learning as supplement	Yes	No -
	02	Remove average value	Yes	No -
Dependency:	Refer to: p5252, p5253, r5254, r5255, p5260			
Notice:	After replacing the encoder and/or motor, the torque table for the cogging torque compensation must be learned again.			
p5252	Cogging torque compensation table length / Cog_M_comp length			
SERVO (Cog_M_comp), SERVO_AC (Cog_M_comp), SERVO_I_AC (Cog_M_comp)	Can be changed: T Data type: Unsigned8 P-Group: Closed-loop control Not for motor type: - Min 6	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 12	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10	
Description:	Sets the table length in bits for cogging torque compensation. 10 corresponds to $2^{10} = 1024$ values.			
Dependency:	Refer to: p5250, p5253, r5254, r5255, p5260			
p5253	Cogging torque compensation periodicity factor / Cog_M_comp_period			
SERVO (Cog_M_comp), SERVO_AC (Cog_M_comp), SERVO_I_AC (Cog_M_comp)	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00000	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 32768.00000	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.00000	
Description:	Sets the factor for the periodicity for the cogging torque compensation. For rotating motors, the reference value is one mechanical revolution, for linear motors, the pole pair width.			
Dependency:	Refer to: p5250, p5252, r5254, r5255, p5260			
Note:	For values < 1, several table periods are passed through for each mechanical revolution or pole pair width, for values > 1 several revolutions or pole pair widths are required for one table period. The following must apply for endlessly rotating machines: $p0408$ and $p0408 * p5253 * 2^{p0418}$ must have a power of two less than 2^{24} .			
r5254[0...3]	Cogging torque compensation diagnostics / Cog_M_comp diag

Description:	Displays diagnostics data for the cogging torque compensation.			
Index:	[0] = Average values for slowly learning [1] = Actual table index			

2 Parameters

2.2 List of parameters

[2] = Table index when starting learning
 [3] = Table index when ending learning

Dependency: Refer to: p5250, p5252, p5253, r5255, p5260

Note: For index 0:
 Average values for slowly learning the cogging torque compensation. During learning, the average value is incremented by 1 for each table period passed.
 For index 1:
 Currently used table index.
 For index 2:
 Table index when starting slow learning.
 For index 3:
 Table index when ending slow learning.
 For index 2, 3:
 If the actual index when learning is decremented, then the table index at start and end is interchanged.

r5255[0...1] **CO: Cogging torque compensation input/output / Cog_M_comp I/O**

	Min	Max	Factory setting
	-1000000.000 [Nm]	1000000.000 [Nm]	0.000 [Nm]

Description: Display or setting of the compensation values for the negative direction of the cogging torque compensation.

Dependency: Refer to: p5250, p5251, p5252, p5253, r5254, r5255, p5256, p5260

Note: The table length used is set using p5252.
This setting is only active for p5250.1 = 1.

p5271[0...n] Online tuning configuration / Ot config

SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 1100 bin

Description: Sets the configuration for the online tuning.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	PD controller for large load moments of inertia	Yes	No	-
	01	Reduce gain at low speeds	Yes	No	-
	02	Load adaptation Kp	Yes	No	5045
	03	Speed precontrol	Yes	No	5045
	04	Torque pre-control	Yes	No	5045
	05	Set maximum acceleration limiting	Yes	No	5045
	06	Do not change Kp	Yes	No	-

Dependency: Refer to: p5272, p5273, r5274, p5275

Note: For bit 00:
For significant differences between the motor mass and load mass, or for low dynamic performance of the controller, then the P controller becomes a PD controller in the position control loop. As a consequence, the dynamic performance of the position controller is increased.
This function should only be set when the velocity precontrol (bit 3 = 1) or the force precontrol (bit 4 = 1) is active.

For bit 01:
At low velocities, the controller gain factors are automatically reduced in order to avoid noise and oscillation at standstill.

For bit 02:
The estimated load mass is taken into account for the velocity controller gain (see p5273).

For bit 03:
Activates the velocity precontrol for the basic positioner (EPOS).

For bit 04:
Activates the force precontrol for the basic positioner (EPOS).

For bit 05:
The maximum setpoint acceleration for the basic positioner (EPOS) is determined based on the estimated mass. This is only realized once by setting the bit.

Prerequisite:
The drive pulses are inhibited and the mass was previously determined.

For bit 06:
The velocity controller gain set in p1460 is not changed when calculating the controller data.

p5271[0...n]		Online tuning configuration / Ot config			
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: T	Calculated: -	Access level: 3

	02	Load adaptation Kp	Yes	No	5045
	06	Do not change Kp	Yes	No	-
Dependency:	Refer to: p5272, p5273, r5274, p5275				
Note:	For bit 02: The estimated load moment of inertia is taken into account for the speed controller gain (see p5273).				

2 Parameters

2.2 List of parameters

For bit 06:

The speed controller gain set in p1460 is not changed when calculating the controller data.

p5272[0...n]	Online tuning dynamic factor / Ot dyn_factor		
SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min 5.0 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.0 [%]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the dynamic factor for the proportional gain of the velocity controller for online tuning.		
Dependency:	Refer to: p5271, p5273, r5274, p5275		
Notice:	The velocity control can become unstable for excessively high values.		
Note:	The stiffer the mechanical load coupling, the higher the dynamic factor can be set.		
p5272[0...n]	Online tuning dynamic factor / Ot dyn_factor		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min 5.0 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.0 [%]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the dynamic factor for the proportional gain of the speed controller for online tuning.		
Dependency:	Refer to: p5271, p5273, r5274, p5275		
Notice:	The speed control can become unstable for excessively high values.		
Note:	The stiffer the mechanical load coupling, the higher the dynamic factor can be set.		
p5273[0...n]	Online tuning dynamic factor load / Ot dyn_factor load		
SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min 0.0 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.0 [%]	Access level: 3 Func. diagram: 5045 Unit selection: - Expert list: 1 Factory setting 30.0 [%]
Description:	Sets the dynamic factor for the proportional gain of the velocity controller for online tuning. The value specifies which component of the estimated load mass is taken into account when adapting the velocity controller.		
Dependency:	Refer to: p5271, p5272, r5274, p5275		
Notice:	The velocity control can become unstable for excessively high values.		
p5273[0...n]	Online tuning dynamic factor load / Ot dyn_factor load		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min 0.0 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.0 [%]	Access level: 3 Func. diagram: 5045 Unit selection: - Expert list: 1 Factory setting 30.0 [%]
Description:	Sets the dynamic factor for the proportional gain of the speed controller for online tuning. The value specifies which component of the estimated load moment of inertia is taken into account when adapting the speed controller.		
Dependency:	Refer to: p5271, p5272, r5274, p5275		
Notice:	The speed control can become unstable for excessively high values.		

r5274	CO: Online tuning dynamic estimated / Ot dyn estimate			
SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min - [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [ms]	Access level: 3 Func. diagram: 5045 Unit selection: - Expert list: 1 Factory setting - [ms]	
Description:	Display and connector output for the estimated dynamic response of the velocity control loop as PT1 time constant for online tuning.			
Dependency:	Refer to: p5271, p5272, p5273, p5275			
r5274	CO: Online tuning dynamic estimated / Ot dyn estimate			
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min - [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [ms]	Access level: 3 Func. diagram: 5045 Unit selection: - Expert list: 1 Factory setting - [ms]	
Description:	Display and connector output for the estimated dynamic response of the speed control loop as PT1 time constant for online tuning.			
Dependency:	Refer to: p5271, p5272, p5273, p5275			
p5275[0...n]	Online tuning dynamic time constant / Ot dyn T			
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min 0.0 [ms]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 60.0 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 7.5 [ms]	
Description:	Sets the time constant for the pre-control symmetrization for online tuning. As a consequence, the drive is allocated a defined, dynamic response via its pre-control. For axes, which must interpolate with one another, the same value must be entered. Examples: 0 ms = travel without following error (Kv factor is infinity) 5 ms = settling behavior as for PT1 with 5 ms (Kv factor = 12 [1000/min])			
Dependency:	Refer to: p5271, p5272, p5273, r5274			
Note:	This time constant is only effective if p5302.7 is set = 1. Otherwise, the pre-control symmetrization is adapted to the estimated dynamic response, therefore setting positioning without any overshoot.			
p5280[0...n]	Current setpoint filter adaptation configuration / Filt adapt config			
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: - Min -1	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0	
Description:	Sets the configuration for the adaptive current setpoint filter. The adaptation acts on the filter set using p5281.			
Value:	-1: Inactive and filter deactivated 0: Inactive 1: Active			

2 Parameters

2.2 List of parameters

Dependency:	The prerequisite for the adaptation of the current setpoint filter is that the "Moment of inertia estimator" function module is activated (r0108.10). Refer to: p5281, p5282, p5283, p5284, r5285
Notice:	If, when activating adaptation (p5280 = 1), the filter assigned via p5281 is still not active, then it is automatically activated.
Note:	If p5280 = -1: The adaptation is deactivated and the assigned filter deactivated. If p5280 = 0: The adaptation is inactive. The actual setting of the filter parameters is kept in a volatile memory. To permanently save the values that have been determined, the parameters must be saved in a non-volatile memory (p0977 = 1). If p5280 = 1: The adaptation is active. When a mechanical resonant frequency is excited, the filter frequency is adapted. Adaptation is temporarily inactive while the function generator generates a noise signal (p4820 = 4).

p5281[0...n]	Current setpoint filter adaptation assignment / Filt adapt assign		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: Unsigned16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0

Description: Sets the current setpoint filter that is to be adapted.
Value = 0: No assignment
Value = 1: Current setpoint filter 1 assigned (basic system)
...
Value = 4: Current setpoint filter 4 assigned (basic system)
Value = 5: Current setpoint filter 5 assigned (function module, r0108.21)
...
Value = 10: Current setpoint filter 10 assigned (function module, r0108.21)

Dependency:	Refer to: p5280, p5282, p5283, p5284, r5285 Refer to: F07419
Notice:	Fault F07419 is output if this setting is changed when adaptation is active.
Note:	If, when activating adaptation (p5280 = 1), the selected filter is still not active, then it is automatically activated.

p5282[0...n]	Current setpoint filter adaptation limit frequency lower / Filt adapt f lower		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 50 [Hz]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5000 [Hz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 250 [Hz]

Description: Sets the lower limit frequency for the current setpoint filter adaptation.
If the actual frequency of the adapted filter falls below the lower limit frequency, then the frequency of the adapted filter is set to the lower limit frequency. This limit is only effective when adaptation is active (p5280 = 1). If adaptation is not active, then this limit only becomes effective at the time of the next activation.

Dependency:	Refer to: p5280, p5281, p5283, p5284, r5285
Note:	If a value is entered which exceeds the upper limit frequency (p5283), then the value is rejected.

p5283[0...n]	Current setpoint filter adaptation limit frequency upper / Filt adapt f upper		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 200 [Hz]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000 [Hz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1500 [Hz]
Description:	Sets the upper limit frequency for the current setpoint filter adaptation. If the actual frequency of the adapted filter exceeds the upper limit frequency, then the frequency of the adapted filter is set to the upper limit frequency. This limit is only effective when adaptation is active (p5280 = 1). If adaptation is not active, then this limit only becomes effective at the time of the next activation. There is an internal maximum value for the upper limit frequency; this depends on the damping (attenuation) of the adapted filter and the current controller sampling time. If the parameterized value exceeds the internal maximum value, then the following applies: - this parameter is immediately limited to the internal maximum value if adaptation is active. - this parameter is limited to the internal maximum value the next time that adaptation is activated (p5280).		
Dependency:	Refer to: p5280, p5281, p5282, p5284, r5285		
Note:	If a value is entered which falls below the lower limit frequency (p5282), then the value is rejected.		
p5284[0...n]	Current setpoint filter adaptation activation threshold / Filt adapt thresh		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100 [%]
Description:	Sets the activation threshold for the current setpoint filter adaptation.		
Dependency:	Refer to: p5280, p5281, p5282, p5283, r5285		
Note:	The value should be increased if, in operation, the filter frequency continuously changes significantly although the resonance frequency does not change. The value should be reduced if the filter frequency adaptation cannot be set so that mechanical resonance is suppressed.		
r5285[0...n]	Current setpoint filter adaptation actual frequency / Filt adapt act f		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min - [Hz]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max - [Hz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Hz]
Description:	Displays the actual frequency of the adapted current setpoint filter.		
Dependency:	Refer to: p5280, p5281, p5282, p5283, p5284		
p5292	FFT tuning dynamic factor / FFT tun dyn_factor		
SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min 25.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 125.0 [%]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 80.0 [%]
Description:	Sets the dynamic factor for the proportional gain of the velocity controller for FFT tuning.		
Notice:	The velocity control can become unstable for excessively high values.		

2 Parameters

2.2 List of parameters

p5292	FFT tuning dynamic factor / FFT tun dyn_factor		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min 25.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 125.0 [%]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 80.0 [%]
Description:	Sets the dynamic factor for the proportional gain of the speed controller for FFT tuning.		
r5293	Velocity controller gain identified / FFT tun Kp ident		
SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [Ns/m]	Calculated: - Dyn. index: - Unit group: 24_2 Scaling: - Max - [Ns/m]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [Ns/m]
Description:	Displays the maximum possible Kp gain of the velocity controller iterated from the FFT measurement.		
r5293	FFT tuning speed controller P gain identified / FFT tun Kp ident		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [Nms/rad]	Calculated: - Dyn. index: - Unit group: 17_1 Scaling: - Max - [Nms/rad]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [Nms/rad]
Description:	Displays the determined proportional gain Kp of the speed controller before FFT tuning.		
r5294[0...5]	FFT tuning zero position identified / FFT tun zero ident		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [Hz]	Calculated: - Dyn. index: - Unit group: 2_1 Scaling: - Max - [Hz]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [Hz]
Description:	Displays the identified mechanical zero points.		
Note:	For r5294[0 .. 2]: Displays the zero positions for function p5301.4 = 1 "Load oscillation detection" or p5301.5 = 1 "Suppress detected load oscillation". For r5294[3 .. 5]: Displays the zero positions for function p5301.0 = 1 "Set proportional gain Kp" - or p5301.1 = 1 "Set current setpoint filter".		

r5295[0...5]	FFT tuning pole position identified / FFT tun pole ident		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [Hz]	Calculated: - Dyn. index: - Unit group: 2_1 Scaling: - Max - [Hz]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [Hz]
Description:	Displays the identified mechanical pole positions.		
Note:	For r5295[0 .. 2]: Displays the pole positions for function p5301.4 = 1 "Load oscillation detection" or p5301.5 = 1 "Suppress detected load oscillation". For r5295[3 .. 5]: Displays the pole positions for function p5301.0 = 1 "Set proportional gain Kp" - or p5301.1 = 1 "Set current setpoint filter".		
p5296[0...1]	FFT tuning PRBS amplitude / FFT tun PRBS ampl		
SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min 1.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 300.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 10.0 [%] [1] 30.0 [%]
Description:	Sets the amplitude of the PRBS signal. The value refers to the rated motor voltage (p0333) and to the motor standstill force (r0319).		
p5296[0...1]	FFT tuning PRBS amplitude / FFT tun PRBS ampl		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min 1.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 300.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 10.0 [%] [1] 30.0 [%]
Description:	Sets the amplitude of the PRBS signal. The value refers to the motor rated torque (r0333) and to the motor standstill torque (r0319).		
p5297[0...1]	FFT tuning PRBS offset / FFT tun PRBS offs		
SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min -210000.0000 [m/min]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 210000.0000 [m/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0000 [m/min]
Description:	Setting the motor velocity offset. The offset is intended to prevent non-linear effects, such as backlash or stiction from influencing the measured values		
Recommendation:	If the "Identify high frequencies" function (p5290 = 1) is used together with a TTL/HTL encoder, then the following applies to the offset velocity (p5297): p5297 > 15 / motor encoder pulse number / velocity controller sampling time p5297 = 15 / p0408 / p0115[2]		

2 Parameters

2.2 List of parameters

p5297[0...1]	FFT tuning PRBS offset / FFT tun PRBS offs		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min -210000.0000 [rpm]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 210000.0000 [rpm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0000 [rpm]
Description:	Sets the speed offset for the motor. The offset is intended to prevent non-linear effects, such as backlash or stiction from influencing the measured values		
Recommendation:	If the "Identify high frequencies" function (p5290 = 1) is used together with a TTL/HTL encoder, then the following applies to the offset speed (p5297): p5297 > 15 / motor encoder pulse number / speed controller sampling time p5297 = 15 / p0408 / p0115[2]		
r5298	FFT tuning amplitude response / FFT tun ampli_resp		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Amplitude response of the speed control loop dB (units - rpm/Nm or m/min/N). 1024 measured values are generated during the One Button Tuning function, and are then output in the speed controller clock cycle. For p5301.0 = 1 or p5301.1 = 1, in the representation, corresponds to a measured value = 1/(2048/p115[1]) in [Hz]. For p5301.4 = 1 or p5301.5 = 1, in the representation, corresponds to a measured value = 250Hz/2048 in [Hz]. A trigger condition is required to trace the measured values (e.g. amplitude response r5298 <> 0).		
r5299	FFT tuning phase response / FFT tun ph_resp		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Phase response of the speed control loop in degrees. 1024 measured values are generated during the One Button Tuning function, and are then output in the speed controller clock cycle. For p5301.0 = 1 or p5301.1 = 1, in the representation, corresponds to a measured value = 1/(2048/p115[1]) in [Hz]. For p5301.4 = 1 or p5301.5 = 1, in the representation, corresponds to a measured value = 250Hz/2048 in [Hz]. A trigger condition is required to trace the measured values (e.g. amplitude response r5298 <> 0).		
p5300[0...n]	Autotuning selection / Autotuning select		
SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: T Data type: Integer16 P-Group: - Not for motor type: REL Min -1	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 2	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets activation/deactivation of the "auto tuning" function. If p5300 = 1: The "One button tuning" function is configured using p5301.		

If p5300 = 2:

The "Online tuning" function is configured using p5302.

The following parameters are written to for the two functions:

p0430, p1160, p1400, p1413 - p1426, p1428, p1429, p1433 - p1435, p1441, p1460 - p1465, p1498, p1513, p1656 - p1676, p2533 - p2539, p2567, p2572, p2573, p5280

Value:
-1: Reset controller parameters
0: Inactive
1: One Button Tuning
2: Online tuning

Dependency: The prerequisite for the "auto tuning" function is that the "Moment of inertia estimator" function module is activated (r0108.10).

The "Autotuning" function can only be selected for "Servo" control mode with position encoder.

The motor must have already been commissioned so that autotuning functions error-free. A motor identification may be necessary beforehand (p1900 and following).

Refer to: p5301, p5302

Warning:

Only the motor measuring system is taken into account when optimizing the position controller. If an external measuring system is used for the position control, then this can result in an unstable controller setting.

The "One Button Tuning" function does not support different sampling times for current and velocity controllers. If p0112 = 2, in some instances different stability criteria are obtained. It is recommended that "One Button Tuning" is not used for this configuration.

Caution:

For some drive trains, the "online tuning" function can result in unstable settings (motor makes a whistling sound).

This is especially the case for large load masses that are connected to the motor through a low-frequency coupling/connection. In this case, parameter p5272 or p5273 must be reduced.

Note:

If p5300 = -1:

Autotuning is deactivated, and p5300 is automatically set to 0. In addition, the default setting values for the velocity and position controller are restored.

If p5300 = 0:

Online tuning is inactive.

To permanently save the values determined for the velocity controller and position controller, the parameters must be saved in a non-volatile manner (p0977 = 1 or "copy RAM to ROM").

The results of the moment of inertia estimator can be reset using p5300 = 0. After p5300 > 0, the parameters for moment of inertia and tuning must be determined again.

If p5300 = 1:

One Button Tuning is active.

The mass is determined once using a test signal. The controller parameters and current setpoint filters are additionally determined once using a noise signal as excitation source.

If p5300 = 2:

Online tuning is active.

The mass is estimated. The controller parameters are recalculated if there is a significant change to the mass.

p5300[0...n]

Autotuning selection / Autotuning select

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1	2	0

Description:

Sets activation/deactivation of the "auto tuning" function.

If p5300 = 1:

The "One button tuning" function is configured using p5301.

If p5300 = 2:

The "Online tuning" function is configured using p5302.

The following parameters are written to for the two functions:

p0430, p1160, p1400, p1413 - p1426, p1428, p1429, p1433 - p1435, p1441, p1460 - p1465, p1498, p1513, p1656 - p1676, p2533 - p2539, p2567, p2572, p2573, p5280

2 Parameters

2.2 List of parameters

Value:	-1: Reset controller parameters 0: Inactive 1: One Button Tuning 2: Online tuning
Recommendation:	If p5300 = 1 "One Button Tuning" is used together with an TTL/HTL encoder, then the following applies: Offset speed (p5297) > 15 / motor encoder pulse number / speed controller sampling time p5297 > 15 / p0408 / p0115[2]
Dependency:	The prerequisite for the "auto tuning" function is that the "Moment of inertia estimator" function module is activated (r0108.10). The "Autotuning" function can only be selected for "Servo" control mode with position encoder. The motor must have already been commissioned so that autotuning functions error-free. A motor identification may be necessary beforehand (p1900 and following). Refer to: p5301, p5302
Warning:	Only the motor measuring system is taken into account when optimizing the position controller. If an external measuring system is used for the position control, then this can result in an unstable controller setting. The "One Button Tuning" function does not support different sampling times for current and speed controllers. If p0112 = 2, in some instances different stability criteria are obtained. It is recommended that "One Button Tuning" is not used for this configuration.
	
Caution:	For some drive trains, the "online tuning" function can result in unstable settings (motor makes a whistling sound). This is especially the case for high load moments of inertia, which are coupled to the motor through a low-frequency connection/coupling. In this case, parameter p5272 or p5273 must be reduced.
	
Note:	If p5300 = -1: Autotuning is deactivated, and p5300 is automatically set to 0. In addition, the default setting values for the speed and position controller are restored. If p5300 = 0: Online tuning is inactive. To permanently save the values determined for the speed and position controllers, the parameters must be saved in a non-volatile manner (p0977 = 1 or "copy RAM to ROM"). If p5300 = 1: One Button Tuning is active. The moment of inertia is determined once using a test signal. The controller parameters and current setpoint filters are additionally determined once using a noise signal as excitation source. The steps to be executed can be configured using p5301. If p5300 = 2: Online tuning is active. The moment of inertia is estimated. The controller parameters are recalculated if the moment of inertia noticeably changes. The steps to be executed can be configured using p5302.

p5301[0...n]

One Button Tuning configuration / OBT config

SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0111 bin

Description: Setting the functions for One Button Tuning (p5300 = 1).
A test signal is required for some functions. Here, parameters p5307 to p5309 must be taken into consideration.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Setting the proportional gain Kp	Yes	No	-
	01	Setting current setpoint filter	Yes	No	-
	02	Activating the moment of inertia estimator	Yes	No	-
	04	Load oscillation detection	Yes	No	-
	05	Suppress detected load oscillation	Yes	No	-
	07	Activating synchronized axes	Yes	No	-

Dependency: It is only possible to change the configuration if autotuning is not active (p5300 = 0).
Refer to: p5300, p5307, p5308, p5309

Note:

For bit 00:
The velocity controller gain is determined and set using a noise signal.

For bit 01:
Possibly required current setpoint filters are determined and set using a noise signal.
As a consequence, a higher dynamic performance can be achieved in the velocity control loop.

For bit 02:
Using this bit, the mass is determined using a test signal. If this bit is not set, then the load mass must be manually set using parameter p1498. The test signal must have been previously set using parameters p5308 and p5309.

For bit 07:
With this function, these axes are adapted to the dynamic response set in p5275. This is necessary for interpolating axes. The time in p5275 should be set according to the axis with the lowest dynamic response.

p5301[0...n]	One Button Tuning configuration / OBT config		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0111 bin

Description: Setting the functions for One Button Tuning (p5300 = 1).
A test signal is required for some functions. Here, parameters p5307 to p5309 must be taken into consideration.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Setting the proportional gain Kp	Yes	No	-
	01	Setting current setpoint filter	Yes	No	-
	02	Activating the moment of inertia estimator	Yes	No	-
	04	Load oscillation detection	Yes	No	-
	05	Suppress detected load oscillation	Yes	No	-
	07	Activating synchronized axes	Yes	No	-

Dependency: It is only possible to change the configuration if autotuning is not active (p5300 = 0).
Refer to: p5300, p5307, p5308, p5309

Note:

For bit 00:
The speed controller gain is determined and set using a noise signal.

For bit 01:
Possibly required current setpoint filters are determined and set using a noise signal.
As a consequence, a higher dynamic performance can be achieved in the speed control loop.

For bit 02:
Using this bit, the moment of inertia is determined using a test signal. If this bit is not set, then the load moment of inertia must be manually set using parameter p1498. The test signal must have been previously set using parameters p5308 and p5309.

For bit 04:
Using this bit, load oscillation detection is determined using a test signal. The traversing distance must have been previously set using parameter p5308.

For bit 05:
Using this bit, load oscillation detection is determined using a test signal, and transferred to p3752. Precondition is function module "APC" (r108.7=1) and p3700.2 = 1. After executing the function, APC must be activated via p3700.0 = 1. The traversing distance must have been previously set using parameter p5308.

For bit 07:
With this function, these axes are adapted to the dynamic response set in p5275. This is necessary for interpolating axes. The time in p5275 should be set according to the axis with the lowest dynamic response.

p5302[0...n]	Online tuning configuration / Ot config			
SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: U, T Data type: Unsigned32 P-Group: - Not for motor type: REL Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 1100 bin	
Description:	Setting the functions for online tuning (p5300 = 2).			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Setting the proportional gain Kp	Yes	No
	01	Setting current setpoint filter	Yes	No
	02	Activating the moment of inertia estimator	Yes	No
	03	Configuring the moment of inertia estimator	Cyclic	Once
	06	Activating the current setpoint filter adaptation	Yes	No
	07	Activating synchronized axes	Yes	No
Dependency:	It is only possible to change the configuration if autotuning is not active (p5300 = 0). Refer to: p5300, p5307, p5308, p5309			
Caution:	Please note the general conditions for the moment of inertia estimator, online tuning as well as adaptive resonance filter in the following reference: SINAMICS S120 Function Manual Drive Functions			
				
Note:	For bit 02: When this bit is set, the mass is determined while traversing (moment of inertia estimator). If this bit is not set, then the load mass must be manually set using parameter p1498. For bit 03: If p5302.3 = 0, "Once" applies: After having successfully determined the load mass (p1498), the moment of inertia estimator is deactivated. If p5302.3 = 1, "Cyclic" applies: The mass is continually determined and the controller parameters adapted. After the mass has been successfully determined (r1407.26 = 1), we recommend that the parameters are saved in a non-volatile fashion. As a consequence, the controllers do not have to restabilize after the next switch on. For bit 06: The adaptation of a current setpoint filter can be set here (see p5280 - p5285). This adaptation may be necessary if a mechanical resonance frequency changes in operation. It can also be used to dampen a fixed resonance frequency. Once the control loop has stabilized, this bit should be deactivated and the determined parameters saved in a non-volatile fashion. For bit 07: When this function is activated these axes are adapted to the dynamic response set in p5275. This is necessary for interpolating axes. The time in p5275 should be set according to the axis with the lowest dynamic response.			

p5302[0...n]	Online tuning configuration / Ot config			
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: U, T Data type: Unsigned32 P-Group: - Not for motor type: REL Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 1100 bin	
Description:	Setting the functions for online tuning (p5300 = 2).			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Setting the proportional gain Kp	Yes	No
	01	Setting current setpoint filter	Yes	No
	02	Activating the moment of inertia estimator	Yes	No
	03	Configuring the moment of inertia estimator	Cyclic	Once
	06	Activating the current setpoint filter adaptation	Yes	No
	07	Activating synchronized axes	Yes	No

- Dependency:** It is only possible to change the configuration if autotuning is not active (p5300 = 0).
Refer to: p5300, p5307, p5308, p5309
- Caution:** Please note the general conditions for the moment of inertia estimator, online tuning as well as adaptive resonance filter in the following reference:
 SINAMICS S120 Function Manual Drive Functions
- Note:** For bit 02:
When this bit is set, the moment of inertia is determined while traversing (moment of inertia estimator). If this bit is not set, then the load moment of inertia must be manually set using parameter p1498.
For bit 03:
If p5302.3 = 0, "Once" applies:
After having successfully determined the moment of inertia (p1498), the moment of inertia estimator is deactivated.
If p5302.3 = 1, "Cyclic" applies:
The moment of inertia is continually determined and the control parameters adapted. After the moment of inertia has been successfully determined (r1407.26 = 1), we recommend that the parameters are saved in a non-volatile fashion. As a consequence, the controllers do not have to restabilize after the next switch on.
For bit 06:
The adaptation of a current setpoint filter can be set here (see p5280 - p5285).
This adaptation may be necessary if a mechanical resonance frequency changes in operation. It can also be used to dampen a fixed resonance frequency. Once the control loop has stabilized, this bit should be deactivated and the determined parameters saved in a non-volatile fashion.
For bit 07:
When this function is activated these axes are adapted to the dynamic response set in p5275. This is necessary for interpolating axes. The time in p5275 should be set according to the axis with the lowest dynamic response.

SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: T Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin	
Description:	Setting to activate the test signal. For bit 01: As setpoint velocity, the rated motor velocity is entered, alternating in the positive and negative directions.			
Bit field:	Bit	Signal name	1 signal	0 signal
	01	Triangular test signal	ON	OFF
Dependency:	Refer to: p5308, p5309			
Note:	For bit 01: This test signal can only be activated for p5308 > 0 and p5309 > 0. Speed control with encoder is required to activate the test signal.			

p5307[0...n]	Test signal activation / Test sig act			
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: T Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin	
Description:	Setting to activate the test signal. For bit 01: As setpoint speed, a triangular signal is entered, alternating in the positive and negative directions. Distance p5308 and duration p5309 are kept.			
Bit field:	Bit	Signal name	1 signal	0 signal
	01	Triangular test signal	ON	OFF
Dependency:	Refer to: p5308, p5309			

2 Parameters

2.2 List of parameters

Note: For bit 01:
This test signal can only be activated for p5308 > 0 and p5309 > 0.
Speed control with encoder is required to activate the test signal.

p5308[0...n]		Test signal traversing range limiting / Test sig trav rng		
SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [mm]	30000 [mm]	0 [mm]	
Description:	Sets the distance limiting for the "Square wave with a rated velocity" test signal (p5307.1). After activating the test signal (p5307.1), the traversing range is limited in the positive and negative directions to the set distance limit in mm.			
Dependency:	Refer to: p5307			
Note:	The position before the pulse enable is used as zero point.			

p5308[0...n]		Test signal traversing range limiting / Test sig trav rng		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [°]	30000 [°]	0 [°]	
Description:	Sets the distance limiting for the "Triangular test signal" (p5307.1). After activating the test signal (p5307.1), the traversing range is limited in the positive and negative directions to the set distance limit (p5308).			
Dependency:	Refer to: p5307			
Note:	A value of 360 degrees corresponds to one motor revolution. The position before the pulse enable is used as zero point.			

p5309[0...n]		Test signal duration / Test sig dur		
SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [ms]	5000 [ms]	2000 [ms]	
Description:	Sets the test signal sequence duration (several acceleration operations).			
Dependency:	Refer to: p5307			

p5310[0...n]		Moment of inertia precontrol configuration / J_est config			
VECTOR (J_estimator), VECTOR_AC (J_estimator), VECTOR_I_AC (J_estimator)	Can be changed: C2(3), U, T	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: Motor	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Configuration of the moment of inertia precontrol when the moment of inertia estimator is active.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Activating calculations	Yes	No	-
	01	Activating the moment of inertia precontrol	Yes	No	-

Dependency: The function module "Moment of inertia estimator" (r0108.10) must be activated for the "Moment of inertia precontrol" function.

Refer to: r5311, p5312, p5313, p5314, p5315

Note:

Possible bit combinations:

Bit 1, 0

= 0, 0 --> function not active

= 0, 1 --> cyclic calculation of the coefficients without moment of inertia precontrol (commissioning)

= 1, 0 --> moment of inertia precontrol activated (without cyclic calculation of the coefficients)

= 1, 1 --> moment of inertia precontrol activated (with cyclic calculation of the coefficients)

For bit 00:

Calculation for the constant and linear coefficients of the moment of inertia precontrol is activated. The results are written to parameters (p5312, p5313, p5314, p5315).

For bit 01:

The moment of inertia precontrol is activated.

The moment of inertia is calculated from the currently measured load torque and the saved coefficients (p5312, p5313, p5314, p5315).

r5311[0...n] Moment of inertia precontrol status word / J_prectrl ZSW

VECTOR (J_estimator), VECTOR_AC (J_estimator), VECTOR_I_AC (J_estimator)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status word for the moment of inertia precontrol.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	New measuring points are available	Yes	No	-
	01	New parameters being calculated	Yes	No	-
	02	Moment of inertia precontrol active	Yes	No	-
	03	Calculation of positive coefficients completed	Yes	No	-
	04	Calculation of negative coefficients completed	Yes	No	-
	05	Results are being written to parameter	Yes	No	-

Dependency: The function module "Moment of inertia estimator" (r0108.10) must be activated for the "Moment of inertia precontrol" function.

Refer to: p5310, p5312, p5313, p5314, p5315

p5312[0...n] Moment of inertia precontrol linear positive / J_est lin pos

VECTOR (J_estimator), VECTOR_AC (J_estimator), VECTOR_I_AC (J_estimator)	Can be changed: C2(3), U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-340.28235E36 [s ²]	340.28235E36 [s ²]	0.000000 [s ²]

Description: Setting of the linear coefficients for moment of inertia precontrol in the positive direction when the moment of inertia estimator is active.

The estimated moment of inertia is obtained according to the following formula:

Moment of inertia (J) = linear coefficient (p5312) * load torque + constant coefficient (p5313)

Dependency: The function module "Moment of inertia estimator" (r0108.10) must be activated for the "Moment of inertia precontrol" function.

Refer to: p5310, r5311, p5313, p5314, p5315

Description:	Sets the change time for the inertia for the inertia precontrol. Lower values mean that faster changes are possible. For a higher value, this estimated value is smoothed more significantly.		
Dependency:	Refer to: p1400, p1560, p1562		
p5316[0...n]	Moment of inertia precontrol change time moment of inertia / J_prectrl t J		
SERVO (J_estimator), VECTOR (J_estimator), SERVO_AC (J_estimator), VECTOR_AC (J_estimator), SERVO_I_AC (J_estimator), VECTOR_I_AC (J_estimator)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 10.00 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 500.00 [ms]
Description:	Sets the change time for the moment of inertia for the moment of inertia precontrol. Lower values mean that faster changes are possible. For a higher value, this estimated value is smoothed more significantly.		
Dependency:	Refer to: p1400, p1560, p1562		
p5350[0...n]	Mot_temp_mod 1/3 boost factor at standstill / Standst boost_fact		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(3), U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL Min 1.0000	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 2.0000	Access level: 2 Func. diagram: 8017 Unit selection: - Expert list: 1 Factory setting 2.0000
Description:	Sets the boost factor for the copper losses at standstill for motor temperature models 1 and 3. The entered factor is active for speed n = 0 [rpm]. This factor is linearly reduced down to 1 between speeds n = 0 ... 1 [rpm]. The following values are required to calculate the boost factor: - stall current (I_0, p0318, catalog value) - thermal stall current (I_th0, catalog value) The boost factor is calculated as follows: - $p5350 = (I_0 / I_{th0})^2$		
Dependency:	Refer to: p0318, p0351, p0612, p5390, p5391 Refer to: F07011, A07012, F07013, A07014		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	Temperature model 1 (I2t): The following applies for firmware version < 4.7 SP6 or p0612.8 = 0: - parameter p5350 is not active. Internally, a fixed boost factor of 1.333 is used as basis for the calculation. The following applies from firmware version 4.7 SP6 and p0612.8 = 1: - parameter p5350 becomes active as described above.

2.2 List of parameters

r5389.0...8		CO/BO: Mot_temp status word faults/alarms / Mot_temp ZSW F/A		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: Unsigned16 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 8016 Unit selection: - Expert list: 1 Factory setting -	
Description:	Display and BICO output for faults and alarms of the motor temperature monitoring.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Motor temperature measurement fault active	Yes	No
	01	Motor temperature model fault active	Yes	No
	02	Encoder temperature measurement fault active	Yes	No
	04	Motor temperature measurement alarm active	Yes	No
	05	Motor temperature measurement alarm active	Yes	No
	08	Current reduction active	Yes	No
Dependency:	Refer to: r0034, p0612, r0632 Refer to: F07011, A07012, A07910			
Note:	For bit 00, 04: The motor temperature is measured using a temperature sensor (p0600, p0601). When the bit is set, a high temperature is identified, and a corresponding signal is additionally output. For bit 01, 05: The motor temperature is monitored based on a temperature model (p0612). When the bit is set, a high temperature is identified, and a corresponding signal is additionally output. For bit 02: The encoder temperature is measured using a temperature sensor. When the bit is set, a high temperature is identified, and a corresponding signal is additionally output. For bit 08: When reaching the motor temperature alarm threshold, reduction of the maximum current is set as response (p0610 = 1). When the bit is set, reduction of the maximum current is active.			
p5390[0...n]		Mot_temp_mod 1/3 alarm threshold / A thresh		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(3), U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL Min 0.0 [°C]	Calculated: - Dyn. index: MDS, p0130 Unit group: 21_1 Scaling: - Max 200.0 [°C]	Access level: 2 Func. diagram: 8017 Unit selection: p0505 Expert list: 1 Factory setting 110.0 [°C]	
Description:	Sets the alarm threshold for monitoring the motor temperature for motor temperature models 1 and 3. The stator winding temperature (r0632) is used to initiate the signal. The following applies for temperature model 1 (I2t): - only effective from firmware version 4.7 SP6 and p0612.8 = 1. - Alarm A07012 is output after the alarm threshold is exceeded. - when commissioning a catalog motor for the first time, the threshold value is copied from p0605 to p5390. The following applies for temperature model 3: - after the alarm threshold is exceeded, alarm A07012 is output and a calculated delay time (t = p5371/p5381) is started. - if the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output.			
Dependency:	Refer to: r0034, p0605, p0612, r0632, p5391 Refer to: F07011, A07012, F07013, A07014			

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The hysteresis is 2 K.

p5391[0...n]	Mot_temp_mod 1/3 fault threshold / F thresh		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(3), U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8017

	- [°C]	- [°C]	- [°C]

Description: Displays the alarm threshold for monitoring the motor temperature for motor temperature model 3. This value is used to calculate the utilization display (p0034). The parameter value is an image of p5390.

Dependency: Refer to: p5390
Refer to: F07011, A07012, F07013, A07014

Note: Users cannot see and change parameter p5390 (only Siemens internal).

r5399[0...n]	Mot_temp_mod 3 fault threshold image p5391 / F thr image p5391		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: ASM, SESM, REL Min - [°C]	Calculated: - Dyn. index: MDS, p0130 Unit group: 21_1 Scaling: - Max - [°C]	Access level: 2 Func. diagram: 8019 Unit selection: p0505 Expert list: 1 Factory setting - [°C]
Description:	Sets the fault threshold for monitoring the motor temperature for motor temperature model 3. Fault F07011 is output after the fault threshold is exceeded. The parameter value is an image of p5391.		
Dependency:	Refer to: p5391 Refer to: F07011, A07012, F07013, A07014		
Note:	Users cannot see and change parameter p5391 (only Siemens internal).		
p5401[0...1]	BI: Line droop control activation / Line drp act		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting [0] 0 [1] 1
Description:	For index 0: Sets the signal source to activate line droop control for the infeed. BI: p5401[0] = 1 signal: Activation of line droop control and deactivation of closed-loop DC link voltage control/closed-loop current control. BI: p5401[0] = 0 signal: Activation of closed-loop DC link voltage control/closed-loop current control and deactivation of line droop control. For index 1: Setting the signal source to activate the line droop setpoints (p5405, p5406, p5415, p5416). BI: p5401[1] = 1 signal: Activates the setpoints. BI: p5401[1] = 0 signal: Deactivates the setpoints.		
Index:	[0] = Line regulation [1] = Droop setpoints		
Dependency:	Refer to: r5402		
Notice:	Line droop control can only be activated if the power units have a gating unit with current limitation control (r0192.19 = 1 or r0192.30 = 1). We urgently recommend at least one measure to dampen power oscillations (p5413, p5476) if, in an island grid, several generating sources are simultaneously active – and power is exchanged via the frequency droop (p5405).		
Note:	For index 0: So that closed-loop DC link voltage control is activated by the VECTOR drive object's technology controller (due to closed-loop DC link voltage control for the infeed being deactivated) the following BICO interconnection must be set: BI: p3513 (VECTOR) = r5402.0 (A_INF) For index 1: When the setpoints are deactivated, the smoothed actual values of these variables are used for the no-load values of frequency and voltage. As a consequence, the average power is controlled so that it approaches zero. However, when the line frequency or line voltage changes, brief peak powers can occur according to the current limits that have been set (r5479). As the power is controlled to zero, in island grids continuous operation is only possible with p5401[1] = 0 if the grid is supplied by other generating units. Otherwise, line frequency and line voltage decreases to the shutdown limits. However, brief exceptions with the appropriate low frequency and amplitude deviations are possible and make sense (e.g. for switchover transitions in hot standby applications).		

r5402.0...6		CO/BO: Line droop control status word / Line drp ZSW

Description:	Sets the signal source for the voltage to be regulated in alpha/beta coordinates.		
Index:	[0] = Alpha [1] = Beta		
Note:	The following BICO interconnections are recommended: - Droop control for current/voltage at the line filter: BI: p5404 = r3468 (BI: p5403 = r3467 must be set) - Droop control for current/voltage at the line transformer: BI: p5404 = r5488 or r5498 (BI: p5403 = r5497 must be set)		
p5405	Line droop control frequency droop no-load frequency / Line drp f_no-ld		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 30.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max 300.00 [%]	Access level: 3 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the no-load frequency (as a % of p0211) for the line droop control active power frequency droop. Droop formula (without smoothing): $r5410 = (p5405 + p5406 + p5407 \times r5411[0] / r0206) \times p0211$		
Dependency:	Refer to: p5409		
Caution:	We urgently recommended that at least one measure is activated to dampen power oscillations (p5413, p5476).		
			
Note:	The droop characteristic input variable is the active power r5411[0] at the selected connection point (p5403, p5404). The output frequency calculated using the above formula is filtered in accordance with the parameterized smoothing time (p5409). The smoothed output frequency is displayed in r5410.		
p5406[0...1]	CI: Line droop control frequency droop supplementary setpoint / L drp f_suppl_setp		
A_INF (Line droop ctrl, Line transf), R_INF (Line droop ctrl, Line transf)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting [0] 0 [1] 5582[0]
Description:	Sets the signal source for the frequency droop supplementary setpoint (as a % of p0211).		
Index:	[0] = Supplementary setpoint is smoothed [1] = Supplementary setpoint direct		
Dependency:	Refer to: p5405		
Notice:	For index 1: Setpoint steps without smoothing can result in significant equalization operations in the line supply and the overload of the inverter and the line components.		

Note: For index 0:
The setpoint signals are smoothed using a PT1 filter (p5409).
For index 1:
If the signals for the unsmoothed setpoints are precisely reset to 0 (e.g. for p5483[3] = 1), then by internally adapting the smoothed setpoint state, an undesirable step-like frequency change is avoided. The signal for the smoothed setpoint should be adapted using a corresponding frequency change, if the frequency is to be kept constant.

p5407	Line droop control frequency droop gradient / Line drp f grad		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 3

	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the additional gradient of the frequency characteristic.		

p5409	Line droop control frequency droop smoothing time / Line drp f t_sm		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7982
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	10000.00 [ms]	150.00 [ms]
Description:	Sets the smoothing time for the output frequency of the active power frequency droop (r5410).		
Dependency:	Refer to: p5405		
Note:	When the load changes, mechanical energy generation units induce a delayed change in frequency on account of their inertia. The converter tries to emulate this response with the assistance of the smoothing time. For the line to remain stable, all the energy generation units in a separate network have to respond in a similar manner during operation.		

r5410	CO: Line droop control frequency droop output / Line drp f outp		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: -	Calculated: -	Access level: 3

r5411[0...1]	CO: Line droop control frequency droop active power / Line drp f P_act		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7982
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	- [kW]	- [kW]	- [kW]
Description:	Displays the input active power of the active power frequency droop. The active power is calculated for the currents and voltages defined with connector inputs p5403 and p5404.		
Index:	[0] = Unsmoothed [1] = Smoothed		
Dependency:	Refer to: p5409		
Note:	For index 1: The value is smoothed using a PT1 filter (smoothing time: p0045).		

r5412	CO: Line droop control line angle / Line drp angle		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7982
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the actual line angle for line droop control. The value is calculated by integrating the output frequency of the active power frequency droop (r5410).		

p5413	Line droop control additional frequency droop gradient / Line droop add-f		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7982
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	10000.0 [%]	0.0 [%]
Description:	Sets the gradient for the additional, fast frequency droop. The reference quantity is the gradient for the regular frequency droop (p5407). The settings for the regular frequency droop (p5405 onwards) apply to the other droop parameters. As a result of the short smoothing time, the supplementary frequency droop acts similar to a D component – and therefore as damping factor for the closed-loop line control.		
Recommendation:	Typical setting values lie between 50 % and 100 %.		
Dependency:	Refer to: p5414, p5476		
Note:	For example, a strong frequency dip can be generated when the load is connected with the additional frequency droop, and this can be used to emulate the behavior of a diesel generator. The frequency is initially changed with the smoothing time p5414 in accordance with the additional droop, reaching the stationary end value in accordance with the time constant p5409 for the regular frequency droop. The additional droop is deactivated with p5413 = 0.		

p5414	Line droop control additional frequency droop smoothing time / Line droop add-t		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100.0 [%]	Access level: 3 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting 10.0 [%]
Description:	Sets the smoothing time for the additional, fast frequency droop. The reference quantity is the smoothing time for the regular frequency droop (p5409).		
Recommendation:	Typical setting values lie between 10 % and 20 %.		
Dependency:	Refer to: p5413		
Note:	The smoothing time for the additional, fast frequency droop is less than or equal to the time constant for the regular frequency droop.		
p5415	Line droop control voltage droop no-load voltage / Line drp U_no-ld		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 30.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max 300.00 [%]	Access level: 3 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the no-load voltage (as a % of p0210) for the reactive current voltage droop for line droop control. Droop formula (without smoothing): $p5420 = (p5415 + p5416 + p5417 * r5421[0] / r0207) * p0210$		
Dependency:	Refer to: p5419		
Note:	The droop characteristic input variable is the reactive power r5421[0] at the selected connection point (p5403, p5404). The output voltage calculated using the above formula is filtered in accordance with the parameterized smoothing time p5419. The smoothed output voltage is displayed in r5420.		
p5416[0...1]	CI: Line droop control voltage droop supplementary setpoint / L drp V_suppl_setp		
A_INF (Line droop ctrl, Line transf), R_INF (Line droop ctrl, Line transf)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting [0] 0 [1] 5582[1]
Description:	Sets the signal source for the voltage droop supplementary setpoint (as a % of p0210).		
Index:	[0] = Supplementary setpoint is smoothed [1] = Supplementary setpoint direct		
Dependency:	Refer to: p5415		
Notice:	For index 1: Setpoint steps without smoothing can result in significant equalization operations in the line supply and the overload of the inverter and the line components.		
Note:	For index 0: The setpoint signals are PT1-filtered with the time constant p5419. For index 1: If the signals for the unsmoothed setpoints are precisely reset to 0 (e.g. for p5483[3] = 1), then by internally adapting the smoothed setpoint state, an undesirable step-like voltage change is avoided. The signal for the smoothed setpoint should be adapted using a corresponding voltage change, if the output voltage is to be kept constant.

	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.000 [mH]	10.000 [mH]	0.000 [mH]
Description:	Sets an imaginary supplementary inductance for the infeed. The supplementary inductance supplements the effect of the voltage droop, in particular for transient operations.		
Dependency:	Refer to: p5424		
Warning:	Unsuitable supplementary inductance and smoothing time settings will make line droop control unstable.		
			
Note:	The supplementary inductance is deactivated with p5423 = 0. The converter's output voltage is calculated so that the converter behaves like a supplementary inductance and as such achieves an effect similar to a line reactor with higher/lower inductance. The supplementary inductance can be used for damping in the event of resonance phenomena on the line.		

2 Parameters

2.2 List of parameters

p5424	Line droop control supplementary inductance smoothing time / L drp L_suppl t_sm		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100.00 [ms]	Access level: 4 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Sets the smoothing time for the effect of the supplementary inductance (p5423).		
Dependency:	Refer to: p5423		
Note:	The supplementary inductance causes current change to be fed back to the converter's output voltage.		
p5425[0...1]	CI: Line droop control voltage control signal source / L drp U_ctrl s_sc		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max -	Access level: 3 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting [0] 3468[0] [1] 3468[1]
Description:	Sets the signal source for the voltage to be regulated at the connection point in alpha/beta coordinates.		
Index:	[0] = Alpha [1] = Beta		
Dependency:	Refer to: p5427		
Note:	The following BICO interconnections are recommended: - Compensation of the internal voltage drop for connection point at line filter: BI: p5425 = r3468 - Compensation of the internal voltage drop for connection point at line transformer: BI: p5425 = r5488 or r5498		
p5426	Line droop control voltage control P gain / Line drp U_ctrl Kp

Description:	Sets the proportional gain for the controller for voltage control at the connection point. The controller compensates internal voltage drops under load conditions and as such precisely converts the droop characteristic at the connection point (defined in p5425).		
Dependency:	Refer to: p5427		
Note:	The proportional component of the controller is deactivated with p5426 = 0.		
p5427	Line droop control voltage control integration time / Line drp U_ctrl Ti		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10000.0 [ms]	Access level: 3 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting 500.0 [ms]
Description:	Sets the integration time for the controller for voltage control at the connection point. The controller compensates internal voltage drops under load conditions and as such precisely converts the droop characteristic at the connection point (defined in p5425).		
Dependency:	Refer to: p5426		
Note:	The integral component of the controller is deactivated with p5427 = 0.		

p5428[0...3]	Line droop control voltage control short circuit / Line drp U_ctrl sh		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: -	Calculated: - Dyn. index: - Unit group: - Scaling: -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 20.00 [%] [1] 0.00 [%] [2] 90.00 [%] [3] 2.00 [%]
Description:	Sets the parameters for rapid pre-control of the output voltage in the event of a voltage dip. The values relate to the voltage setpoint from the voltage droop (r5420). The voltage output by the converter is formed from the product of the voltage setpoint and the adaptation factor, which is calculated in rapid pre-control.		
Index:	[0] = Adaptation factor lower limit [1] = Adaptation factor increment current limit [2] = Adaptation factor increment voltage difference [3] = Adaptation factor increment increase		
Dependency:	Refer to: r5452		
Note:	Rapid adaptation of the voltage setpoint to a reduced line voltage (e.g. in the event of a line short circuit) reduces the number of additional switching operations completed by the lower-level rapid current hysteresis controller. For index 0: Minimum value for the adaptation factor, must be complied with for the calculation of the reduced output voltage. The factory setting is appropriate if the inductance of the commutating reactor (p0223) has the value p3421 - p3424. Higher values for p5428[0] result in higher rms values of the currents in the case of a short circuit. However, current limiting also intervenes more – and more harmonics are generated. For excessively low values in p5428[0], the short-circuit displayed in r5479[1] is no longer reached. The function is deactivated with p5428[0] = 100 %. For index 1: When the current limit is reached, the adaptation factor is weighted with this factor in each sampling cycle. A value of 0 means that the adaptation factor will jump to the minimum value (p5428[0]) if the current limit is reached. The function is deactivated for a value of 100%. For index 2: If the voltage across the line reactor exceeds the minimum value (p5428[0]) for at least 2 current controller sampling times, the adaptation factor will be weighted with this factor (p5428[2]) in every sampling cycle. For index 3: If none of the above criteria for reducing the adaptation factor is met, the adaptation factor is increased by the percentage value p5428[3] in each current controller sampling time (the increase is additive). If the adaptation factor reaches the maximum value of 100%, the effect of precontrol by means of multiplication by the droop setpoint r5420 is cancelled out.		
r5429	CO: Line droop control voltage control output / L drp U_ctrl outp		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: -	Calculated: - Dyn. index: - Unit group: - Scaling: p2001	Access level: 3 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting - [Vrms]
Description:	Displays the controller output for voltage control at the connection point.		
Dependency:	Refer to: p5426, p5427		

2 Parameters

2.2 List of parameters

p5430[0...1]	Modulation depth controller setting / ModDpth_ctrl set		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 50.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 110.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 94.0 [%] [1] 110.0 [%]
Description:	For index 0: Sets the setpoint for the maximum stationary modulation depth. For index 1: Sets the maximum modulation depth. With p5430[1] = 110 %, the modulation depth limiting is deactivated.		
Index:	[0] = setpoint [1] = Maximum value		

p5431	Modulation depth controller dynamic response / Mod_ctrl dyn		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10000.0 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.0 [ms]
Description:	Sets the dynamic response for the modulation depth controller.		
Note:	The modulation depth controller is deactivated with p5431 < p0115[0].		

p5432[0...1]	Modulation depth controller output voltage limits / Mod_ctrl lim U		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -200.0 [V]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 200.0 [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 100.0 [V] [1] -100.0 [V]
Description:	Sets the limits for the output voltage on the modulation depth controller.		
Index:	[0] = Maximum value [1] = Minimum value		

r5433	CO: Modulation depth controller output / Mod_ctrl outp		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [V]	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [V]
Description:	Display and connector output for the modulation depth controller output.		

p5434	Direct component controller low pass limit frequency / I_dc_reg PT2 f		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min 0.000 [Hz]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1.000 [Hz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.500 [Hz]
Description:	Sets the limit frequency for the 2nd order low-pass filter to suppress the direct component in the converter current.		
Dependency:	Refer to: p5435		
p5435	Direct component controller low pass damping / I_dc_reg PT2 D		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min 0.001	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10.000	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.000
Description:	Sets the damping for the 2nd order low-pass filter to suppress the direct component in the converter current.		
Dependency:	Refer to: p5434		
p5436	Direct component controller P gain / I_dc_reg Kp		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min 0.0000 [ohm]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10.0000 [ohm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0200 [ohm]
Description:	Sets the proportional gain for the PI controller to suppress the direct component in the converter current.		
Dependency:	Refer to: p5437		
Note:	Recommended setting: p5436 = total resistance of reactor and transformer. The parameter is preset when selecting the power unit (p201). In so doing, as approximation, a transformer with the same rating and a total power loss of 1.5 % is assumed: $p5436 = 1.5 \% * r0206[0] / (3 * r0207[0] * r0207[0])$		
p5437	Direct component controller integration time / I_dc_reg Ti		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100.000 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 3.500 [s]
Description:	Sets the integration time for the PI controller to suppress the direct component in the converter current.		
Dependency:	Refer to: p5436		
Note:	The parameter is preset when selecting the power unit (p201): p5437 = p5492 / p5436		

2 Parameters

2.2 List of parameters

p5438	Direct component controller limiting / I_dc_ctrl limit			
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.0 [%]	10.0 [%]	2.0 [%]	
Description:	Sets the controller output voltage limiting for the direct component controller. This value is entered as a percentage of the rated voltage (p0210).			
p5440	Harmonics controller bandpass filter activation / Bandpass act			
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Setting to activate the bandpass filter for the harmonics controller.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Filter 0	ON	OFF
	01	Filter 1	ON	OFF
	02	Filter 2	ON	OFF
	03	Filter 3	ON	OFF
				FP
				-
				-
				-
				-
Dependency:	Refer to: p5441, p5442, p5443			
p5441[0...3]	Harmonics controller bandpass filter gain / Bandpass gain			
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00	10000.00	120.00	
Description:	Sets the gain for the bandpass filter for the harmonics controller.			
Index:	[0] = Filter 0 [1] = Filter 1 [2] = Filter 2 [3] = Filter 3			
Dependency:	Refer to: p5440, p5442			
p5442[0...3]	Harmonics controller bandpass filter mid-frequency / Bandpass f_mid			
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [Hz]	1000.00 [Hz]	300.00 [Hz]	
Description:	Sets the mid-frequency for the bandpass filter for the harmonics controller.			
Index:	[0] = Filter 0 [1] = Filter 1 [2] = Filter 2 [3] = Filter 3			
Dependency:	Refer to: p5440, p5441, p5443			
Note:	The parameter should be set to a value which is greater than or equal to the fundamental frequency.			

p5443	Harmonics controller bandpass filter gain total / Bandpass gain tot		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	1.00
Description:	Sets the total gain for all bandpass filters for the harmonics controller.		
Dependency:	Refer to: p5440, p5441, p5442		
r5444[0...1]	CO: Line droop control line voltage absolute value / U_line abs val		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the absolute value of the line voltage. $r5444 = \sqrt{r5445[0]^2 + r5445[1]^2}$		
Index:	[0] = Droop (p5404) [1] = Voltage correction (p5425)		
Dependency:	Refer to: r5445		
r5445[0...11]	Line droop control voltage alpha/beta component / U A/B comp		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the alpha/beta component of the voltages.		
Index:	[0] = Line voltage alpha [1] = Line voltage beta [2] = Converter output voltage alpha [3] = Converter output voltage beta [4] = Line droop output voltage alpha [5] = Line droop output voltage beta [6] = DC controller output voltage alpha [7] = DC controller output voltage beta [8] = Harmonic controller voltage alpha [9] = Harmonic controller voltage beta [10] = Additional inductance voltage alpha [11] = Additional inductance voltage beta		
Dependency:	Refer to: r5444		

r5446[0...1]	CO: Line droop control line voltage active/reactive component / U_line P/Q comp		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [V]	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [V]
Description:	Displays the active/reactive component of the line voltage.		
Index:	[0] = Active [1] = Reactive		
r5447	CO: Line droop control line voltage absolute value / I_line abs val		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays the line current absolute value at the connection point (p5403, p5404).		
Dependency:	Refer to: r5448		
Note:	The following applies: $r5447 = \sqrt{r5448[0]^2 + r5448[1]^2}$		
r5448[0...3]	Line droop control line current alpha/beta component / I_line A/B comp		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [A]	Access level: 3 Func. diagram: 7982, 7983 Unit selection: - Expert list: 1 Factory setting - [A]
Description:	Displays the alpha/beta components of the current.		
Index:	[0] = Alpha [1] = Beta [2] = Alpha [3] = Beta		
Dependency:	Refer to: r5447		
Note:	For index 0, 1: Displays the line current. For index 2, 3: Displays the DC component of the power unit current for the DC component controller.		
r5449[0...1]	CO: Line droop control line current active/reactive component / I_line P/Q comp		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: - Unit group: - Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [A]
Description:	Displays the active/reactive component of the line current.		
Index:	[0] = Active [1] = Reactive		

r5450[0...5]	CO: Line droop setpoint active / Line drp setp act				
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: -	Calculated: -	Access level: 3		
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: PERCENT	Expert list: 1		
	Min	Max	Factory setting		
	- [%]	- [%]	- [%]		
Description:	Display and connector output for the effective setpoints of the line droop.				
Index:	[0] = Voltage droop no-load operation [1] = Voltage droop gradient [2] = Frequency droop no-load operation [3] = Frequency droop gradient [4] = Voltage supplementary setpoint direct [5] = Frequency supplementary setpoint direct				
p5451	BI: Current hysteresis controller operating mode / I_hyst_ctrl mode				
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -		
	P-Group: Commands	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0		
Description:	Sets the signal source for setting the operating mode on the current hysteresis controller. BI: p5451 = 1 signal: Combined operation (main generator and auxiliary generator on the line). BI: p5451 = 0 signal: Isolated operation (main generator only on the line).				
r5452.0...3	CO/BO: Current hysteresis controller sequence control status word / I_hyst_ctrl seqZSW				
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the sequence control status word on the current hysteresis controller.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Initialization	Yes	No	-
	01	No load	Yes	No	-
	02	Normal	Yes	No	-
	03	Short circuit	Yes	No	-
Dependency:	Refer to: p5457, p5458, p5459 Refer to: F06850				

p5453[0...5]		Current hysteresis controller overcurrent limit / I_hyst_ctrl I lim		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	45.0 [%]	130.0 [%]	[0...4] 85.0 [%] [5] 115.0 [%]	
Description:	Sets the permissible maximum current in the event of an overload and short circuit for the modulator to intervene and apply limiting. The effective current limits are calculated from the parameterized overcurrent (p5453) and the hysteresis width (p5454).			
Index:	[0] = No-load operation (p5451 = 1 signal) [1] = Normal operation (p5451 = 1 signal) [2] = Short-circuit operation (p5451 = 1 signal) [3] = No-load operation (p5451 = 0 signal) [4] = Normal operation (p5451 = 0 signal) [5] = Short-circuit operation (p5451 = 0 signal)			
Dependency:	The overcurrent limit (p5453) cannot be set less than or equal to the hysteresis width (p5454). Refer to: p5454, p5455			
Notice:	For devices with r0192.19 = 0 (e.g. Active Line Module Booksize), the maximum current limit can be set to p5453[5] = 105 %.			
Note:	The value is referred to the internal reference current.			

p5454[0...5]		Current hysteresis controller overcurrent hysteresis width / I_hyst_ctrl I hyst		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	15.0 [%]	50.0 [%]	20.0 [%]	
Description:	Sets the permissible current hysteresis in the event of an overload and short circuit for the modulator to intervene and apply limiting. The effective current limits are calculated from the parameterized overcurrent (p5453) and the hysteresis width (p5454).			
Index:	[0] = No-load operation (p5451 = 1 signal) [1] = Normal operation (p5451 = 1 signal) [2] = Short-circuit operation (p5451 = 1 signal) [3] = No-load operation (p5451 = 0 signal) [4] = Normal operation (p5451 = 0 signal) [5] = Short-circuit operation (p5451 = 0 signal)			
Dependency:	The hysteresis width (p5454) cannot be set greater than or equal to the overcurrent limit (p5453). Refer to: p5453			
Note:	The value is referred to the internal reference current.			

p5455[0...5]		Current hysteresis controller overcurrent tolerance range / I_hyst_ctrl I tol		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	10.0 [%]	100.0 [%]	20.0 [%]	
Description:	Sets the permissible tolerance range in the event of an overload and short circuit for the modulator to intervene and apply limiting. The effective current limit is calculated from the overcurrent limit (p5453) plus the overcurrent tolerance range (p5455).			
Index:	[0] = No-load operation (p5451 = 1 signal) [1] = Normal operation (p5451 = 1 signal) [2] = Short-circuit operation (p5451 = 1 signal) [3] = No-load operation (p5451 = 0 signal) [4] = Normal operation (p5451 = 0 signal) [5] = Short-circuit operation (p5451 = 0 signal)			
Dependency:	Refer to: p5453			
Note:	The value is referred to the internal reference current.			

p5456[0...2]		Current hysteresis controller configuration / I_hyst_ctrl config			
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 4		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Modulation	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	[0] 1000 0000 0010 0000 bin [1] 1000 0000 0010 0000 bin [2] 1000 0000 0011 0000 bin		
Description:	Sets the configuration for the current hysteresis controller.				
Index:	[0] = No load [1] = Normal operation [2] = Short-circuit operation				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	04	Disable wobulation amplitude	Yes	No	-
	05	Activate extended current limitation control	Yes	No	-
	06	Activate isochronous current limitation	Yes	No	-
	10	Activate pulse-locking/pulse-dropping function	Pulse-Dropping	Pulse-Locking	-
	15	Activate flat-top modulation	Yes	No	-
Note:	For bit 04 = 0: The pulse frequency wobulation amplitude (p1811) is enabled. Only applies if p1810.2 = 1. For bit 04 = 1: The pulse frequency wobulation amplitude (p1811) is disabled. Only applies if p1810.2 = 1. For bit 10: The setting according to p1810.10 applies.				

p5457[0...2]	Current hysteresis controller pulse frequency changeover / I_hyst_ctrl f_puls		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 50.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 200.0 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the pulse frequency for the operating states of the current hysteresis controller.		
Index:	[0] = No load [1] = Normal operation [2] = Short-circuit operation		
Note:	The value refers to p1800. Only factors of the pulse frequency in p1800 are permitted.		
p5458[0...1]	Current hysteresis controller minimum time operating state / I_hyst_ctrl t mode		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3.000 [s]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 1.000 [s] [1] 1.000 [s]
Description:	Sets the minimum times for the operating states of the current hysteresis controller.		
Index:	[0] = Normal operation [1] = Short-circuit operation		
Dependency:	Refer to: F06850		
Note:	For p5458[0]: Minimum time for operating state "Rated operation" for change to "No-load operation". For p5458[1]: Permissible short-circuit duration. If the short circuit is not cleared within this time, the main generator will shut down with fault F06850.		
p5459[0...3]	Current hysteresis controller sequence control state change / I_hyst_ctrl seq		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min 0.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 200.0 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 10.0 [%] [1] 5.0 [%] [2] 70.0 [%] [3] 75.0 [%]
Description:	Sets the limits for state change in the sequence control on the current hysteresis controller.		
Index:	[0] = Lower current limit no-load/normal operation [1] = Upper current limit normal/no-load operation [2] = Lower voltage limit short-circuit operation [3] = Upper voltage limit short-circuit/normal operation		
Dependency:	Refer to: r5452		
Note:	The current value refers to r0209. The voltage value refers to p0210.		

p5460[0...n]	VSM2 input line supply voltage, voltage scaler / VSM2 inp U_scaler				
A_INF (Line transf), R_INF (Line transf)	Can be changed: T	Calculated: -	Access level: 3		
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: -		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: PERCENT	Expert list: 1		
	Min	Max	Factory setting		
	0.00 [%]	100000.00 [%]	0.00 [%]		
Description:	Sets a voltage scaler for Voltage Sensing Module 2 (VSM2).				
Note:	When the 690 V input is used (X522) without voltage scaler, 0 % should be entered. When the 100 V input (X521) is used with voltage scaler to measure medium voltages, the dividing (scaling) factor multiplied by 100% should be entered. Example: 1000 V line supply voltage, voltage scaling, 10:1 --> voltage at the VSM input is 100 V --> p5460 = 10 * 100 % = 1000 %				
r5461[0...n]	CO: VSM2 input line supply voltage u1 - u2 / VSM2 inp u1-u2				
A_INF (Line transf), R_INF (Line transf)	Can be changed: -	Calculated: -	Access level: 3

Dependency:	Refer to: p5470		
Note:	The CT for phase 2 is connected at terminals X520.3 and X520.4 of VSM2.		

2 Parameters

2.2 List of parameters

r5473[0...n]	CO: VSM2 10 V input 1 actual value / VSM2 inp 1 U_act		
A_INF (Line transf), R_INF (Line transf)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [V]	Calculated: - Dyn. index: p0150 Unit group: - Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [V]
Description:	Displays the actual value of the voltage measured at the 10 V input 1 of Voltage Sensing Modules 2 (VSM2).		
Dependency:	Refer to: p5470		
Note:	10 V input 1: Terminals X520.1 and X520.2		
<hr/>			
r5474[0...n]	CO: VSM2 10 V input 2 actual value / VSM2 inp 2 U_act		
A_INF (Line transf), R_INF (Line transf)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [V]	Calculated: - Dyn. index: p0150 Unit group: - Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [V]
Description:	Displays the actual value of the voltage measured at the 10 V input 2 of Voltage Sensing Modules 2 (VSM2).		
Dependency:	Refer to: p5470		
Note:	10 V input 2: Terminals X520.3 and X520.4		
<hr/>			
p5476	Line droop control damping gain / Line droop damp k		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000.0 [%]	Access level: 4 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting 0.0 [%]
Description:	Sets the gain for the DT1 element of the frequency droop. In addition or alternatively to fast droop (p5413, p5414), with this D component power oscillations in the island line can be dampened. The reference quantity is the gain of the regular frequency droop (p5407).		
Recommendation:	Typical setting values lie between 50 % and 100 %.		
Dependency:	Refer to: p5477		
Note:	With p5476 = 100 %, a frequency change from the power-frequency droop, unscaled for the integration of the line angle becomes effective. With p5476 = 0, damping of the line control via the DT1 element is deactivated.		
<hr/>			
p5477	Line droop control damping smoothing time / Line droop damp T		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 5.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2000.0 [%]	Access level: 4 Func. diagram: 7982 Unit selection: - Expert list: 1 Factory setting 200.0 [%]
Description:	Sets the smoothing time for the DT1 element of the frequency droop. The reference quantity is the smoothing time for the regular frequency droop (p5409).		
Recommendation:	Typical setting values lie between 100 % and 200 %.		
Dependency:	Refer to: p5476		
Note:	With a lower smoothing time, the corner frequency of the high pass filter formed by the DT1 element increases. To dampen resonance in the line, the corner frequency must lie below the resonant frequency, and the setting value for the smoothing time must be selected to be correspondingly high.		

p5478[0...1]	Line droop control current limits / Line droop I_lim		
A_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 3

	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.0 [%]	123.0 [%]	[0] 90.0 [%] [1] 123.0 [%]
Description:	Setting for the permissible maximum current in the event of an overload and short circuit with active line droop control (p5401[0] = 1 signal).		
Index:	[0] = Normal operation [1] = Short-circuit operation		
Notice:	For devices with r0192.19 = 0 (e.g. Active Line Module Booksize), the maximum short-circuit current limit can be set to p5478[1] = 100 %.		
Note:	The value is referred to r5479[5]. The current limits p5453, p5454 and p5455 for the gating unit are automatically set. In the case of p5478[0] = 50 % and p5478[1] = 50 %, the current limits can be set manually (p5453, p5454, p5455). The current limits resulting from the setting values are displayed in r5479[0, 1]. For index 0: Current limit for normal operation and for line short circuit in combined operation with a generator. Maximum value is 100 %. For index 1: Current limit for short circuit with a main generator in isolated operation in the line.		

p5478[0...1]	Line droop control current limits / Line droop I_lim		
R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.0 [%]	123.0 [%]	[0] 67.0 [%] [1] 67.0 [%]
Description:	Setting for the permissible maximum current in the event of an overload and short circuit with active line droop control (p5401[0] = 1 signal).		
Index:	[0] = Normal operation [1] = Short-circuit operation		
Notice:	For devices with r0192.19 = 0 (e.g. Active Line Module Booksize), the maximum short-circuit current limit can be set to p5478[1] = 100 %. The value range is restricted as follows without license option S02: 51 % <= p5478[0, 1] <= 67 %		
Note:	The value is referred to r5479[5]. The current limits p5453, p5454 and p5455 for the gating unit are automatically set. In the case of p5478[0] = 50 % and p5478[1] = 50 %, the current limits can be set manually (p5453, p5454, p5455). The current limits resulting from the setting values are displayed in r5479[0, 1]. For index 0: Current limit for normal operation and for line short circuit in combined operation with a generator. Maximum value is 100 %. For index 1: Current limit for short circuit with a main generator in isolated operation in the line.		

2 Parameters

2.2 List of parameters

r5479[0...5]	Line droop control current permissible / Line droop I perm		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [Arms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Displays the permissible converter line current with active line droop control (p5401[0] = 1 signal).		
Index:	[0] = Overload current limiting [1] = Short-circuit current limiting [2] = Continuous current permissible at an ambient 40 °C [3] = Continuous current permissible at an ambient 45 °C [4] = Continuous current permissible at an ambient 50 °C [5] = Reference current		
Note:	For index 0: Permissible overload current and permissible current during a line short circuit in combined operation (p5451). The converter current is limited to this current value. For index 1: Permissible current during a line short circuit in isolated operation (p5451). The converter current is limited to this current value. For index 2, 3, 4: Continuously permissible line current at cos phi = 1 for I2t monitoring. The I2t numerator (r0036) is incremented above this current value with active line droop control (r5402.1 = 1). The current limit is dependent on the ambient temperature. Derating should be observed for cos phi < 1 in order to avoid overtemperatures. For index 5: Reference value for setting the current limits with p5478[0, 1]. The value lies above the maximum current (r0209) of the power unit.		
<hr/>			
p5480	Transformer magnetization mode / Transf mag mode		
A_INF (Line transf), R_INF (Line transf)	Can be changed: T Data type: Integer16 P-Group: Commands Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 102	Access level: 3 Func. diagram: 7990 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the mode for the transformer magnetization. Using this function, a transformer is magnetized using a voltage that is in synchronism with the external line supply; this means that no inrush currents flow when this transformer is connected to the line supply. If value = 11: Automatic determination of the magnetizing inductance. The magnetizing inductance determined in r5491 must be transferred to p5492 in order to take effect. Observe notes regarding r5491. If value = 12: Automatic determination of the transformer phase shift and the gain correction. The transformer phase shift determined in r6440 must be transferred to p6420 in order to take effect. The gain correction determined in r6441 must be transferred to p6421 in order to take effect. If value = 13: Determination of the total leakage inductance of the transformer during line data identification. p3410 = 1 is set automatically and the inductance is measured on the next switch-on. Once the measurement has been completed the converter shuts down automatically and p3410 is set = 0 and p5480 is set = 1. The total leakage inductance of the transformer determined in r5489 must be transferred to p5490 in order to take effect.		

If value = 101:

The infeed goes into line droop control, however the main switch/circuit breaker is not closed, and the transformer magnetization remains in the state r5482 = 4.

Test operation requires the "Line droop control" function module to be activated (r0108.12 = 1).

If value = 102:

As for test operation 1.

However, synchronization with the line is not realized (VSM2 measured data r5460 and following is not used); instead, the output voltage is generated corresponding to the rated data p0210, p0211, p5486.

Value:	0: Deactivated
	1: Normal operation
	11: Identification transformer magnetizing inductance
	12: Identification transformer phase shift/gain correction
	13: Identification total transformer leakage inductance
	101: Test operation 1 (without activation of circuit breaker)
	102: Test oper. 2 (w/o activation of circuit breaker, without VSM2)

Dependency: Refer to: r5482, p5486, r5493, p5494, r5499, p5580

Notice: The feedback signal contact of the circuit breaker between the Active Interface Module and the island grid must be connected in parallel via binector input p0860.

For an active black start (p5580 > 0), a separate transformer magnetization is not performed.

Note: The transformer magnetizing function is used in order to magnetize a line transformer to which the Active Line Module (ALM) is connected.

The precondition is that the transformer can be isolated from the line supply on the primary side using a circuit breaker and that the DC link of the ALM is supplied from a separate power source before the circuit breaker is closed (e.g. with a separate precharging transformer or for photovoltaic applications).

The circuit breaker between the Active Interface Module and the island grid is controlled via binector output r0863.1

The status of the transformer magnetization, black start and island grid synchronization is displayed in r5499.

The status of the sequence control for transformer magnetization, black start and island grid synchronization is displayed in r5482.

If value = 13:

For weak line supplies, it is recommended to reduce the excitation current p3415 for identifying the inductance (e.g. p3415[0] = p3415[1] = 5 %).

p5481[0...2]

Transformer magnetization times / Transf mag t

	0.04 [s]	100.00 [s]	[0] 2.00 [s] [1] 1.00 [s] [2] 1.00 [s]

Description: Sets the time values for the transformer magnetization.

Index:
[0] = Voltage ramp ramp-up time
[1] = Circuit breaker bounce time
[2] = Line synchronization timeout

Note: For index 0:

Sets the ramp duration for the transformer voltage.

For index 1:

Sets the bounce time for the circuit breaker at the line side of the line transformer.

An interruption-free connection between the line supply and the transformer is only guaranteed after the bounce time has expired.

The feedback signal contact of the circuit breaker between the Active Interface Module and the island grid must be connected in parallel via binector input p0860.

The wait state until the debounce time has expired is canceled if the following conditions are fulfilled:

- feedback signal p0860 = 1.
- current rise or DC link voltage change identified.

2 Parameters

2.2 List of parameters

For index 2:

Sets the permissible maximum time.

If the maximum time elapses without the line being synchronized, alarm A06502 is output.

The minimum duration of line synchronization is 25 % of this maximum time, however, as a minimum 40 ms.

Description:	Sets the primary rated voltage of the transformer.		
Index:	[0] = Supply transformer [1] = Island grid transformer		
Note:	For index 0: Setting the rated primary voltage of the line transformer, at whose secondary the AIM and the ALM are connected. If there is a circuit breaker at the transformer primary side, then the transformer can be magnetized before closing this circuit breaker in order to avoid high inrush currents. The setting of this primary voltage and setting the device supply voltage (p0210) defines the transformer ratio. To magnetize the transformer, the voltage has to be measured at the line side of the circuit breaker. To do this, an additional VSM must be connected and parameterized using p0150[0] and following. The voltage actual values of this VSM are displayed in r5461[0] and r5462[0]. The voltages converted over to the transformer secondary side are displayed in r5488[0, 1, 2].		

2 Parameters

2.2 List of parameters

For index 1:

Setting the rated primary voltage of the line transformer; an island grid with ALM in the grid droop mode (p5401) is connected to the secondary of this transformer. Typically, the transformer primary is connected to the grid or to another island grid through a circuit breaker.

The setting of this primary voltage and setting the device supply voltage (p0210) defines the island grid transformer ratio.

To synchronize the island grid voltage with the external grid, the external grid voltage must be measured. To do this, an additional VSM must be connected and parameterized using p0150[1] and following. The voltage actual values of this VSM are displayed in r5461[1] and r5462[1]. The voltages converted over to the transformer secondary side can be displayed in r5488[3, 4, 5]. To do this, the following BICO interconnections are acquired: p5487[2] = r5461[1], p5487[3] = r5462[1].

	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the magnetizing inductance of the supply transformer determined using the identification (p5480 = 11). The result of the identification must be entered into p5492.		
Dependency:	Refer to: p5480, p5492		
Notice:	Overmodulation (r0074 > 97 %) during the measurement as a result of an excessively low DC link voltage, can have a significant influence on the measurement result. A countermeasure, for example, can be to reduce the output voltage using p5494. The measurement result depends very strongly on precisely specifying the filter capacitance (p0221). When filter monitoring is active (p3678 > 0), the current measured values of the VSM (r3671, r3672) are used to identify the magnetizing inductance. Incorrect VSM measured values result in excessively high deviations when determining the magnetizing inductance.		
Note:	During identification, the value previously entered in p5492 is not effective. The display value is reset to 0 at POWER ON. VSM: Voltage Sensing Module		

p5492	Transformer magnetizing inductance / Transf L_H		
A_INF (Line transf), R_INF (Line transf)	Can be changed: C2(1), T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.10 [mH]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10000.00 [mH]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 250.00 [mH]
Description:	Sets the magnetizing inductance of the supply transformer.		
Dependency:	Refer to: r5491		
Notice:	If possible, p5492 should be set based on the data on the transformer rating plate. If the magnetizing inductance is not specified, then an estimate can be made using the formula specified below (instead of r0206, the transformer rated power is used). The magnetizing inductance should be used as basis for setting the DC component controller (p5437).		
Note:	The parameter is preset when selecting the power unit (p0201). In so doing, a transformer is assumed with the same power and with 2 % magnetizing current: $p5492 = r0206[0] / (3 * r0207[0] * r0207[0] * 2\% * 2\pi * p0211)$		

r5493.0...1	CO/BO: Line circuit breaker control signals / LSS control sig			
A_INF (Line transf), R_INF (Line transf)	Can be changed: - Data type: Unsigned16 P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 7990 Unit selection: - Expert list: 1 Factory setting -	
Description:	Display and connector output to control the circuit breaker for transformer magnetization and island grid synchronization.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	External precharging bypass contactor	Yes	No
	01	Island grid circuit breaker	Yes	No
Dependency:	Refer to: r0863, r3402			
Caution:	For bit 01: Without any additional control logic, the signal is not suitable to control the island grid circuit breaker. The signal only represents an enable signal to close the circuit breaker during the actual synchronization (r5499.5 = 1). For r5499.5 = 0, generally the following applies r5493.1 = 0.			
Note:	For bit 00: The signal is used to control the external bridging contactor in the precharging circuit. The external bridging contactor is closed if precharging is complete (r3402 > 5) and the circuit breaker has not been activated (r0863.1 = 0). For bit 01: The signal is used to control the circuit breaker between the island grid and the external grid. The signal is set to 1, if the island grid was successfully synchronized. In this case, the conditions for synchronization (frequency, amplitude, phase angle, p5586) are maintained.			

p5494[0...1]	Transformer magnetization scaling values / Traf mag scale		
A_INF (Line transf), R_INF (Line transf)	Can be changed: T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 10.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 150.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 100.0 [%] [1] 40.0 [%]
Description:	Sets the scaling values for the transformer magnetization.		
Index:	[0] = Voltage setpoint (90 - 100 %) [1] = Current limit (150 % deactivated)		

Dependency: Refer to: F06505

Note: For index 0:
If the precharging circuit of an application only creates a low DC link voltage, which is not sufficient to fully magnetize the transformer (modulation depth r0074 limited), then the target value for the magnetization can be reduced (p5494[0]).
When closing the line contactor, the residual magnetization required only causes a relatively low post charging current surge that is a generally permissible.

For index 1:
If, during transformer magnetization, the current limit is exceeded ($r0068 > p5494[1] * r0207$), then fault F06505 is output.

p5495 Transformer operating mode configuration / Transf op config

A_INF (Line transf), R_INF (Line transf)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the operating mode for the grid PLL in conjunction with the grid transformer function module (r0108.4 = 1).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Line PLL with transformer voltage	Yes	No	-

Note: VSM: Voltage Sensing Module

For bit 00:

When the bit is set, voltages (r5488[0, 1]) from the transformer model are used as input variable for the grid PLL (r3452 and following), which otherwise operates with the measured values of VSM1 (r3661, r3662).

This means, for example if the transformer properties are not known, a higher accuracy of the PLL can be achieved, and in turn the controller stability improved.

For booksize drive units, the following applies:

Before and during PLL synchronization ($r3402 \leq 7$), p5495.0 is only effective if operation with VSM is activated ($p3400.5 = 1$).

r5497[0...1] CO: Transformer secondary current / Transf I_second

A_INF (Line transf), R_INF (Line transf)	Can be changed: -	Calculated: -	Access level: 3

p5500 **Dynamic grid support configuration / Dyn grid config**

A_INF (Dyn. grid support), R_INF (Dyn. grid support)	Can be changed: T	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 7996, 7997
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 1000 1000 bin

Description: Sets the configuration for the dynamic grid support.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Deactivate characteristic	Yes	No	-
	01	Line voltage alpha/beta amplitudes	No	Yes	-
	02	Grid support mode in the event of asymmetry	No	Yes	-
	03	Grid support negative phase-sequence system calculation	Yes	No	-
	04	Grid support neg sequence tolerance threshold characteristic	No	Yes	-
	05	Deactivating grid support characteristic limiting	Yes	No	-
	06	Grid support limit apparent current short time average value	Yes	No	-
	07	Grid support dynamic current limits per phase	Yes	No	-
	08	Grid support Q mode while FRT	Yes	No	-
	09	Grid support Z mode while FRT	Yes	No	-
	10	Permit active power during non-symmetrical FRT	Yes	No	-

Dependency: Refer to: p5507, r5510, p5520

Note: For bit 00:

If p5500.0 = 0 the output value of the grid support characteristic is added to the control's reactive current setpoint.
 $r0075 = p3610 + p3611 + r3471 + r5510[0]$

If p5500.0 = 1 the dynamic reactive current setpoint p3611 is subtracted if dynamic grid support is active (p5502.1 = 1).

In this case, the following applies:

$r0075 = p3610 + r3471 + r5510[0]$

For bit 01:

Only active for p5500.3 = 0.

If p5500.1 = 0 the alpha and beta amplitudes of the line voltage, which were smoothed with p5507[2], are determined. The absolute value of the line voltage, calculated from these amplitudes, is used as input value for the characteristic for grid support. In the event of an asymmetrical line disturbance, oscillation of the reactive current setpoint (r5510) is prevented.

If p5500.1 = 1, the smoothed absolute value of the measured line voltage is used as the input value for the grid support characteristic. Smoothing is set with p5507[3].

For bit 02:

Only effective if p5500.1 = 0 and p5500.3 = 0.

If p5500.2 = 0, the maximum value from the alpha and beta line voltage amplitudes is used as the input value for the grid support characteristic. The reactive current setpoint (r5510) will, therefore, remain virtually constant even in the event of asymmetrical line disturbance. Power fluctuations in the DC link are reduced.

If p5500.2 = 1, the mean value from the alpha and beta line voltage amplitudes is used as the input value for the grid support characteristic.

For bit 03:

For p5500.3 = 0, no negative phase-sequence system current setpoint according to the characteristic is calculated. This means that the setpoints for the negative phase-sequence system current controller are also equal to 0 if the line supply is not symmetrical.

For p5500.3 = 1, for an unsymmetrical line supply voltage, a negative phase-sequence system current setpoint is calculated, which counteracts the voltage asymmetry and therefore supports the grid.

The negative phase-sequence system current is impressed using the negative phase-sequence system controller (p3636 and following).

The negative phase-sequence system controller is automatically activated and deactivated (the following applies, p3640.0 = p5500.3).

For bit 04:

Only active for p5500.3 = 1.

For p5500.4 = 0, a negative phase-sequence system current setpoint according to the characteristic p5505/p5506 is generated, if the difference between two line phase voltage amplitude is greater than p5509[8] and the amplitude of at least one line phase voltage exceeds the line tolerance range according to the characteristic.

For p5500.4 = 1, an already supporting negative phase-sequence system current is impressed according to the characteristic, if only the difference between two line phase voltage amplitudes is greater than p5509[9].

For bit 05:

For p5500.5 = 1, the limiting of the support reactive current is not active according to the characteristic p5505/p5506. Instead, the current limits p5506[1] and p5506[3] are effective after adding the supplementary reactive current setpoints p3610 and p3611.

For bit 06:

For p5500.6 = 1, the apparent current is limited to the smoothed apparent current (r0027) effective at the start of an FRT. During this line fault, this value of the apparent current limit is continually effective.

For bit 07:

Only effective for p5526.7 = 1 and p192.19 = 1

For p5500.7 = 1, for each phase, a tolerance band is generated around the current setpoint, which the current actual value does not leave.

For p5500.7 = 0, a tolerance band is generated based on the current setpoint amplitude. The current actual value for each phase can be within this tolerance band.

For bit 08:

Only active for p5500.3 = 1.

For p5500.8 = 1, during a line short-circuit (r5502.4 = 1) the active line infeed current is reduced to zero.

For p5500.8 = 0, during a line short circuit (r5502.4 = 1) the active line infeed current is increased within the effective current limits in order to achieve the highest possible active power. To support the line supply, the reactive current has priority over the active current.

For bit 09:

Only active for p5500.3 = 1.

For p5500.9 = 1, during a line short-circuit (r5502.4 = 1) the active line infeed current and the supporting reactive current are reduced to zero.

For p5500.9 = 0, the standard response of dynamic line support applies corresponding to p5500.8 = 0.

2 Parameters

2.2 List of parameters

For bit 10:

Only active for p5500.3 = 1.

For p5500.10 = 1, during an asymmetrical line short circuit (r5502.2 = 1) the active line infeed current is increased within the effective current limits in order to achieve the highest possible active power. To support the line supply, the reactive current has priority over the active current.

For p5500.10 = 0, during an asymmetrical line short-circuit (r5502.2 = 1) the active line infeed current is reduced to zero.

Description:

Sets the signal source to activate dynamic grid support.

BI: p5501 = 1 signal:

Activates dynamic grid support.

BI: p5501 = 0 signal:

Deactivates dynamic grid support.

Recommendation:

The smoothing time for the line PLL (p3458[1]) should be set to values higher than 20 ms so as to ensure stable operation even with significant dips in supply voltage.

Notice:

Dynamic grid support can only be activated if the power units have a gating unit with current limitation control (r0192.19 = 1 or r0192.30 = 1).

Note:

If grid support has been activated:

Line disturbance will trigger grid support in accordance with the set characteristic (p5505, p5506).

If grid support is deactivated:

Line disturbance will generate the standard response to phase failures on the part of the infeed for drive applications (see A06205).

Description:	Sets the voltage values for the characteristic for dynamic grid support. The characteristic points for positive and negative voltage deviation are set separately. The positive and the negative characteristic are each defined based on their starting and finishing points. Positive voltage deviation: - Starting point: p5505[0], p5506[0] - Finishing point: p5505[1], p5506[1] Negative voltage deviation: - Starting point: p5505[2], p5506[2] - Finishing point: p5505[3], p5506[3]		

2 Parameters

2.2 List of parameters

Index:	[0] = Characteristic positive starting point [1] = Characteristic positive finishing point [2] = Characteristic negative starting point [3] = Characteristic negative finishing point
Dependency:	Refer to: p5506
Note:	The voltage values refer to p0210. Dynamic grid support is not applied in the event of voltage deviations between the starting points of the positive and the negative characteristic (p5505[0], p5505[2]). For p5500.5 = 1, the following applies: The reactive current setpoint is limited according to the set characteristic. For p5500.5 = 0, the following applies: In the event of voltage deviations above the finishing points of the positive or the negative characteristic (p5505[1], p5505[3]), grid support is limited to the reactive current setpoint of the corresponding finishing point (p5506[1], p5506[3]).

p5506[0...3] Dynamic grid support characteristic reactive current setpoint / Dyn grid char I

A_INF (Dyn. grid support), R_INF (Dyn. grid support)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7996
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	500.0 [%]	[0] 20.0 [%] [1] 100.0 [%] [2] 20.0 [%] [3] 100.0 [%]

Description: Sets the reactive current setpoints for the characteristic for dynamic grid support.
For more information, see p5505.

Index: [0] = Characteristic positive starting point
[1] = Characteristic positive finishing point
[2] = Characteristic negative starting point
[3] = Characteristic negative finishing point

Dependency: Refer to: p5505, p5509

Notice: If the grid is not symmetrical (r5502.2 = 1), then the reactive current setpoint is multiplied by factor p5509[12].

Note: The values are referred to r0207.

p5507[0...4] Dynamic grid support times / Dyn grid times

A_INF (Dyn. grid support), R_INF (Dyn. grid support)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7996, 7998, 7999
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	10000.00 [ms]	[0] 500.00 [ms] [1] 2.00 [ms] [2] 20.00 [ms] [3] 4.00 [ms] [4] 8.00 [ms]

Description: Sets the time values for dynamic grid support.

Recommendation: For index 0:
For the run-on time p5507[0], the current limits parameterized for the dynamic grid support remain valid (e.g. p5509[11]). If a grid standard specifies that the active power is re-established faster, then we recommend that the run-on time is reduced (e.g. p5507[0] = 20 ms).

Index: [0] = Minimum time dynamic grid support
[1] = Minimum time line disturbance
[2] = Smoothing time alpha/beta
[3] = Smoothing time instantaneous value
[4] = Minimum time non-symmetrical grid fault

Dependency:	Refer to: p5500, p5509, p5529
Note:	<p>For index 0: Minimum time for continuing grid support in accordance with the characteristic once the line voltage has returned to the permissible tolerance range between the two starting points (p5505[0], p5505[2]).</p> <p>For index 1: Minimum time for line disturbance for the start of grid support in accordance with the characteristic. If the tolerance band between the two characteristic starting points is violated for at least this period of time, voltage control in accordance with characteristic will start up.</p> <p>For index 2: Smoothing time for the calculation of the alpha amplitude and the beta amplitude of the line voltage if p5500.1 = 0. An estimated value for the actual line voltage absolute value is calculated from the alpha and beta amplitudes and serves as the input value for the grid support characteristic. A smoothing time of less than a line period makes no sense. If the estimated absolute value deviates from the smoothed measured voltage absolute value by more than 25%, the smoothed measured value is used. This corresponds to a temporary automatic changeover from p5500.1 = 0 to p5500.1 = 1.</p> <p>For index 3: Smoothing time for the measured absolute value of the line voltage if p5500.1 = 1. The smoothed absolute value of the line voltage is used as the input value for the grid support characteristic. Setting p5507[3] = 0 deactivates smoothing.</p> <p>For index 4: Minimum time for a non-symmetrical line disturbance for the start of grid support in accordance with the characteristic p5506 and scaling factor p5509[12]. If the tolerance band between the two characteristic starting points is violated for at least this period of time, voltage control in accordance with characteristic will start up.</p>

p5508[0...1]	Dynamic grid support Vdc thresholds / Dyn grid Vdc thr		
A_INF (Dyn. grid support), R_INF (Dyn. grid support)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min -200 [V]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 0 [V]	Access level: 3 Func. diagram: 7997 Unit selection: - Expert list: 1 Factory setting [0] -50 [V] [1] 0 [V]
Description:	Sets the thresholds for the DC link voltage (Vdc) to reduce the reactive current setpoint from dynamic grid support. A value of 0 deactivates the particular intervention. For index 0: The value represents an offset to the maximum DC link voltage. For the intervention threshold, the following applies: r0297 + p5508[0] For index 1: The value represents an offset to the setpoint of the DC link voltage. The following applies to the intervention threshold: p3510 + p3511 + p5508[1]		
Index:	[0] = Offset overvoltage [1] = Offset setpoint voltage		
Dependency:	Refer to: r0297		
Note:	To avoid imminent shutdown due to a DC link overvoltage, the reactive current setpoint is reduced for dynamic grid support. Instead of this, the available converter current is used as the active current to reduce the DC link voltage.		

p5509[0...13] Dynamic grid support scaling values / Dyn grid scal			
A_INF (Dyn. grid support), R_INF (Dyn. grid support)	Can be changed: U, T Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 7996, 7997, 7998
	P-Group: Closed-loop control Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0.10 [%]	Max 200.00 [%]	Factory setting [0] 40.00 [%] [1] 40.00 [%] [2] 4.00 [%] [3] 1.00 [%] [4] 100.00 [%] [5] 100.00 [%] [6] 1.00 [%] [7] 0.10 [%] [8] 0.10 [%] [9] 10.00 [%] [10] 5.00 [%] [11] 100.00 [%] [12] 100.00 [%] [13] 3.00 [%]
Description:	Sets the scaling values for dynamic grid support.		
Recommendation:	<p>For index 0: If the reactive current setpoint increases to rapidly, at the start of a grid fault, this can result in DC link overvoltages. If possible, we then recommend p5509[0] = 5 ... 10 %.</p> <p>For index 1: In order to guarantee that the support reactive current is kept, even when the Vdc thresholds p5508 are reached, we recommend p5509[1] = 0.1 %.</p> <p>For index 7: If a support reactive current is also required for a non-symmetrical grid faults, then correspondingly p5509[7] must be set > 0.1 % (typically = 100 %).</p> <p>For index 8: If a support reactive current is also required for non-symmetrical grid faults, then we recommend p5509[8] > 20 % in order to reduce Vdc oscillation.</p> <p>For index 11: A value p5509[11] > 30 % can help avoid DC link overvoltages during grid faults.</p>		
Index:	<p>[0] = Ramp reactive current at the beginning/end of grid support [1] = Ramp reactive current when Vdc threshold is overshoot [2] = Ramp reactive current when Vdc threshold is undershot [3] = Hysteresis line voltage to exit grid support [4] = Reference voltage scaling [5] = Current limitation scaling [6] = Line voltage change for fast negative sequence calculation [7] = Line asymmetry current limit positive phase-sequence system [8] = Line asymmetry current limit negative phase-sequence system [9] = Line asymmetry minimum value for start of grid support [10] = Line asymmetry maximum value for end of grid support [11] = Active current limitation scaling [12] = Grid asymmetry grid support charac. reactive current scaling [13] = Grid voltage change for fast precontrol adaptation</p>		
Dependency:	Refer to: p5505, p5506, p5508		
Notice:	For index 5: For devices with r0192.19 = 0 (e.g., Active Line Module Booksize), the maximum apparent current limit can be set to p5509[5] = 80 %.		

- Note:**
- For index 0:
Change in the reactive current setpoint (% per ms) at the beginning and end of dynamic grid support.
This avoids sudden changes in the reactive current if the starting points for the line voltage (p5505[0], p5505[2]) are overshoot.
- For index 1:
Change in the reactive current setpoint (% per ms) when the maximum Vdc threshold (p5508) is overshoot.
To avoid beat phenomena, the following must apply: p5509[1] > p5509[2].
The reactive current ramp is deactivated with p5509[1] = 0.1 %. The reactive current required for dynamic support is also kept, even when the Vdc threshold is reached.
- For index 2:
Change in the reactive current setpoint (% per ms) when the maximum Vdc threshold (p5508) is undershoot.
To avoid beat phenomena, the following must apply: p5509[1] > p5509[2].
- For index 3:
Sets the hysteresis for the line voltage to exit grid support (as a percentage of the supply voltage p0210).
To exit grid support, the line voltage must be in the interval reduced by the hysteresis width (the interval is defined with the starting points p5505[0] and p5505[2] and the hysteresis width p5509[3]).
- For index 4:
Sets the scaling factor for the reference voltage for dynamic grid support (as a percentage of the supply voltage p0210).
As a result, the product of p0210 x p5509[4] is applied as the voltage zero.
- For index 5:
Sets the scaling factor for the permissible maximum converter current absolute value for dynamic grid support (as a percentage of the converter maximum current r0209).
Values higher than 100% will not be applied.
Values greater than 80 % can only be set, if the duration that can be set is less than or equal to 3 seconds for the short-circuit state p5528.
For Active Line Module Booksize, the setting value is limited to 80 %.
This value (independent of the grid voltage) is active if the "Dynamic grid support" function is active (p5501 = 1 signal)
- For index 6:
Only active for p5500.3 = 1.
Sets the percentage voltage change (as a percentage of p0210) from which value the calculated positive phase-sequence system and negative phase-sequence system amplitudes are quickly adapted. As a consequence, the grid is quickly supported when step-type faults occur.
- For index 7:
Only active for p5500.3 = 1.
Sets the maximum positive phase-sequence system reactive current absolute value to support the grid in the case of line asymmetry (r5502.2 = 1) as a percentage of r0207.
If a symmetrical support reactive current (positive phase-sequence system current), is also specified for non-symmetrical grid faults, then generally, p5509[7] should be set to = 100 %.
- For index 8:
Only active for p5500.3 = 1.
Sets the maximum negative phase-sequence system absolute current to support the grid in the case of line asymmetry (r5502.2 = 1) as a percentage of r0207.
For the case p5509[7] = 100 %, we recommend setting p5509[8] > 20 %.
- For index 9:
Only active for p5500.3 = 1.
Sets the minimum value of the voltage asymmetry to impress a negative phase-sequence system current for asymmetrical grid support.
For p5500.4 = 1, a negative phase-sequence system current is already impressed, if the voltage asymmetry exceeds the set value.
For p5500.4 = 0, in addition, for at least one of the phase voltages, the tolerance condition from the characteristic p5505 / p5506 must be exceeded.
- For index 10:
Only active for p5500.3 = 1.
Sets the maximum value of the voltage asymmetry to end asymmetrical grid support.
This means that parameters p5509[9] and p5509[10] define a hysteresis range.

2 Parameters

2.2 List of parameters

For index 11:

Only active for p5500.3 = 1.

Sets the scaling factor for the permissible negative active current value for dynamic grid support (as a percentage of the converter maximum current r0209).

For index 12:

Only active for p5500.3 = 1.

Sets the scaling factor for dynamic grid support for 2-phase grid dips. The gradient of the support characteristic p5505/p5506 is scaled using this factor if asymmetry (r5502.2=1) is present. The setting of p5509[0] is applicable for the transition ramp

For index 13:

Only active for p5500.3 = 1.

If the grid voltage dips by this voltage with respect to the value of p0210, then the voltage precontrol is quickly adapted based on the calculated positive phase-sequence system and negative phase-sequence system amplitudes.

Factory setting

10.0 [%]

100.0 [%]

20.0 [%]

Description: Sets the tolerance range for the second stage of the current limiting.

Only for internal Siemens use.

Index: [0] = Line parallel operation: No-load operation
[1] = Line parallel operation: Normal operation
[2] = Line parallel operation: Short-circuit operation

Dependency: Refer to: p5523

Note: The value refers to r0209.

If the current absolute value of a phase exceeds the tolerance threshold (p5523 + p5525), then the pulses in all of the line phases are inhibited for one cycle.

If the current actual value increases in spite of this second current limiting stage, then the system fault trips (F30001).

Description:	Sets the times for the operating states of the dynamic grid support.		
Index:	[0] = Minimum time in normal state [1] = Maximum time in short circuit state [2] = Maximum time PLL inhibit [3] = Wait time fast grid return [4] = Calibration time fast grid recovery		
Dependency:	Refer to: p5529 Refer to: A06849, F06850		
Note:	For index 0: Minimum time for operating state "Rated operation" for change to "No-load operation". For index 1: Permissible short-circuit duration. If the short circuit is not cleared within this time, then the system shuts down with fault F06850. Values greater than 3 s can only be set if the maximum device current when a short-circuit occurs p5509[5] is limited to 80 %. For index 2: During a grid short-circuit, the grid PLL is inhibited for a maximum of this time in order to prevent loss of orientation to the grid. For index 3: Sets a wait time for the decay of transient processes at the start of a short-circuit (r5502.4 = 1). After this time expires, a function to quickly identify grid recovery is activated (p5529[7]). For index 4: Sets the calibration time for the function to quickly identify line recovery. During this time (after wait time p5529[3] expires), automatically all of the actual current and voltage thresholds for the detection function are determined (see p5529[4, 5]).

-

-

0000 0010 0000 0011 bin

Description:

Sets the configuration for line monitoring.

Line monitoring is activated using binector input p5541 = 1 signal.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Voltage and frequency monitoring	Yes	No	-
01	AISL frequency shift technique	Yes	No	-
04	FRT voltage time characteristic	Yes	No	7999
05	FRT shutdown delayed	Yes	No	7999
07	FRT frequency-time characteristic	Yes	No	7999
09	Line synchronization voltage/frequency check	Yes	No	-

Dependency:

Refer to: p5541

Refer to: F06851

Note:

AISL: Anti Islanding

FRT: Fault Ride Through (riding through a grid fault)

HFRT: High Frequency Ride Through (riding through frequency increases)

HVRT: High Voltage Ride Through (riding through voltage increases)

LFRT: Low Frequency Ride Through (riding through frequency dips)

LVRT: Low Voltage Ride Through (riding through voltage dips)

For bit 00:

The monitoring thresholds of the voltage and frequency criteria are defined using the p5543 and p5544. If these thresholds are violated, then this is flagged in status word r5542 bits 6 to 9. If the violation remains during wait time p5545[0], then fault F06851 is output.

For bit 01:

The frequency shift technique actively changes the frequency that is fed in. For islanding formation this results in the permissible frequency bandwidth being violated. Shut down is realized via fault F06851.

For bit 04:

It is only possible to activate the FRT voltage-time characteristic (HVRT, LVRT) when the voltage and frequency monitoring are activated (p5540.0 = 1). The monitoring thresholds p5543 are deactivated. The voltage-time monitoring set using p5550 to p5554 applies (indicated in r5542 bits 10 and 11).

2 Parameters

2.2 List of parameters

For bit 05:

Sets the response after a voltage dip (LVRT).

0 = immediate shutdown.

1 = shutdown only after the time in p5545[2] has expired.

For bit 07:

It is only possible to activate the FRT frequency-time characteristic (HFRT, LFRT) when the voltage and frequency monitoring are activated (p5540.0 = 1). The monitoring thresholds p5544 are deactivated. The frequency-time monitoring set using p5555 to p5559 applies (indicated in r5542 bits 12 and 13).

For bit 09:

The additional voltage and frequency check is activated when switching on. To do this, before operation is enabled, a check is made against the limits p5543[2, 3] and p5544[2, 3], and the system waits until these limits are maintained (r3402 = 7 or r3402 = 12 when transformer magnetization is active (p5480 > 0)).

If the voltage and frequency limits are violated, then this is flagged in status word r5542 bits 6 to 9.

-20.0 [Hz]

Max
20.0 [Hz]

Factory setting
[0] 0.5 [Hz]
[1] -0.7 [Hz]
[2] 0.2 [Hz]

Description: Sets the frequency activation threshold for a line fault for the FRT line monitoring. The setting is realized as a difference to the rated frequency p0211.

Index:
[0] = HFRT frequency
[1] = LFRT frequency
[2] = Hysteresis freq

Dependency: This parameter is only effective for p5540.7 = 1.

Note: FRT: Fault Ride Through (riding through a line fault)

HFRT: High Frequency Ride Through

LFRT: Low Frequency Ride Through

The effective frequency thresholds, which when violated indicate a line fault, are obtained as follows:

Threshold HFRT = p0211 + p5555[0]

Threshold LFRT = p0211 - p5555[1]

When these thresholds are violated, status bit r5542.12 is set = 1 or r5542.13 is set = 1.

If, taking into account hysteresis, the limits are no longer violated, then these bits are reset.

Only positive values are permissible for the hysteresis (p5555[2]).

	Min	Max	Factory setting
	-	-	[0] 0
			[1] 0

Description: Sets the signal source for the voltage to be measured in alpha/beta coordinates.

Index: [0] = Alpha
[1] = Beta

Note: PLL2 is deactivated with input signal 0.

The following interconnection is practical for synchronizing an island grid to another grid (typically: public grid):

- the voltage of the island grid is measured using a VSM (r5461[0] and r5462[0]), which is connected in front of the circuit breaker between the island grid and the ALM.
- the voltage of the external grid is measured using another VSM (r5461[1] and r5462[1]), which is connected in front of the circuit breaker between the external grid and the island grid. The voltages (r5488[3, 4]) transformed to the ALM supply voltage are used as input variables for the PLL2.

p5580**Island grid black start mode / Black start mode**

A_INF (Line transf), R_INF (Line transf)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	0

Description: Sets the mode for the black start.

An island grid, which at the start has no voltage, can be established using this function. In this case, the ALM acts as the grid voltage source or as grid generator for the connected island grid.

Prerequisite:

The ALM function module "line droop control" and line droop operation (p5401) are activated.

If value = 0:

The black start is deactivated.

If value = 2:

At the next switch on, a black start is carried out. Here, the precondition is that the line voltage is close to zero (less than p5586[0]). Using the grid droop control, the grid voltage is increased up to the rated value using a ramp function.

If value = 3:

At the next switch on, a black start is carried out if the grid voltage is less than p5586[0]. If on the other hand, a grid is connected within the regular tolerances (p0281, p0282), then a regular switching-on operation is carried out with synchronization to the existing grid voltage.

If, in so doing, transformer magnetization is activated (p5480 = 1), then this is performed.

2 Parameters

2.2 List of parameters

Value:	0: Deactivated 2: Grid black start completed 3: Grid black start automatic
Notice:	A black start is only possible when the grid droop control (p5401) is activated. A black start is only possible when the transformer test operation mode is deactivated (p5480 <= 1). The use of feedback signal contacts from the circuit breaker between the Active Interface Module and the island grid is urgently recommended (p0860).
Note:	Precondition for establishing a voltage in an island grid is that adequate power is supplied into the ALM DC link (e.g. generator, photovoltaic) as well as control of the DC link voltage using this power generation system. The power requirement of the Island grid must not exceed the power of the generating system - even briefly. In order to avoid the high inrush currents, when the grid is being established, the voltage is ramped up to the rated value. At the end of the voltage ramp, the system changes over into regular grid droop operation. The ALM then operates as grid-generating voltage source using active and reactive power droop, also with other sources of power in the island grid, in a stable fashion. The other power units can then act as a current source to support the grid or as a voltage source to form a grid. As grid forming unit, then the other power units must also have a grid droop function. The circuit breaker between the Active Interface Module and the island grid is controlled via binector output r0863.1 Before closing this switch, it is checked as to whether the island grid is in a non-voltage condition. A possibly existing residual voltage in the Active Interface Module is automatically controlled down to zero.

Description:	Sets the time parameters for transformer magnetization, black start and island grid synchronization.
Index:	[0] = Black start voltage ramp duration [1] = Black start circuit breaker bounce time [2] = Black start maximum time [3] = Black start checking time [4] = Black start ramp smoothing time [5] = Synchronization circuit breaker bounce time [6] = Synchronization maximum time [7] = Synchronization check time [8] = Synchronization ramp smoothing time
Note:	For index 0: Sets the ramp time for the grid voltage. The ramp state r5482 = 107 is extended by the settling time, whose duration is obtained according to 3 * (p5427 + p5581[4]). For index 1: Sets the bounce time for the circuit breaker at the line side of the line transformer. An interruption-free connection between the line supply and the transformer is only guaranteed after the bounce time has expired. For index 2: Sets the permissible maximum time. If the maximum time elapses without the line being synchronized, fault F06503 is output. For index 3: Sets the test of time for the line voltage before closing the circuit breaker. The line voltage must be less than the threshold specified in p5586[0].

For index 4:

Sets the smoothing time constant for an additional PT1 filtering of the voltage ramp.

For index 5:

Sets the bounce time for the circuit breaker at the line side of the line transformer.

An interruption-free connection between the line supply and the transformer is only guaranteed after the bounce time has expired.

For index 6:

Sets the permissible maximum time.

If the maximum time elapses without the line being synchronized, fault F06504 is output.

For index 7:

Sets of the test time for the outer line supply, to which the system should be synchronized (voltage signals r5488[3, 4]). This line supply must maintain the regular tolerance for voltage and frequency (see p0281 ... p0285). The test is realized before synchronizing starts.

For index 8:

Sets the smoothing time constant for an additional PT1 filtering of the voltage and frequency ramp.

Description:

Display and connector output of the supplementary setpoints for the frequency and voltage control during island grid synchronization.

Index:

[0] = Setpoint ramp frequency
[1] = Setpoint ramp voltage

Notice:

In order to avoid equalization operations, after island synchronization has been completed, it is not permissible that supplementary setpoints for frequency and voltage are suddenly set to zero (as step function). This is the reason that after ending synchronization, the setpoints are held constant and reset with the trigger signal p5583[2] = 1.

In the same controller cycle, the signals for smoothed frequency (p5406[0]) and voltage (p5416[0]) are corrected by the corresponding absolute values!

The supplementary setpoints (r5582) are automatically reset when synchronization is canceled and when the grid droop (p5401) is deactivated with a change into regular closed-loop current control operation (with adaptation to the grid frequency).

Note:

In the default setting, the setpoints are connected with the unfiltered setpoint inputs (no-load frequency p5406[1], no-load voltage p5416[1]) of the grid droop. While synchronizing the island grid to an external grid, the amplitude, phase angle as well as the frequency of the island grid are adapted in this fashion.

The setpoints for synchronizing can also be used for synchronous voltage and frequency adaptation of additional power generating systems in the island grid.

Description:

Sets the signal sources for island grid synchronization.

Using the island grid synchronization function, an island grid can be synchronized with an external grid regarding frequency, phase angle and voltage amplitude.

After synchronization has been performed, a circuit breaker between the two grids can be closed (r5493.1).

Index:

[0] = Start
[1] = Circuit breaker feedback signal
[2] = Reset setpoints

2 Parameters

2.2 List of parameters

Notice: For index 1:
The feedback signal contact of the circuit breaker between the external grid and the island grid (in front of the grid transformer) must be connected in parallel via binector input p5583[1].
The feedback signal is required for a state change in the synchronization sequence control. This signal is not used to completely monitor the contactor (p0860 and following).

Note: In order to synchronize an island grid with an external grid, frequency, phase position and amplitude of the island grid must be changed in operation!
This assumes that the components of the island grid are suitable for these parameter changes and that the ALM is the only grid generator in the island grid.

For index 0:
Signal source for the start command to synchronize the island grid with an external grid.
The target values for the synchronization, are the output values of the PLL2 (r6311[1], r6313, r6314).
The PLL2 must be activated at the latest when synchronization starts (p5571, p5574).

For index 1:
Signal source for the feedback signal of the circuit breaker between the island grid and the external grid.

For index 2:
Signal source to reset the supplementary setpoints for voltage and frequency(r5582[0, 1]) after island grid synchronization has been completed.
At the same time as the reset command, the external cyclic supplementary setpoints (p5406[0], p5416[0]) must be appropriately adapted.

Note:	For index 0: Sets the limit for the line voltage amplitude (percentage of p0210), below which a black start is performed (for a grid that had no voltage, a grid is established). Maximum value: 10 % For index 1: Setting the maximum permissible frequency deviation (as a percentage of the rated frequency p0211) for aligning the line phase angle for island grid synchronization. For index 2: Setting the ramp speed for aligning the line frequency for island grid synchronization (as a percentage of the rated frequency p0211 per second). For index 3: Setting the ramp speed for aligning the line voltage for island grid synchronization (as a percentage of the rated voltage p0210 per second). For index 4: Setting the maximum permissible angular deviation (percentage of 360°) between the island grid and external grid for ending the phase angle ramp for island grid synchronization (condition for transitioning into the state r5482 = 203). For index 5: Setting the maximum permissible frequency deviation (percentage of p0211) between the island grid and external grid for ending the frequency ramp for island grid synchronization (condition for transitioning into the state r5482 = 202). For index 6: Setting the maximum permissible voltage deviation (percentage of p0210) between the island grid and external grid for ending the voltage ramp for island grid synchronization (condition for transitioning into the state r5482 = 202).			

p5588[0...2]		Grid droop control asymmetry times / Grid droop asym T		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.0 [ms]	1000000.0 [ms]	0.0 [ms]	
Description:	Sets the time values to control an asymmetrical voltage output.			
Index:	[0] = Asymmetry duration [1] = Duration of the start ramp [2] = Duration of the end ramp			

2 Parameters

2.2 List of parameters

Dependency: Refer to: p5589, p5590, p5591

Notice: The set time values cannot be precisely implemented, but only rounded off to interval limits corresponding to the current controller sampling time (p0115[0]).

Note: For index 0:
Sets the duration of the asymmetrical voltage output. After reaching the set duration, the asymmetry is exited and the regular symmetrical grid voltage droop becomes active again. To start an additional voltage asymmetry, a 0/1 edge of the activation signal p5591 is first required.
With p5588[0] = 0, the asymmetry set with p5590 is active without any time limit (up until it is deactivated with p5591 = 0).
For index 1:
Sets the duration of an initial ramp at the start of the asymmetrical voltage output.
When required, with a ramp, overvoltages in systems that are capable of oscillation can be prevented.
The ramp starts as soon as the trigger condition according to p5589 is fulfilled.
During the ramp, the voltage output is changed step-by-step from the regular symmetrical rotating voltage vector into the asymmetry set using p5590.
The ramp is part of the duration of the asymmetrical voltage output set using p5588[0].
With p5588[1] = 0, the ramp is deactivated and the voltage is immediately changed (step function) to the set asymmetry (p5590).
For index 2:
Sets the duration of an end ramp at the completion of the asymmetrical voltage output.
When required, with a ramp, overvoltages in systems that are capable of oscillation can be prevented.
The ramp starts as soon as the time for the asymmetrical voltage output has expired. As a consequence, the end ramp is not part of the duration set using p5588[0].
During the ramp, the voltage output is changed step-by-step from the asymmetry set using p5590 to the regular symmetrical rotating voltage vector.
With p5588[2] = 0, the ramp is deactivated and the voltage is immediately changed (step function) to the set asymmetry (p5590).

p5589

Grid droop control asymmetry angle / Grid droop asym A

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: U, T	Calculated: -	Access level: 4
Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
P-Group: Closed-loop control	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
-1.0 [°]	360.0 [°]	-1.0 [°]

Description: Sets the trigger angle for the asymmetrical voltage output.

Dependency: Refer to: p5590, p5591

Notice: The set angular values cannot be precisely implemented, but only rounded off to interval limits corresponding to the current controller sampling time (p0115[0]).

Example:

With p0115[0] = 0.25 ms and a 50 Hz line frequency, an angular resolution of $0.25 \text{ ms} * 50 \text{ Hz} * 360^\circ = 4.5^\circ$ is obtained.

Note: The function is activated using binector input p5591 = 0/1 signal.

After this function is activated, the start of asymmetry is delayed until the phase angle (r5412) reaches the value of p5589. This means that asymmetrical voltage changes can be implemented, which can be synchronized with the basic fundamental of the grid voltage - and that are reproducible.

With p5589 < 0°, asymmetry starts immediately with the 0/1 edge, and is therefore not synchronized with the grid voltage.

p5590[0...8]	CI: Grid droop control asymmetry setpoint signal sources / Gr_dr_asym s_src		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 5594[0] [1] 5594[1] [2] 5594[2] [3] 5594[3] [4] 5594[4] [5] 5594[5] [6] 5594[6] [7] 5594[7] [8] 5594[8]
Description:	<p>Sets the signal sources for scaling the individual phase and line voltages. This therefore allows asymmetrical voltage sources to be implemented (negative phase-sequence system voltage not equal to 0). The scaling of phase and line voltages can be freely combined. As a result of the 3-conductor connection, using the power unit, a zero system cannot be implemented as a result of the inherent operating principle. As a consequence, the sum of the output voltages is always 0. We recommend that p5594 is used for simple handling based on fixed values.</p>		
Index:	<p>[0] = Differential voltage factor RS [1] = Differential voltage factor ST [2] = Differential voltage factor TR [3] = Phase voltage factor R [4] = Phase voltage factor S [5] = Phase voltage factor T [6] = Zero system voltage factor R0 [7] = Zero system voltage factor S0 [8] = Zero system voltage factor T0</p>		
Dependency:	Refer to: p5415, p5416, p5594		
Danger:	<p>By scaling the phase voltages, phase short-circuits as well as overcontrol of the phase voltages (with overvoltages and high harmonic components) can be realized. This means that special care must be taken when using this function. The complete system with all of the connected components must be designed for the resulting current and voltage levels in order to rule out injury and material damage.</p>		
Notice:	<p>The voltage control of the grid droop (p5429) uses the symmetrical basic fundamental amplitude (positive phase-sequence system voltage) as control variable. Changing an individual phase voltage therefore results in an undesirable subsequent control of the positive phase sequences system voltage. In the case of an asymmetrical setpoint voltage due to p5590, we therefore recommend that p5426 = p5427 are set = 0. For the same reason, generally the modulation depth controller (r5433) must be deactivated. The setting value of indices 6, 7 and 8 together must add up to 300% in order to ensure that the zero system is completely subdivided. Otherwise, a remaining zero system is automatically distributed internally and symmetrically across all 3 phases.</p>		
Note:	<p>Using the grid droop function (p5415, p5416), depending on the reactive current actual value, a voltage amplitude is calculated for all 3 grid phases (positive phase-sequence system voltage, r5429). The amplitude of the individual grid phases is obtained by multiplying this positive phase-sequence system voltage by the associated scaling factors p5590[...]. The DC component control (p5436), the harmonic control (p5440) and the interventions when reaching the current limits (p5478) remain active, also for asymmetrical setpoint voltages. The setting p5590[...] = 1 deactivates the corresponding scaling (as a consequence, internally a value of 100% is active).</p>		

2 Parameters

2.2 List of parameters

For index 0, 1, 2:

Virtual three-phase voltage source in a delta connection.

Internally, the values are limited to the range 0 ... 100%.

Setpoint voltage amplitude line RS: $U_{RS} = r5429 * \text{root}(2) * p5590[0]$

Setpoint voltage amplitude phase ST: $U_{ST} = r5429 * \text{root}(2) * p5590[1]$

Setpoint voltage amplitude phase TR: $U_{TR} = r5429 * \text{root}(2) * p5590[2]$

The instantaneous voltages are internally adapted using a transformation matrix so that a zero system-free three-phase voltage system is obtained. For example, a short circuit between phases R and S can be directly emulated using p5590[0].

For index 3, 4, 5:

Virtual three-phase voltage source in a star connection.

Internally, the values are limited to the range 0 ... 150%.

Setpoint voltage amplitude phase R: $U_R = r5429 * \text{root}(2/3) * p5590[3]$

Setpoint voltage amplitude phase S: $U_S = r5429 * \text{root}(2/3) * p5590[4]$

Setpoint voltage amplitude phase T: $U_T = r5429 * \text{root}(2/3) * p5590[5]$

As the sum of the 3 sinusoidal voltages must be 0 at any particular instant in time, the average value of the instantaneous voltages are subtracted in each phase (i.e. the zero system components are evenly distributed across the 3 branches). For example, this is the reason that p5590[3] = 0% does not result in a DC voltage of 0 in phase R.

For indices 6, 7, 8:

Zero system distribution of the virtual three-phase voltage source in a star connection.

Internally, the values are limited to the range -300 ... 300 %.

Using these factors, it is defined with which component an existing zero system (instantaneous value $u_0 = (u_R + u_S + u_T)/3$) should be subtracted in the individual phases.

Zero system correction phase R: $u_{1R} = u_R - u_0 * p5590[6]$

Zero system correction phase S: $u_{1S} = u_S - u_0 * p5590[7]$

Zero system correction phase T: $u_{1T} = u_T - u_0 * p5590[8]$

In order to obtain a zero system-free U1 system, $p5590[6] + p5590[7] + p5590[8] = 300\%$. If this condition is violated, then the remaining zero system component is evenly distributed across all 3 branches.

Example:

The combination of p5590[3] = 0% and p5590[6] = 0% results in a voltage 0 in phase R. The phase voltage U_{ST} keeps its rated value, the sinusoidal curves of the two other differential voltages lie one above the other.

p5591		BI: Grid droop control asymmetry activation / Gr_droop asym act		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -

	Min	Max	Factory setting
	0	8	0
Description:	Sets the phase shift of the second system with respect to the first system for the Motor Module for a 12-pulse gating unit.		
Value:	0: Shift by +30 ° 1: Shift by -30 ° 2: Shift by 0 ° 3: Shift by +90 ° 4: Shift by -90 ° 5: Shift by +120 ° 6: Shift by -120 ° 7: Shift by +150 ° 8: Shift by -150 °		
Dependency:	Refer to: p7003		
Notice:	The parameter is only evaluated if p7003 = 2.		
Note:	For p6397 = 0 the following applies: The second systems leads for a positive direction of rotation. For p6397 = 1 the following applies: The second systems lags for a positive direction of rotation.		

p6420[0...1]	Phase shift input voltage VSM to the drive converter / INF U VSM/conv		
A_INF (Line transf), R_INF (Line transf)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-180.00 [°]	179.90 [°]	0.00 [°]
Description:	Sets the phase shift between the synchronizing voltage measured by the Voltage Sensing Module (VSM) and the actual drive converter input voltage.		
Index:	[0] = Supply transformer [1] = Island grid transformer		
Warning:	Switching-in with a significantly incorrectly parameterized offset angle (> 5 °) can cause a peak current intervention and / or triggering the crowbar thyristor.		
			
Caution:	If this parameter is changed in the "ready for operation" state and if a synchronizing voltage is already available at the VSM, under certain circumstances, a line supply fault can be signaled. When this occurs for the first time after changing the parameter, the fault can be ignored and acknowledged.		
			
Note:	This phase shift must be determined when commissioning the system. Example: If the converter input voltage (= secondary side voltage of the power transformer) lags the synchronizing voltage measured by the VSM by 30 °, then p6420 should be set to -30°.		

p6421[0...1]		Line supply voltage sensing gain adaptation / U_line gain		
A_INF (Line transf), R_INF (Line transf)	Can be changed: T	Calculated: -	Access level: 3

p6700[0...n] Voltage model angle smoothing / U_mod ang smooth

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	100 [ms]	0 [ms]

Description: Sets the smoothing of the flux orientation of the voltage model for a separately excited synchronous motor.

p6870[0...n] VSM offset voltage u1 - u2 / VSM offset u1 - u2

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100.000 [V]	100.000 [V]	0.000 [V]

Description: Offset voltage between phases L1 and L2 for the Voltage Sensing Module (VSM). The value is automatically determined with the drive switched-off and stationary when the offset calculation is enabled. The last determined value is saved if the offset calculation is inhibited. If the offset calculation is inhibited, then a fixed value can also be entered here.

Dependency: Refer to: p6903

Note: Offset calibration is only automatically activated if the resulting motor voltage is less than 1% of the rated voltage.

p6871[0...n] VSM offset voltage u2 - u3 / VSM offset u2 - u3

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100.000 [V]	100.000 [V]	0.000 [V]

Description: Offset voltage between phases L2 and L3 for the Voltage Sensing Module (VSM). The value is automatically determined with the drive switched-off and stationary when the offset calculation is enabled. The last determined value is saved if the offset calculation is inhibited. If the offset calculation is inhibited, then a fixed value can also be entered here.

Dependency: Refer to: p6903

Note: Offset calibration is only automatically activated if the resulting motor voltage is less than 1% of the rated voltage.

p6903[0...n] Voltage actual values, offset mode / U_ActVal offs mode

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: p0150	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	1

Description: Sets the offset mode for voltage actual value sensing.

When the mode is enabled (p6903 = 0), for a pulse inhibit for stator and excitation and zero speed, the offset calibration is automatically started.

Offset calibration is inhibited when the mode is inhibited (p6903 = 1). The values last determined in p6870 and p6871 are saved. However, they can also be overwritten by a fixed value.

Value: 0: Offset calculation enabled
1: Offset calculation inhibited

Dependency: Refer to: p6870, p6871

Note: Offset mode can only be set for actual value sensing functions that are available in the hardware.

Description:	Setting to parameterize the recorder. The recorder supplies up to 64 internal variables (depending on the parameterization). The maximum recording time is 2000 ms. The variables are acquired in the current controller sampling time – and a pretrigger can be set. The values can then be acyclically written to the memory card. The development and system test departments have the software necessary to decode the content.			
Index:	[0] = Enable [1] = Recording time [2] = Pre-trigger time [3] = Output message [4] = Recording factor			
Dependency:	Refer to: A49998			

2 Parameters

2.2 List of parameters

Note: For index [0]:
 Enables or disables the function.
 p6999[0] = 0
 Inhibits the function.
 p6999[0] = 1
 Enables the function.

For index [1]:
 Sets the recording time, [ms].
 A maximum of 8000 measuring points can be recorded across all drive objects. 1 measuring point is created in one current controller sampling time.
 Example:
 The "Recorder" function module is activated on 4 drive objects. The current controller sampling time (p0115[0]) is 250 μ s.
 --> every drive object can record a maximum of $8000/4 = 2000$ measuring points.
 --> the recording time that can be realized is $2000 * 0.250 \text{ ms} = 500 \text{ ms}$.

Note:
 - the recording time that can be realized is displayed in r6991[1].
 - if the recording time is set too long, then it is automatically reduced to what can be realized.

For index [2]:
 Sets the pretrigger time, [ms].
 This time is included in the recording time and cannot be longer than the recording time p6999[1].

Note:
 - when the recording time is automatically reduced, the pretrigger time is correspondingly reduced as well.
 - the pretrigger time that can be realized is displayed in r6991[2].

For index [3]:
 Enables or disables the output of message A4998 when the trigger event is triggered.

For index [4]:
 p6999[4] = n, n = 0 ... 4
 Recording with the factor, which extends the record time p6999[1] and the pre-trigger time p6999[2] 2^n times, and reduces the number of signals 2^n times.
 Example:
 Number of drive objects = 1, p0115[0] = 250 μ s, p6999[1] = 2000, p6999[2] = 1000, p6999[4] = 4
 --> recording time: $2000 \text{ ms} * 2^4 = 32 \text{ s}$, pre-trigger time: $1000 \text{ ms} * 2^4 = 16 \text{ s}$, number of signals $64/16 = 4$.
 When setting p6999[4] to 0, the results are as follows:
 --> recording time: 2000 ms, pre-trigger time: 1000 ms, number of signals: 64

VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: T Data type: Integer16 P-Group: Modulation Not for motor type: - Min 0	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Setting to enable the power units for a parallel connection.		
Value:	0: Deactivated 1: Activated		
Dependency:	Refer to: r7000		
Caution:	For a parallel connection, the following applies: When deactivating individual power units using this parameter, it is not permissible that the power units of the parallel connection involved are connected. Infeed units should be disconnected from the line supply (for example, using a contactor). Motor feeder cables should be disconnected. In addition, defective power units should be disconnected from the DC link.		
			
Note:	For motors with separate winding systems (p7003 = 1) it is not possible to inhibit an individual power unit. p7001 is automatically reset if a power unit is deactivated via p0125 or p0895.		
r7002[0...n]	CO: Par_circuit status power units / Status PU		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: Integer16 P-Group: Modulation Not for motor type: - Min 0	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Display and connector output for the status of the power units in a parallel connection.		
Value:	0: Pulses inhibited 1: Pulses enabled		
Dependency:	Refer to: r7000, p7001		
p7003	Par_circuit winding system / Wind_sys		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel)	Can be changed: C2(2) Data type: Integer16 P-Group: Converter Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Specifies the motor winding system when power units are connected in parallel.		
Value:	0: One-winding system 1: Several separate winding systems or motors 2: Two separate offset winding systems		
Dependency:	For p7003 = 2: In order to permit separate, offset winding systems, wobulation must first be deactivated (p1810.2 = 0). The magnitude and direction of the offset is parameterized in p6397. When exiting commissioning, the circulating current control is automatically deactivated (p7035 = 0), and the compensation of the valve interlocking times is replaced by the appropriate stator resistance adaptation (p1780.7 = 1). Refer to: p1802, p6397		

2 Parameters

2.2 List of parameters

Note: For p7003 = 0:

- the motor data identification routine (p1910) determines the stator resistance and the cable resistance. The cable resistance of an individual Motor Module is entered into p0352.
- the current symmetrizing is activated as standard after the motor data identification routine (p7035 = 1).
- individual Motor Modules can be activated and deactivated (p7001).

For p7003 = 1, 2:

- the motor data identification routine (p1910) determines the total (overall) resistance. The cable resistance is not measured, but instead, entered as a component of the total resistance (refer to p0352).
- all Motor Modules are activated. It is not possible to deactivate a Motor Module.

p7010	Par_circuit current asymmetry alarm threshold / i_asym A thresh		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 2 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max 100 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 20 [%]
Description:	Sets the alarm threshold to detect current asymmetry in the parallel circuit configuration. The deviation between the measured values and average value is evaluated. The specified value is referred to the rated power unit current (p7251[0]).		
Dependency:	Refer to: r7251 Refer to: A05052		

p7011	Par_circuit DC link voltage asymmetry alarm threshold / Vdc_dissym A thrsh		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 2 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max 100 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10 [%]
Description:	Sets the alarm threshold to detect asymmetry of the DC link voltages in the parallel circuit configuration. The deviation between the measured values and average value is evaluated. The specified value is referred to the rated link voltage.		
Dependency:	Refer to: A05053		

p7015	Par_circuit holding brake power unit data set / Brake PDS		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel)	Can be changed: T Data type: Integer16 P-Group: Converter Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 99	Access level: 3 Func. diagram: 2701, 2814 Unit selection: - Expert list: 1 Factory setting 99
Description:	Sets the power unit data set for a parallel connection via which the holding brake is controlled.		
Value:	0: Power unit data set 0 1: Power unit data set 1 2: Power unit data set 2 3: Power unit data set 3 4: Power unit data set 4 5: Power unit data set 5 6: Power unit data set 6 7: Power unit data set 7 99: No holding brake connected		
Dependency:	Refer to: p0120, p0121		

Note: PDS: Power unit Data Set
 Example:
 3 power units are connected in parallel and the holding brake is connected to power unit 1.
 p0120 = 3
 p0121[0] = component number of power unit 0
 p0121[1] = component number of power unit 1 (with holding brake)
 p0121[2] = component number of power unit 2
 --> p7015 = 1

r7020[0...n]	CO: Par_circuit deviation current in phase U / Phase U curr dev		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]

Description: Displays the deviation between the measured current actual value of phase U and the average value as peak value. The maximum deviation from the average value is displayed in r7025.

Dependency: Refer to: r7021, r7022, r7025

r7021[0...n]	CO: Par_circuit deviation current in phase V / Phase V curr dev		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]

Description: Displays the deviation between the measured current actual value of phase V and the average value as peak value. The maximum deviation from the average value is displayed in r7026.

Dependency: Refer to: r7020, r7022, r7026

r7022[0...n]	CO: Par_circuit deviation current in phase W / Phase W curr dev		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]

Description: Displays the deviation between the measured current actual value of phase W and the average value as peak value. The maximum deviation from the average value is displayed in r7027.

Dependency: Refer to: r7020, r7021, r7027

2 Parameters

2.2 List of parameters

r7025	CO: Par_circuit max. deviation currents phase U / Phase U Max i_dev		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: - Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the maximum absolute deviation of the measured current actual values of phase U from the average value as peak value. The deviation of the individual currents from the average value is displayed in r7020.		
Dependency:	Refer to: r7020, r7026, r7027 Refer to: A05052		
<hr/>			
r7026	CO: Par_circuit max. deviation currents phase V / Phase V Max i_dev		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: - Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the maximum absolute deviation of the measured current actual values of phase V from the average value as peak value. The deviation of the individual currents from the average value is displayed in r7021.		
Dependency:	Refer to: r7021, r7025, r7027 Refer to: A05052		
<hr/>			
r7027	CO: Par_circuit max. deviation currents phase W / Phase W Max i_dev		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: - Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the maximum absolute deviation of the measured current actual values of phase W from the average value as peak value. The deviation of the individual currents from the average value is displayed in r7022.		
Dependency:	Refer to: r7022, r7025, r7026 Refer to: A05052		
<hr/>			
r7030[0...n]	CO: Par_circuit DC link voltage deviation / Vdc deviation		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [V]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [V]
Description:	Displays the deviation of the measured DC link voltage from the average value. The maximum deviation from the average value is displayed in r7031.		
Dependency:	Refer to: r7031		

r7031	CO: Par_circuit DC link voltage maximum deviation / Vdc deviation max.		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [V]	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [V]
Description:	Displays the maximum absolute deviation of the measured DC link voltage from the average value. The deviation of the individual voltages from the average value is displayed in r7030.		
Dependency:	Refer to: r7030 Refer to: A05053		
p7035[0...n]	Par_circuit circulating current control operating mode / I_cct_ctrl mode		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel)	Can be changed: U, T Data type: Integer16 P-Group: Modulation Not for motor type: - Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the operating mode of the circulating current control. The circulating current control ensures symmetrical distribution of the total currents to the individual converters.		
Value:	0: Circulating current control deactivated 1: Circulating current control activated		
Dependency:	Circulating current control is not possible for separate, offset motor winding systems (p7003 = 2).		
p7035	Infeed par_circuit circulating current control operating mode / I_cct_ctrl mode		
A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: U, T Data type: Integer16 P-Group: Modulation Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the operating mode of the circulating current control. The circulating current control ensures symmetrical distribution of the total currents to the individual converters.		
Value:	0: Circulating current control deactivated 1: Circulating current control activated		
p7036[0...n]	Par_circuit circulating current control proportional gain / Circ_I Kp		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 0.00000 [ohm]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 200.00000 [ohm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00000 [ohm]
Description:	Sets the proportional gain for the circulating current controller. The parameter is pre-set to the cable resistance.		

2 Parameters

2.2 List of parameters

p7036	Infeed par_cct circulating current controller proportional gain / Circ_I Kp		
A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 0.00000 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000.00000 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00000 [%]
Description:	Sets the scaled proportional gain for the circulating current controller.		
Note:	A value of 100 % corresponds to the basic setting derived from loop control parameters (p3421, p3622).		
p7037[0...n]	Par_circuit circulating current control integral time / I_circ Tn		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 2.0	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.0	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 4.0
Description:	Sets the integral time of the circulating current controller. The parameter is referred to the current controller sampling time (p0115[0]).		
Dependency:	Refer to: p0115		
Note:	Using p7037 = 1000, the integral component is deactivated (held in operation). This is the preferred setting for operation with separate motor winding system.		
p7037	Infeed par_cct circulating current control integral time / I_circ Tn		
A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 0.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100000.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the scaled integral time of the circulating current controller.		
Note:	A value of 100 % corresponds to the basic setting derived from the current controller sampling time p0115[0]. The integral component of the controller is deactivated with p7037 = 0.		
p7038[0...n]	Par_circuit circulating current control limit / I_circ limit		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 1 [%]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 50 [%]
Description:	Sets the limit of the circulating current controller output values. The parameter is, depending on the phase, referred to the valve lockout times (p1828, p1829, p1830).		

p7038	Infeed par_circuit circulating current control limit / I_circ limit		
A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 1 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100 [%]
Description:	Sets the limit of the circulating current controller output values. The parameter is, depending on the phase, referred to the valve lockout times (p1828, p1829, p1830).		
p7040[0...n]	Par_circuit correction valve lockout time phase U / Comp t_lockout U		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min -1000000.00 [μs]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 1000000.00 [μs]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [μs]
Description:	For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase U (p1828). The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.		
Dependency:	Refer to: p1828		
p7042[0...n]	Par_circuit correction valve lockout time phase V / Comp t_lockout V		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min -1000000.00 [μs]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 1000000.00 [μs]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [μs]
Description:	For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase V (p1829). The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.		
Dependency:	Refer to: p1829		
p7044[0...n]	Par_circuit correction valve lockout time phase W / Comp t_lockout W		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min -1000000.00 [μs]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 1000000.00 [μs]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [μs]
Description:	For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase W (p1830). The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.		
Dependency:	Refer to: p1830

r7050[0...n]	Par_circuit circulating current phase U / Circ_I_phase U		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the circulating current of phase U as peak value.		
r7051[0...n]	Par_circuit circulating current phase V / Circ_I_phase V		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the circulating current of phase V as peak value.		
r7052[0...n]	Par_circuit circulating current phase W / Circ_I_phase W		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the circulating current of phase W as peak value.		
r7100[0...99]	Par_circuit ring buffer fault/alarm code / Fault/alarm code		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module). Displays the fault/alarm code.		
Dependency:	Refer to: r7101, r7102, r7103		
Note:	The last fault case that occurred is documented in index 0. The parameter is reset to 0 at POWER ON.		

r7101[0...99]	Par_circuit ring buffer data set number / Ring buffer Ds_no		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module). p7101 < 100: Displays the Power unit Data Set number (PDS). p7101 >= 100: Displays the Voltage Sensing Module Data Set number (VSMDS)		
Dependency:	Refer to: r7100, r7102, r7103		
Note:	The last fault case that occurred is documented in index 0. The parameter is reset to 0 at POWER ON.		

r7102[0...99]	Par_circuit ring buffer fault/alarm received / F/A received		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module). Displays the relative system runtime when the fault or alarm occurred.		
Dependency:	Refer to: r7100, r7101, r7103		
Note:	The last fault case that occurred is documented in index 0. The parameter is reset to 0 at POWER ON.		

r7103[0...99]	Par_circuit ring buffer fault/alarm gone / F/A gone		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module). Displays the relative system runtime when the fault or alarm was withdrawn.		
Dependency:	Refer to: r7100, r7101, r7102		
Note:	The last fault case that occurred is documented in index 0. The parameter is reset to 0 at POWER ON.		

2 Parameters

2.2 List of parameters

r7200[0...n]	Par_circuit power unit overload I2t / PU overload I2t		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [%]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: PERCENT Max - [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the overload of the particular power unit in a parallel circuit configuration calculated using the I2t function. The maximum value of all power units is displayed in r0036.		
r7201[0...n]	CO: Par_circuit power unit temperatures max. inverter / PU temp max inv		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]
Description:	Displays the maximum inverter temperature in the power unit for a parallel circuit configuration. The maximum value of all power units is displayed in r0037[0].		
r7202[0...n]	Par_circuit power unit temperatures max. depletion layer / PU TempMaxDepLayer		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]
Description:	Displays the maximum depletion layer temperature in the power unit for a parallel circuit configuration. The maximum value of all power units is displayed in r0037[1].		
r7203[0...n]	CO: Par_circuit power unit temperatures max. rectifier / PU temp max rect		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]
Description:	Displays the maximum rectifier temperature in the power unit for a parallel circuit configuration. The maximum value of all power units is displayed in r0037[2].		

r7204[0...n]	CO: Par_circuit power unit temperatures air intake / PU temp air intake		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays the air intake temperature in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[3].

r7205[0...n]	Par_circuit power unit temperatures electronics / PU temp electr		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays the temperature of the electronics module in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[4].

r7206[0...n]	Par_circuit power unit temperatures inverter 1 / PU temp inv 1		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays the inverter temperature 1 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[5].

r7207[0...n]	Par_circuit power unit temperatures inverter 2 / PU temp inv 2		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays the inverter temperature 2 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[6].

2 Parameters

2.2 List of parameters

r7208[0...n]	Par_circuit power unit temperatures inverter 3 / PU temp inv 3		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays the inverter temperature 3 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[7].

r7209[0...n]	Par_circuit power unit temperatures inverter 4 / PU temp inv 4		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays the inverter temperature 4 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[8].

r7210[0...n]	Par_circuit power unit temperatures inverter 5 / PU temp inv 5		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays the inverter temperature 5 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[9].

r7211[0...n]	Par_circuit power unit temperatures inverter 6 / PU temp inv 6		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays the inverter temperature 6 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[10].

r7212[0...n]	Par_circuit power unit temperatures inverter 1 / PU temp rect 1		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays rectifier temperature 1 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[11].

r7213[0...n]	Par_circuit power unit temperatures inverter 2 / PU temp rect 2		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays rectifier temperature 2 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[12].

r7214[0...n]	Par_circuit power unit temperatures depletion layer 1 / PU temp DepLayer 1		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays depletion layer temperature 1 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[13].

r7215[0...n]	Par_circuit power unit temperatures depletion layer 2 / PU temp DepLayer 2		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays depletion layer temperature 2 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[14].

2 Parameters

2.2 List of parameters

r7216[0...n]	Par_circuit power unit temperatures depletion layer 3 / PU temp DepLayer 3		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays depletion layer temperature 3 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[15].

r7217[0...n]	Par_circuit power unit temperatures depletion layer 4 / PU temp DepLayer 4		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays depletion layer temperature 4 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[16].

r7218[0...n]	Par_circuit power unit temperatures depletion layer 5 / PU temp DepLayer 5		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays depletion layer temperature 5 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[17].

r7219[0...n]	Par_circuit power unit temperatures depletion layer 6 / PU temp DepLayer 6		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel), B_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: PDS, p0120 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]

Description: Displays depletion layer temperature 6 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[18].

r7220[0...n]	CO: Par_circuit drive output current maximum / Drv I_outp max		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Displays the maximum output current of the power unit. The minimum value of all power units multiplied by the number of Motor Modules is displayed in r0067.		

r7220[0...n]	Infeed par_circuit absolute current value motoring permissible / INF I_abs mot perm		
A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Displays the currently permissible line-side absolute current when motoring. The minimum value of all power units multiplied by the number of Motor Modules is displayed in r0067[0].		

r7221[0...n]	Infeed par_circuit absolute current regenerating permissible / INF I_absRegenPerm		
A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Displays the currently permissible line-side absolute regenerative current. The minimum value of all power units multiplied by the number of Motor Modules is displayed in r0067[1].		

r7222[0...n]	CO: Par_circuit absolute current actual value / I_act abs val		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays actual absolute current. The summed value of all power units is displayed in r0068.		

r7223[0...n]	CO: Par_circuit phase current actual value phase U / I_phase U act val		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the measured actual value of phase U as peak value. The summed value of all power units is displayed in r0069[0].		

2 Parameters

2.2 List of parameters

r7224[0...n]	CO: Par_circuit phase current actual value phase V / I_phase V act val		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]

Description: Displays the measured actual value of phase V as peak value.
The summed value of all power units is displayed in r0069[1].

r7225[0...n]	CO: Par_circuit phase current actual value phase W / I_phase W act val		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]

Description: Displays the measured actual value of phase W as peak value.
The summed value of all power units is displayed in r0069[2].

r7226[0...n]	CO: Par_circuit phase current actual value phase U offset / I_phase U offset		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]

Description: Displays the measured offset of phase U as peak value.
The summed value of all power units is displayed in r0069[3].

r7227[0...n]	CO: Par_circuit phase current actual value phase V offset / I_phase V offset		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]

Description: Displays the measured offset of phase V as peak value.
The summed value of all power units is displayed in r0069[4].

r7228[0...n]	CO: Par_circuit phase current actual value phase W offset / I_phase W offset		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel), A_INF (Parallel), S_INF (Parallel), R_INF (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: PDS, p0120 Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]

Description: Displays the measured offset of phase W as peak value.
